**Subject: Additional RUC Recommendations for Consideration for Final Rule on the 2012 Medicare Physician Payment Schedule**

The American Medical Association (AMA)/Specialty Society RVS Update Committee (RUC) met September 22-24, 2011 to review specialty society data and develop relative value recommendations for individual physician services. A significant portion of the agenda was devoted to issues that relate to CPT 2013 or newly identified potentially misvalued services. These items will be submitted to CMS in the future. However, given the immediate urgency for items related to 2012, we submit these recommendations to you at this time. In addition, the RUC recommends immediate consideration of certain methodological and policy changes for 2012. The RUC submission includes the following issues for consideration by the Centers for Medicare and Medicaid Services (CMS):

- Chronic Care Coordination Workgroup Implementation and Initial Recommendations
- Separate Payment for High Cost Medical Supplies (Balloon Sinuplasty for 2012)
- Kyphoplasty – Non-Facility Practice Expense Input Recommendations
- Molecular Pathology – CPT 2012 Tier 1 and Tier II Recommendations
- Pacemaker or Pacing Cardioverter-Defibrillator – 2012 Bundled CPT Code Recommendations
- Psychoanalysis – 4<sup>th</sup> Five-Year Review Recommendation
- Update on Review of RUC's Multi-Specialty Points of Comparison (MPC) Codes
- Positioning Time in Non-Manipulation Fracture Codes

***Chronic Care Coordination Workgroup – Implementation and Initial Recommendations***

Immediately following our meeting with you on July 29, 2011, the AMA worked to create a joint workgroup of CPT Editorial Panel and RUC members to consider specific alternatives to a re-review of the valuation of 91 Evaluation and Management (E/M) services. The workgroup, named the Chronic Care Coordination Workgroup (C3W), will provide strategic direction to the CPT and RUC in response to the CMS request to address the adequacy of coding and valuation of care coordination services and management of chronic diseases. The following individuals will participate on the C3W:

Name	CPT/RUC	Position within Committee	Specialty
Al Bothe, MD	CPT & RUC	CPT Liaison to the RUC	General Surgery
Katherine Bradley, RN, PhD	HCPAC	Former HCPAC Member	Nursing
Kenneth Brin, MD	CPT	Vice Chairman	Cardiology
Jane Dillon, MD	RUC	Alternate Member	Otolaryngology
Richard Duszak, MD	CPT	Member	Radiology
David Ellington, MD	CPT	Member	Family Medicine
David Hitzeman, DO	RUC	Member, Vice Chair of Administrative Subcommittee	Osteopathic Medicine
Peter Hollmann, MD	CPT	Chairperson	Geriatrics
Doug Leahy, MD	RUC	Alternate Member	Internal Medicine
Barbara Levy, MD	RUC	Chairperson	Gynecology
Chad Rubin, MD	RUC	Alternate Member	General Surgery
Peter Smith, MD	RUC	Member	Thoracic Surgery
Arthur Traugott, MD	RUC	Vice Chairman	Psychiatry
Ken Simon, MD Edith Hambrick, MD		CMS Observers (Doctor Simon is a voting member of CPT Editorial Panel)	

The C3W has convened several conference calls and convened one face-to-face meeting. We were particularly pleased that CMS staff and medical officers participated in these meetings. It is imperative that the Workgroup understand the limitations and obstacles that preclude the Agency from recognizing separate payment for existing care coordination CPT codes, particularly those already assigned values and ready for immediate implementation. An immediate solution to incentivize care coordination is required, and it is, therefore, critical that medicine and CMS work closely together to ensure consensus and effective implementation.

We are pleased to announce that the C3W has reached consensus that the CPT Editorial Panel and the RUC should work toward coding and payment solutions that promote care coordination and team based care. The Workgroup also recognizes that a number of services, already described in CPT and valued by the RUC, provide a short-term opportunity to begin payment for better care coordination. The RUC does not fully understand all of the CMS rationale precluding payment

for these services in the past. However, if costs were of concern, CMS should consider the current environment in a reassessment. Not only will payment for these services save Medicare money in unnecessary office and emergency room visits, potential savings in Medicare Parts A and D will also offset upfront payment for non-face-to-face-services. In addition, the RUC's work on misvalued codes provides an opportunity to offset the costs, negating any impact to the Medicare conversion factor.

**The RUC urges CMS to consider immediate implementation of the previous RUC recommendations for the following services on January 1, 2012:**

*Anticoagulant Management (CPT Codes 99363 and 99364)*

In 2007, the CPT Editorial Panel created the following CPT codes to describe anticoagulant management:

*99363 Anticoagulant management for an outpatient taking warfarin, physician review and interpretation of International Normalized Ratio (INR) testing, patient instructions, dosage adjustment (as needed), and ordering of additional tests; initial 90 days of therapy (must include a minimum of 8 INR measurements)*

*99364 Anticoagulant management for an outpatient taking warfarin, physician review and interpretation of International Normalized Ratio (INR) testing, patient instructions, dosage adjustment (as needed), and ordering of additional tests; each subsequent 90 days of therapy (must include a minimum of 3 INR measurements)*

CMS has published relative values for these codes, based on information provided by the RUC, which would result in nominal payment (\$41 per month for initial 90 days and \$14 per month for subsequent 90 days of management). However, CMS has to date considered these services "bundled" into E/M and not separately paid.

**Immediate implementation of CPT codes 99363 and 99364 Anticoagulant management would signal that CMS is serious about providing incentives for care coordination.** These services are also cost effective, eliminating unnecessary face-to-face physician services which are required as a substitute to a more common sense strategy to pay for the management of these patients. As stated in our earlier recommendations (and included in the attachments):

*In 2001, the Centers for Medicare and Medicaid Services (CMS) stated that the standard of care for anticoagulant services was suboptimal and the current payment policy requires the physician to have the beneficiary schedule an office visit to discuss prothrombin time tests results and necessary adjustments to receive separate payment. Although it is clinically optimal for a physician to discuss results with a patient and make an adjustment during a face-to-face encounter under some circumstances, physicians often engage in these activities outside of a face-to-face encounter with the patient. The CPT Editorial Panel agreed with the specialty that bundling this post service time into the payment for the visit is unfair when physicians are managing patients on long-term anticoagulants. In addition, the Panel believed that CMS policy provides inadequate avenues for physicians to be paid for managing patients on long term anticoagulant and may contribute to the problem of underutilization of anticoagulant drugs that has adverse effects on the health of patients. Failure to*

*receive anticoagulant drugs when indicated can increase patient risk of thrombosis and embolism, and under or over anticoagulation can increase patient risk of bleeding. The CPT Editorial Panel discussed the issue at its February 2006 meeting and created two new codes to allow the reporting of anticoagulant management services. To ensure appropriate utilization of these codes, the Panel added minimum International Normalized Ratio (INR) measurements, eight for the initial anticoagulant management and three for subsequent therapy, and stated that this service cannot also be reported with another Evaluation and Management (E/M) code.*

While unfortunate that CMS elected to deny separate payment of this important bundled service in the past, there is a new opportunity to consider implementation. In their comments related to the July 19 Proposed Rule on the 2012 Medicare Physician Payment Schedule, specialty societies ranging from primary care (American College of Physicians, American Academy of Family Physicians and American Geriatrics Society) to internal medicine subspecialties (Infectious Disease Society of America) to surgery (American College of Surgeons and American Academy of Otolaryngology – Head and Neck Surgery) united in their support of separate payment for anticoagulant management.

This proposal has the support of multiple specialty societies, and has many features that are completely aligned with the stated goals of CMS as it transforms the payment system into a vehicle for quality improvement and cost savings. There is ample evidence that better anticoagulation management can reduce thromboembolic and bleeding events that are devastating to Medicare Beneficiaries and add cost to health care. These anticipated outcomes would be an **easily measurable** expectation of implementing the anticoagulation codes.

This proposal would identify a discrete population of patients with a chronic condition that would have historical Medicare utilization data regarding Part A, B and D services. Upon initiation of funding, this patient population would be identified and ongoing health care utilization collected for comparison to this historical baseline. Additional comparisons could be made to Medicare Beneficiaries with similar conditions, but who are either not managed with the anticoagulation codes or who are being treated with newer, more expensive direct thrombin inhibitors whose cost effectiveness and outcome measures rely on limited clinical trial evidence.

Should these codes be funded, the RUC would be eager to participate in exploring the cost and quality measurement aspects of implementation with CMS, as the results may be generalizable to other planned interventions to link payment policy to anticipated positive outcomes. This highly feasible immediate implementation would also provide real experience to practicing physicians, organized medicine, and CMS in working toward other similar bundled care coordination codes. **The RUC recommends that CMS implement separate payment for CPT codes 99363 and 99364 Anticoagulant Management beginning January 1, 2012.**

*Education and Training for Patient Self-Management (CPT Codes 98960-98962)*

In 2006, the CPT Editorial Panel implemented three codes to describe patient education and training. CMS accepted direct practice expense inputs submitted by the RUC, however, the Agency implemented the codes as bundled within E/M services. These services are clearly separate and distinct from E/M, requiring 30 minutes of education provided by non-physician clinical staff.

98960 *Education and training for patient self-management by a qualified, non-physician health care professional using a standardized curriculum, face-to-face with the patient (could include caregiver/family) each 30 minutes; individual patient*

98961 *2-4 patients*

98962 *5-8 patients*

The vignette for 98960 is as follows and describes the patient that would benefit from care coordination and team based care:

*A 60 year-old man with a symptomatic established illness or disease, e.g. diabetes or asthma, or the desire to delay disease co-morbidities, e.g. cardiovascular co-morbidities, is referred by a physician to a qualified, non-physician health care professional, e.g. RD or RN, for education/training.*

The estimated national payment for these services, based on CMS published relative values, range from \$10-\$26, dependent upon the number of patients in the education session. **Immediate implementation of the education and training services (CPT codes 98960-98962) is recommended to recognize the costs associated with team based service.**

Medical Team Conference (CPT Codes 99366-99368)

Another service that would be included in a medical home or global payment in the long-term, but could be implemented short-term to recognize team based care is the medical team conference (CPT Codes 99366-99368). When a physician is involved in a team conference with the patient and other health care professionals, an E/M service may be reported. However, if the patient is not present (CPT 99367), no separate reporting is allowed by Medicare. Non-physicians, such as dietitians, physical and occupational therapists, are not allowed to separately report the time that they spend in team conferences, whether the patient is present (CPT 99366) or not (CPT 99368). Similar to the education and training codes described above, these time-based team codes are important in capturing real costs to a physician's practice. **Immediate implementation of the medical team conferences (CPT codes 99366-99368) is recommended to recognize the costs associated with team based care.**

Telephone Services (CPT Codes 99441-99443 and 98966-98969)

While technical issues related to audit standards and appropriateness may have precluded CMS from considering separate payment for telephone service in the past, the CPT Editorial Panel's revisions for *CPT 2008* and the enclosed RUC's recommendations illustrate that there is a path forward to appropriately pay for these services. Documentation for these services is required and the instructions are clear:

Telephone services are non-face-to-face evaluation and management (E/M) services provided by a physician to a patient using the telephone. These codes are used to report episodes of care by the physician initiated by an established patient or guardian of an established patient. If the telephone service ends with a decision to see the patient within 24 hours or next available urgent visit appointment, the code is not reported; rather the encounter is considered part of the preservice work of the subsequent E/M service, procedure, and visit.

Likewise, if the telephone call refers to an E/M service performed and reported by the physician within the previous seven days (either physician requested or unsolicited patient follow-up) or within the postoperative period of the previously completed procedure, then the service(s) are considered part of that previous E/M service or procedure. (Do not report 99441-99443, if reporting 99441-99444 performed in the previous seven days.)

99441 *Telephone evaluation and management service provided by a physician to an established patient, parent, or guardian not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 5-10 minutes of medical discussion*

99442 *11-20 minutes of medical discussion*

99443 *21-30 minutes of medical discussion*

(For telephone services provided by a qualified nonphysician health care professional, see 98966-98968)

(Do not report 99441-99443 when using 99339-99340, 99374-99380 for the same call (s))

(Do not report 99441-99443 for anticoagulation management when reporting 99363-99364)

Relative values are already developed and published by CMS for these services. The CPT Editorial Panel would welcome the opportunity to clarify language to provide the assurance that CMS may require to consider implementation of these codes. CMS may also consider a modest roll-out of these services to beneficiary groups who may benefit the most from such care coordination. Another alternative is to cap the number of phone calls per beneficiary per month (eg, two calls per month). The concerns about misuse of phone calls should be alleviated in part by the ease of understanding by the Medicare patient of the involved service. Medicare beneficiaries will easily understand an Explanation of Benefits (EOB) statement that describes telephone calls and determine whether or not a call had been convened for the time stated clearly in the CPT short description (eg, 99441 *Phone E/M by Phys 5-10 minutes*).

**The RUC recommends that CMS implement separate payment for Telephone Services (CPT Codes 99441-99443 and 98966-98969) beginning January 1, 2012.**

#### Medical Home

We recognize that the recommendation to identify and pay for individual, fragmented CPT codes describing only components of overall care coordination may not be consistent with a systematic move to more global payment models. However, immediate needs require that such an approach be implemented while a more comprehensive approach is developed. One such comprehensive approach was the RUC's recommendations related to medical home (see attached). The descriptors for the medical home demonstration incorporated all of the individual care coordination tasks discussed in the above recommendations.

In May 2008, CMS applauded the RUC for its work on medical home. Yet, the demonstration project was never implemented and organized medicine has never received an explanation regarding the impediments to implementing this specific proposal. On September 26, 2011, CMS announced a new Comprehensive Primary Care Initiative, where partnering with private and other public payors, CMS proposes to implement a medical home payment model in 5-7 geographic locations in 2012. Unlike the demonstration project previously envisioned that allowed physicians to with various practice capabilities to participate, this new initiative is directed only at advanced primary care practices and payment amounts will be dependent on the complexity of the patient.

We are pleased that CMS is moving this issue forward in the new initiative. Great effort and expense has already been undertaken by many practices and organizations across our nation to work toward practice improvement through patient centered medical home. We believe that if CMS builds upon both these efforts, and the work that the RUC has already done in valuing the Patient Centered Medical Home, the outcome will lead to greater acceptance and success of this critical project. The Chronic Care Coordination Workgroup would benefit from a new conversation with CMS to better understand the concerns regarding the previously considered model and the decision-making that led to the structure of the new initiative. These discussions would also be helpful to the CPT Editorial Panel in considering how best to describe this model of team-based coordinated care.

CMS will note than in comments to the Proposed Rule on the 2012 Medicare Physician Payment Schedule, a wide range of specialties supported the RUC's efforts on medical home and proposed that this model be considered in lieu of a review of E/M valuation. We applaud CMS for moving in the direction of recognizing payment for medical home care coordination. However, a broader implementation is warranted. **We urge CMS to immediately engage with the CPT Editorial Panel and the RUC to clarify and resolve any issues that impede a broad and expedient implementation.**

The Chronic Care Coordination Workgroup will continue to convene over the coming months to provide strategic leadership to the CPT Editorial Panel and the RUC in addressing the coding and valuation of coordination of care and the prevention and management of chronic disease. **We urge CMS to immediately implement separate payment for anticoagulant management and other non face-to-face services to demonstrate that CMS is prepared to incentivize care coordination and foster delivery reform.**

***Separate Payment for High Cost Medical Supplies (Balloon Sinuplasty for 2012)***

The RUC has repeatedly requested that CMS create J codes for high cost supplies so that these expenses may be monitored closely and paid appropriately. The RUC submitted the following comment to CMS on August 24, 2011:

***Distinct Reporting for High Cost Disposable Supplies***

The RUC has repeatedly called on CMS to separately identify and pay for high cost disposable supplies using distinct J codes, rather than bundle into the service described by CPT. There are approximately 20 supply items that CMS has priced in excess of \$1,000, for example. **The RUC urges CMS to consider the**

**establishment of J codes for high cost supplies. The pricing of these supplies should be based on a transparent process, where items are annually reviewed and updated.**

CMS provided the RUC with the attached 2011 claims data for the CPT codes that include a supply item identified as costing more than \$1,000 per unit. While the mean, mode, and median for each CPT code indicate that typically only one unit of service is billed, additional analysis was conducted on one specific family of services, balloon sinuplasty (CPT codes 31295-31297).

Balloon sinuplasty was reviewed by the Practice Expense Subcommittee and the RUC in February 2010. The committees assumed that one unit of service would be reported in estimating practice expense inputs. The RUC recommended one kit (either SA106 or SA107) per CPT code. CMS priced these kits at \$2600 and \$1295, respectively. Following implementation of the codes on January 1, 2011, anecdotal reports surfaced that multiple units of services were being reported and the corresponding number of kits were not utilized. CMS reviewed the first six months of claims data for 2011 and determined that the typical claim does include multiple units of service, as follows:

Code	billed in more than one unit	billed in more than 2 units
31295	57%	24%
31296	54%	21%
31297	74%	48%

**The RUC again urges CMS to implement new policy that high cost supplies be assigned HCPCS codes (e.g. J codes) to better monitor appropriate payment. Further, the RUC recommends that CMS immediately remove the sinus surgery kit (SA106 and SA107) from the direct practice expense inputs for the procedure codes 31295-31297. CMS should instead create two new HCPCS codes to describe these sinus surgery kits to ensure that appropriate payment is made relative to the price of these supplies.**

#### ***Kyphoplasty – Non-Facility Practice Expense Input Recommendations***

In the July 19, 2011 Proposed Rule on the 2012 Medicare Physician Payment Schedule, CMS stated that stakeholders had requested the CPT codes 22523-22525 *Percutaneous Kyphoplasty* be priced in the non-facility setting. CMS suggested that the RUC might assess whether non-facility pricing is appropriate. The RUC does not believe that it is within the Committee's expertise to determine whether or not a service can be performed in the office setting safely or effectively. The RUC did solicit specialty societies to provide an opportunity for data collection and submission. The American College of Radiology and the Society for Interventional Radiology submitted direct practice expenses for the non-facility setting for these CPT codes. The RUC reviewed this information and the recommended practice costs are included in the attached submission.

### ***Molecular Pathology – CPT 2012 Tier I and Tier II Recommendations***

The RUC understands that CMS is currently reviewing the new molecular pathology section for *CPT 2012* to determine which services will be paid on the Medicare Physician Payment Schedule versus the Clinical Lab Fee Schedule. Throughout 2011, CMS has urged the specialty and the RUC to provide data to help CMS make an informed decision. While the RUC does not make recommendations regarding the assignment of a service to a particular payment schedule, the Committee did review a significant volume of data presented by the College of American Pathologists. Recommendations for the Tier I and Tier II Molecular Pathology services to be described in *CPT 2012* are included in the attached submission. The RUC considers all of these codes to be new technology.

### ***Pacemaker or Pacing Cardioverter-Defibrillator – 2012 Bundled CPT Code Recommendations***

As part of the RUC's efforts to recommend code bundling for services reported by the same physician on the same date of service, the CPT Editorial Panel created a new code structure for pacemaker and cardioverter defibrillators for *CPT 2012*. The RUC submitted interim recommendations to CMS for these services in May 2011. At the September 22-24 RUC meeting, the Committee reviewed new survey data from cardiologists and has formulated revised recommendations. The revised RUC recommendations for new CPT codes 33212-33231 are included in the attached submission.

### ***Psychoanalysis – 4<sup>th</sup> Five-Year Review Recommendation***

CMS referred 90845 *Psychoanalysis* to the RUC as part of the 4<sup>th</sup> Five-Year Review of the RBRVS. In October 2010, the RUC referred the entire psychiatry section to the CPT Editorial Panel for further review. The Editorial Panel and the specialties involved all agreed that no further revision is needed for psychoanalysis. Therefore, the specialty presented their data for this service to the RUC. The RUC recommendations for CPT code 90845 are included in the attached submission.

### ***Update on Review of RUC's Multi-Specialty Points of Comparison (MPC) Codes***

In the *Final Rule* for the 2011 Medicare Physician Payment Schedule, CMS requested that the RUC review high volume services included on the RUC's Multi-Specialty Points of Comparison (MPC). The RUC has engaged in a more comprehensive review of the MPC, reconstructing the document to ensure that it includes true cross-specialty services. Several of the specific codes identified by CMS were scheduled for review at the September 2011 RUC meeting, with specialty society data submitted. Review of each of the following codes, however, led to significant concerns with the survey data, and in some cases, coding and payment policy for the individual codes. The RUC recommended the following course of actions for these services.

31231 *Nasal endoscopy, diagnostic, unilateral or bilateral (separate procedure)* – Re-survey for the February 2012 RUC meeting with improved vignette to describe the typical unilateral vs. bilateral and better define the work of the involved local anesthetic in the survey instrument.

43239, 45380, 45385 *GI Endoscopy Services* – The specialty societies representing gastroenterology presented that appropriate surveys could not be conducted until after the specialty had an opportunity to resolve payment policy issues related to the provision of moderate

Donald Berwick, MD

October 3, 2011

Page 10

sedation. The RUC understands that gastroenterology will be working with the CPT Editorial Panel and CMS to resolve this coding and payment policy question as it relates to all of GI endoscopy services (120+ services). In the meantime, the RUC will remove all such services from the MPC. The specialty societies indicated that they plan to engage with the RUC on a workplan to survey all 120+ codes once the issues related to moderate sedation have been addressed.

*77003 Fluoroscopic guidance and localization of needle or catheter tip for spine or paraspinal diagnostic or therapeutic injection procedures (epidural, subarachnoid)* – The RUC noted many issues with the survey conducted for this service that is performed concurrently with an injection procedure. The specialties did not include the new 2012 CPT descriptor in the survey and there were issues related to the clinical vignette. The RUC urged the specialty to develop a new vignette and instructions to inform the respondent that the injection is reported separately. The Research Subcommittee will review the revised vignette and instructions prior to the survey data collection for the February 2012 RUC meeting.

#### ***Positioning Time in Non-Manipulation Fracture Codes***

In the June 6, 2011, *Proposed Rule* for the 4th Five-Year Review of the RBRVS, CMS requests that the RUC examine all the non-manipulation fracture codes to determine if positioning time was incorporated into the work RVU for the codes and if so, whether the need for positioning time was documented.

The American Academy of Orthopaedic Surgeons (AAOS) submitted a letter to the RUC explaining that of the 50 non-manipulation fracture codes, only 5 have been reviewed by the RUC and most included 2 minutes of positioning time. The time was documented in the service descriptions. Magnitude estimation was utilized in developing the work relative values for these services. The remaining 45 codes were part of the Harvard study and did not include any positioning time. **The RUC agrees with the AAOS assessment included in this submission, recognizing that the services were valued using magnitude estimation, not via a building block method. The two minutes of positioning time was documented in the service descriptions for the few individual services reviewed by the RUC.**

The RUC appreciates the opportunity to provide comment and recommendations related to the 2012 Medicare Physician Payment Schedule. If you have any questions regarding this submission, I would welcome the opportunity to speak to you personally, in particular related to our continuing work on care coordination. Of course, your staff may also contact Sherry Smith at the AMA for clarification regarding these recommendations.

Sincerely,

Barbara S. Levy, MD

cc: RUC Participants

**AMA/Specialty Society RVS Update Committee  
Summary of Recommendations**

**April 2006**

**Anticoagulant Management Services**

In 2001, the Centers for Medicare and Medicaid Services (CMS) stated that the standard of care for anticoagulant services was suboptimal and the current payment policy requires the physician to have the beneficiary make an office visit to discuss prothrombin time tests results and necessary adjustments to receive separate payment. Although it is clinically optimal for a physician to discuss results with a patient and make an adjustment during a face-to-face encounter under some circumstances, physicians often engage in these activities outside of a face-to-face encounter with the patient. The CPT Editorial Panel agreed with the specialty that bundling this post service time into the payment for the visit is unfair when physicians are managing patients on long-term anticoagulants. In addition, the Panel believed that CMS policy provides inadequate avenues for physicians to be paid for managing patients on long term anticoagulant may contribute to the problem of underutilization of anticoagulant drugs that has adverse effects on the health of patients. Failure to receive anticoagulant drugs when indicated can increase patient risk of thrombosis and embolism, and under or over anticoagulation can increase patient risk of bleeding. The CPT Editorial Panel discussed the issue at its February 2006 meeting and created two new codes to allow the reporting of anticoagulant management services. To ensure appropriate utilization of these codes, the Panel added minimum International Normalized Ratio (INR) measurements, eight for the initial anticoagulant management and three for subsequent therapy, and stated that this service cannot also be reported with another Evaluation and Management (E/M) code.

**99363**

The RUC reviewed the specialty society's survey results for new CPT code 99363 *Anticoagulant management for an outpatient taking warfarin, physician review and interpretation of International Normalized Ratio (INR) testing, patient instructions, dosage adjustment (as needed), and ordering of additional tests; initial 90 days of therapy (must include a minimum of 8 INR measurements)*. The RUC agreed that INR testing is typically performed 10 times over the initial 90 days of therapy to appropriate control anticoagulation. The typical code that is currently billed for this service is a 99211 *Office or other outpatient visit for the evaluation and management of an established patient, that may not require the presence of a physician. Usually, the presenting problem(s) are minimal. Typically, 5 minutes are spent performing or supervising these services* (Work RVU = 0.17). The current RVU total for ten E/M codes is similar ( $10 \times 0.17 = 1.70$ ) to the specialty survey median and recommended value (1.65) for the new code 99363. The RUC and the specialty agreed that the physician work and time of new code 99363 was similar to the work of ten 99211 E/M services. The RUC and

specialty also agreed that the intra-service physician time would typically total 50 minutes rather than what the surveyed median time of 100 minutes.

**The RUC recommends a relative work value of 1.65 for code 99363 with an intra-service and total time of 50 minutes.**

### **99364**

The RUC reviewed the survey data for CPT code 99364 *Anticoagulant management for a patient taking warfarin, physician review and interpretation of International Normalized Ratio (INR) testing, patient instructions, dosage adjustment (as needed), and ordering of additional tests; each subsequent 90 days of therapy (must include a minimum of three INR measurements)*. The RUC agreed that the typical code that is currently billed for this services is a 99211 *Office or other outpatient visit for the evaluation and management of an established patient, that may not require the presence of a physician. Usually, the presenting problem(s) are minimal. Typically, 5 minutes are spent performing or supervising these services* (Work RVU = 0.17). The RUC agreed that there are typically four INR measurements in each subsequent 90 days of therapy. The current RVU total for four 99211 services is similar ( $4 \times 0.17 = 0.68$ ) to the specialty survey median value (0.63) for the new code 99364. The RUC and the specialty agreed that the physician work and time of new code 99364 was similar to the work of four 99211 E/M services. The RUC and specialty also agreed that the intra-service physician time would typically total 20 minutes rather than the surveyed median time of 40 minutes.

**The RUC recommends a relative work value of 0.63 for code 99364 with an intra-service and total time of 20 minutes.**

### **Practice Expense**

The RUC reviewed the direct practice expense inputs for these codes and recommended a total of 90 minutes of clinical labor time for 99363 and 24 minutes for 99364, for phone calls and assisting the physician with patient information and chart review.

### **New Technology/Services**

The RUC identified codes 99363 and 99364 as new services to be reviewed again under the RUC's new technology process. **The RUC recommends that these codes are put on the new technology/services list and return to the RUC for re-review considering its utilization patterns once this service has become more widespread.**

CPT Code (●New)	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
<b>Medicine</b> <b>Case Management Services</b> <b><u>Anticoagulant Management</u></b>  <u>Anticoagulant services are intended to describe the outpatient management of warfarin therapy, including ordering, review, and interpretation of International Normalized Ratio (INR) testing, communication with patient, and dosage adjustments as appropriate.</u>  <u>When reporting these services, the work of anticoagulant management may not be used as a basis for reporting an Evaluation and Management service or Care Plan Oversight time during the reporting period. Do not report these services with 99371-99373, 0074T when telephone or on-line services address anticoagulation with warfarin management. If a significant, separately identifiable E/M service is performed, report the appropriate E/M service code using modifier 25.</u>  <u>These services are outpatient services only. When anticoagulation therapy is initiated or continued in the inpatient or observation setting, a new period begins after discharge and is reported with 99364. Do not report 99363-99364 with 99217-99239, 99291-99300, 99304-99318 or other code(s) for physician review, interpretation and patient management of home INR testing for a patient with mechanical heart valve(s).</u>  <u>Any period less than 60 continuous outpatient days is not reported. If less than the specified minimum number of services per period are performed, do not report the anticoagulant management services (99363-99364).</u>				
●99363	ZZ1	Anticoagulant management for an outpatient taking warfarin, physician review and interpretation of International Normalized Ratio (INR) testing, patient instructions, dosage adjustment (as needed), and ordering of additional tests; initial 90 days of therapy (must include a minimum of 8 INR measurements)	XXX	1.65
●99364	ZZ2	each subsequent 90 days of therapy (must include a minimum of three INR measurements)	XXX	0.63

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code:99363

Global Period: XXX

**Recommended Work Relative Value**Specialty Society RVU: **1.65**RUC RVU: **1.65**

CPT Descriptor: Anticoagulant management for a patient taking warfarin, physician review and interpretation of International Normalized Ratio (INR) testing, patient instructions, dosage adjustment (as needed), and ordering of additional tests; initial 90 days of therapy (must include a minimum of eight INR measurements)

(Do not report 99605-99606 for final period of less than 60 days. If treatment is interrupted and resumed, use 9936X2 for the period(s) of re-treatment)

(Do not report Evaluation and Management (E/M) service for these services or include these services when selecting the E/M service. If a significant, separately identifiable E/M service is performed, report the appropriate E/M service code.)

(Do not report 99605-99606 with 99371-99373 or 0074T when telephone or on-line services are for anticoagulation with warfarin management)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 69-year old female established patient is found to have atrial fibrillation. A stress echocardiogram done a year previously as part of an evaluation of chest pain did not demonstrate valvular heart disease. Her rate is controlled and her history does not suggest that this has occurred in the past 24 hours. The physician explains the risks and benefits of anticoagulation and initiates therapy. (Diagnosis of atrial fibrillation and face-to-face services at initiation of therapy is reported separately as evaluation and management service.)

Percentage of Survey Respondents who found Vignette to be Typical: 76%

Is conscious sedation inherent to this procedure? No Percent of survey respondents who stated it is typical? 0%

Is conscious sedation inherent in your reference code? No

Description of Pre-Service Work: none

Description of Intra-Service Work: For each prothrombin time test, a physician must: access the patient's medical record, review the results, and determine if any dosage adjustment and/or change in care plan is necessary. The physician may make dosage adjustments and/or care plan changes to account for: acute illness, possible drug interactions, diet changes affecting vitamin K intake; and/or procedures that require withholding or alternative anticoagulation. The physician then must make a notation in the medical record, contact the patient to convey the results/instructions, and arrange repeat testing at the appropriate interval.

Description of Post-Service Work: none

**Additional Rationale**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

A panel of representatives from ACP, AAN, and ACC reviewed the survey data, which was provided by internists, neurologists, and cardiologists. 76% of the survey respondents indicated that the vignette is typical. Survey respondents were asked to indicate the number of INRs that a patient typically receives during an initial 90-day period and the amount of time they personally spend furnishing anticoagulant management services described in the CPT code. The survey median number of INRs is 10 and the median physician time is 100 minutes. 32% of the survey respondents picked 99375 as the key reference service code. The panel noted that the 100 minutes of total physician time for the surveyed code is more than the 57 minutes of total time for 99375. Further, it noted that the mean intensity/complexity measure value for

the surveyed code is higher than for 99375 for four indicators; lower four indicators, and equal for one indicator. Considering that the work RVU for 99375 is 1.73, the specialties are comfortable recommending the survey median work RVU of 1.65.

---

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.
- 

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) Anticoagulant management service(s) that take place during a face-to-face encounter are currently reported using evaluation and management (E/M) services, typically established patient office visit codes, 99211-99215.

Physicians can bill CPT 99211 when a nurse (or other office personnel) meets with a patient in the office to discuss the prothrombin time test results. To bill using CPT 99211, the physician does not have to see the patient face to face but must be available in the suite if needed.

Physicians can bill a higher E/M service, CPT 99212-99215, if they choose to personally relay the prothrombin time results, evaluate the patient, and/or adjust the anticoagulant drug dosage. Physicians could also relay the results while evaluating and treating a related or unrelated condition. Physicians factor the anticoagulant monitoring activities into their decision regarding the level of E/M service that is appropriate to bill.

Anticoagulant management services that take place outside a face-to-face encounter are not separately reportable.

Medicare pays separately for home prothrombin time monitoring using a home device for beneficiaries with mechanical heart valves. CMS created HCPCS Level II code G0250 to allow reporting of the associated physician service after its 2001 national decision establishing coverage of a home prothrombin time monitor for home anticoagulant management. Code G0250 is defined as:

Physician review, interpretation and patient management of home INR testing for a patient with mechanical heart valve(s) who meet other coverage criteria; per four tests (does not require face-to-face service)

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Internal Medicine

How often? Commonly

Specialty Neurology

How often? Commonly

Specialty Cardiology

How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period?

We have attempted to estimate the number of times the code would be performed on Medicare patients using the information in the RUC database on the number of INR tests billed. We have assumed our numbers based on estimating the number of INRs that would be part of an initial as compared to a subsequent monitoring, and then dividing that number by the average number of INRs (10) for the first 90 days. We are unable to estimate the number of times the code would be billed on other patients because of a lack of data.

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty.

### Professional Liability Insurance Information (PLI)

Does the reference CPT code selected for physician work serve as a reasonable reference for PLI crosswalk? Yes

If no, please select another crosswalk and provide a brief rationale.

Indicate what risk factor the new/revised code should be assigned to determine PLI relative value. Non-Surgical

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code:99364

Global Period: XXX

**Recommended Work Relative Value**Specialty Society RVU: **0.63**RUC RVU: **0.63**

CPT Descriptor: each subsequent 90 days of therapy (must include a minimum of three INR measurements)

(Do not report 99605-99606 for final period of less than 60 days. If treatment is interrupted and resumed, use 99606 for the period(s) of re-treatment)

(Do not report Evaluation and Management (E/M) service for these services or include these services when selecting the E/M service. If a significant, separately identifiable E/M service is performed, report the appropriate E/M service code.)

(Do not report 99605-99606 with 99371-99373 or 0074T when telephone or on-line services are for anticoagulation with warfarin management)ts)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 69-year old female with chronic atrial fibrillation and no valvular heart disease managed for anticoagulant therapy with warfarin

Percentage of Survey Respondents who found Vignette to be Typical: 79%

Is conscious sedation inherent to this procedure? No Percent of survey respondents who stated it is typical? 0%

Is conscious sedation inherent in your reference code? No

Description of Pre-Service Work: none

Description of Intra-Service Work: For each prothrombin time test, a physician must: access the patient's medical record, review the results, and determine if any dosage adjustment and/or change in care plan is necessary. The physician may make dosage adjustments and/or care plan changes to account for: acute illness, possible drug interactions, diet changes affecting vitamin K intake; and/or procedures that require withholding or alternative anticoagulation. The physician then must make a notation in the medical record, contact the patient to convey the results/instructions, and arrange repeat testing at the appropriate interval.

Description of Post-Service Work: none

---

**Additional Rationale**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

A panel of representatives from ACP, AAN, and ACC reviewed the survey data, which was provided by internists, neurologists, and cardiologists. 79% of the survey respondents indicated that the vignette is typical. Survey respondents were asked to indicate the number of INRs that a patient typically receives during a subsequent 30-day period and the amount of time they personally spend furnishing anticoagulant management services described in the CPT code. The survey median number of INRs is 4 and the median physician time is 40 minutes.

32% of the survey respondents picked 99212 as the key reference service code. 99212 has a work RVU of 0.45 and a total physician time of 15 minutes. The panel noted that the surveyed code involves more physician time than for the reference service code. Further, the panel noted that the mean intensity/complexity measure value for the surveyed code is higher than for 99212 for four indicators; lower for four indicators, and equal for one indicator. Based on these comparisons, the panel determined that the survey median RVU of 0.80 is too high and that the survey 25th percentile RVU of 0.46 is too low. The panel then looked back at its work RVU recommendation for 99605, the initial 90-day anticoagulant management period, anticoagulation, of 1.65. The typical number of INRs for 99605 is 10 INR, compared to 4--with the amount of total physician time being 10 minutes per INR for both 99605 and 99606. Assuming INR work is identical, 4 INRs would require a work value of 40% of the initial code's 10 INRs, which would lead to 0.66. The committee also looked at the halfway point between the 25<sup>th</sup> percentile and the median, which would be a value of 0.63. With this information, the committee decided to recommend a work value of 0.63 for the subsequent visits.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) Anticoagulant management service(s) that take place during a face-to-face encounter are currently reported using evaluation and management (E/M) services, typically established patient office visit codes, 99211-99215.

Physicians can bill CPT 99211 when a nurse (or other office personnel) meets with a patient in the office to discuss the prothrombin time test results. To bill using CPT 99211, the physician does not have to see the patient face to face but must be available in the suite if needed.

Physicians can bill a higher E/M service, CPT 99212-99215, if they choose to personally relay the prothrombin time results, evaluate the patient, and/or adjust the anticoagulant drug dosage. Physicians could also relay the results while evaluating and treating a related or unrelated condition. Physicians factor the anticoagulant monitoring activities into their decision regarding the level of E/M service that is appropriate to bill.

Anticoagulant management services that take place outside a face-to-face encounter are not separately reportable.

Medicare pays separately for home prothrombin time monitoring using a home device for beneficiaries with mechanical heart valves. CMS created HCPCS Level II code G0250 to allow reporting of the associated physician service after its

2001 national decision establishing coverage of a home prothrombin time monitor for home anticoagulant management.

Code G0250 is defined as:

Physician review, interpretation and patient management of home INR testing for a patient with mechanical heart valve(s) who meet other coverage criteria; per four tests (does not require face-to-face service).

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Internal Medicine                      How often? Commonly

Specialty Neurology                              How often? Commonly

Specialty Cardiology                            How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period?

We have attempted to estimate the number of times the code would be performed on Medicare patients using the information in the RUC database on the number of INR tests billed. We have assumed our numbers based on estimating the number of INRs that would be part of an initial as compared to a subsequent monitoring, and then dividing that number by the average number of INRs (4) for each subsequent 90 days. We are unable to estimate the number of times the code would be billed on other patients because of a lack of data.

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty.

Does the reference CPT code selected for physician work serve as a reasonable reference for PLI crosswalk? Yes

If no, please select another crosswalk and provide a brief rationale.

Indicate what risk factor the new/revised code should be assigned to determine PLI relative value. Non-Surgical

**AMTA/Specialty Society Update Process**  
**PEAC Summary of Recommendation**  
**XXX Global Period**  
**Non Facility Direct Inputs**

99363

CPT Long Descriptor: Anticoagulant management for a patient taking warfarin, physician review and interpretation of International Normalized Ratio (INR) testing, patient instructions, dosage adjustment (as needed), and ordering of additional tests; initial 90 days of therapy (must include a minimum of eight INR measurements)

Sample Size:   N/A – consensus panel   Response Rate: (%):            Global Period:           

Geographic Practice Setting %: N/A consensus panel Rural            Suburban             
Urban            N/A -

Type of Practice %:            Solo Practice N/A consensus panel  
           Single Specialty Group  
           Multispecialty Group  
           Medical School Faculty Practice Plan

Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

Members from the three specialties who surveyed work values were asked to consider the direct inputs for the practice expense for the code based on staff recommendations. These members have worked extensively on RUC issues in the past and are familiar with the requirements. Those inputs were discussed at a conference call and finalized at that time.

Please describe the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

Intra-Service Clinical Labor Activities: For each INR performed, staff will access the patient's medical record, review the results, and determine if any dosage adjustment and/or change in care plan is necessary. Staff will also communicate results/dosage adjustment/care plan changes back to the patient. In cases in which blood is drawn at the physician's office staff may also discuss patient's status during the draw. This work would require 10 minutes of staff time. There is an average of 10 INR measurements performed in the initial 90 day period, so the recommended staff time for the RN/LPN/MTA is 100 minutes.

Post-Service Clinical Labor Activities:

**AMTA/Specialty Society Update Process**  
**PEAC Summary of Recommendation**  
**XXX Global Period**  
**Non Facility Direct Inputs**  
99364

CPT Long Descriptor:

each subsequent 90 days of therapy (must include a minimum of three INR measurements

(Do not report 99363-99364 for final period of less than 60 days. If treatment is interrupted and resumed, use 99364 for the period(s) of re-treatment)

(Do not report Evaluation and Management (E/M) service for these services or include these services when selecting the E/M service. If a significant, separately identifiable E/M service is performed, report the appropriate E/M service code.)

(Do not report 99363-99364 with 99371-99373 or 0074T when telephone or on-line services are for anticoagulation with warfarin management)

Global Period: xxx

Sample Size: N/A – consensus panel Response Rate: (%):           

Geographic Practice Setting %: N/A – consensus panel Rural            Suburban             
Urban           

Type of Practice %:            Solo Practice N/A – consensus panel  
           Single Specialty Group  
           Multispecialty Group  
           Medical School Faculty Practice Plan

Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

For each INR performed, staff will access the patient's medical record, review the results, and determine if any dosage adjustment and/or change in care plan is necessary. This work would require 10 minutes of staff time. Staff will also communicate results/dosage adjustment/care plan changes back to the patient. In cases in which blood is drawn at the physician's office staff may also discuss patient's status during the draw. There is an average of 4 INR measurements performed in the subsequent 90 day periods, so the recommended staff time for the RN/LPN/MTA is 40 minutes.

Please describe the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

Intra-Service Clinical Labor Activities: access the patient's medical record, review the results, and determine if any dosage adjustment and/or change in care plan is necessary

AMA/Specialty Society RVS Update Committee  
Summary of Recommendations

April 2005

**Education and Training for Patient Self Management**

The CPT Editorial Panel created three new codes to describe educational and training services prescribed by a physician and provided by a qualified, non-physician healthcare professional. There is no physician work associated with these services. The RUC considered recommendations for direct practice expense inputs only. The RUC reviewed inputs for CPT code 98960 *Education and training for patient self-management by a qualified, non-physician health care professional using a standardized curriculum, face-to-face with the patient (could include caregiver/family) each 30 minutes; individual patient*, 98961 *2-4 patients* and 98962 *5-8 patients*. **The RUC assessed and modified the practice expense inputs, which are attached to this recommendation.**

CPT Code (●New)	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
● 98960	K1	Education and training for patient self-management by a qualified, non-physician health care professional using a standardized curriculum, face-to-face with the patient (could include caregiver/family) each 30 minutes; individual patient	XXX	0.00 (PE Inputs Only)
● 98961	K2	2-4 patients	XXX	0.00 (PE Inputs Only)
● 98962	K3	5-8 patients	XXX	0.00 (PE Inputs Only)

**AMA/Specialty Society Update Process  
PERC Summary of Recommendation  
XXX Global Period  
Non Facility Direct Inputs**

CPT Long Descriptor: Education and training for patient self-management by a qualified, non-physician health care professional, e.g. RD or RN, using a standardized curriculum

[Note: The CPT panel approved this generic code set with the intent it would be used by many qualified health care professionals. While the code is ‘generic,’ there may be instances where the service includes different equipment based on the practitioner’s skill set, the patient/client’s educational objectives/desired outcomes, and the specific nature of the education and training provided.]

The American Dietetic Association (ADA) and the American Association of Clinical Endocrinologists (AACE) compiled this PE summary of recommendations which represents the “typical” clinical labor time, supplies and equipment performed by clinical endocrinologists and dietitians.

*Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:*

Both the American Dietetic Association (ADA) and the American Association of Clinical Endocrinologists (AACE) individually convened expert practice expense panels to collect data for the Education and Training codes. Both groups’ expert panelists represent a variety of practice settings and geographic locations.

Once each group’s data was obtained, ADA and AACE then compiled each group’s respective data obtained from the PE expert panel for clinical labor time, supplies and equipment.

CPT Long Descriptor:

Education and training for patient self-management by a qualified, non-physician health care professional e.g. RD or RN, using a standardized curriculum, face-to-face with the patient (could include caregiver/family) each 30 minutes;

98961      Group 2-4

98962      Group 5-8

[Note: The CPT panel approved this generic code set with the intent it would be used by many qualified health care professionals. While the code is ‘generic,’ there may be instances where the service includes different equipment based on the practitioner’s skill set, the patient/client’s educational objectives/desired outcomes, and the specific nature of the education and training provided.]

The American Dietetic Association (ADA) and the American Association of Clinical Endocrinologists (AACE) compiled this PE summary of recommendations, which represents the

## **CPT Code: 98960, 98961 and 98962**

“typical” clinical labor time, supplies and equipment performed by registered dietitians and clinical endocrinologists’ staff.

*Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:*

Both the American Dietetic Association (ADA) and the American Association of Clinical Endocrinologists (AACE) individually convened expert practice expense panels to collect data for the Education and Training codes. Both groups’ expert panelists represent a variety of practice settings and geographic locations.

Once each group’s data was obtained, ADA and AACE then compiled each group’s respective data obtained from the PE expert panel for clinical labor time, supplies and equipment.

Please describe the clinical activities of your staff:

### **98960 Disease Education Vignette**

Typical Patient: A 35 year-old woman with a symptomatic established illness or disease, e.g. diabetes or asthma, or the desire to delay disease co-morbidities, e.g. cardiovascular co-morbidities, is referred by a physician to a qualified, non-physician health care professional for education/training, eg. RD or RN.

The qualified, non-physician health care professional:

Pre-Service

- Reviews relevant parts of the patient’s medical record
- Reviews the physician referral

Intra-Service

- Assesses the individual’s psychological, social, environmental factors, lifestyle habits, health literacy, and learning styles;
- Using a standardized curriculum, provides education/training to self-manage the illness/disease, or delay the disease co-morbidities, or use a device;
- Answers the patient’s questions as part of the education and training group session

Post-Service

- Establishes a plan for follow-up evaluation and ongoing assessment of outcomes, and communicates to the patient;
- Documents the education/training provided and describes the plan for follow-up

### **98961 and 98962 Group Education & Training Vignette**

Typical Patient: A 60 year-old man with a symptomatic established illness or disease, e.g. diabetes or asthma, or the desire to delay disease co-morbidities, e.g. cardiovascular co-morbidities, is referred by a physician to a qualified, non-physician health care professional, e.g. RD or RN, for group education/training.

## **CPT Code: 98960, 98961 and 98962**

The qualified, non-physician health care professional:

### **Pre-Service**

- Reviews relevant parts of the patient's medical record for all patients involved in the group
- Reviews the physician referral for each patient

### **Intra-Service**

- Assesses the groups' psychological, social, environmental factors, lifestyle habits, health literacy, and learning styles;
- Using a standardized curriculum, provides education/training to self-manage the illness/disease, or delay the disease co-morbidities, or use a device;
- Answers the patients' questions as part of the education and training group session

### **Post-Service**

- Establishes a plan for follow-up evaluation and ongoing assessment of outcomes, and communicates to each patient in the group;
- Documents the education/training provided and describes the plan for follow-up education/training for each patient in the group.

AMA/Specialty Society RVS Update Committee  
Summary of Recommendations

February and April 2007

**Team Conferences**

In November 2006, the CPT Editorial Panel created CPT codes 99365 *Medical team conference with interdisciplinary team of health care professionals, face to face with patient and/or family, 30 minutes or more; participation by physician* and 99367 *Medical team conference with interdisciplinary team of health care professionals, patient and/or family not present, 30 minutes or more; participation by physician* to differentiate team conferences at which the patient is present and when the patient is not present.

The CPT Editorial Panel also developed new codes corresponding to non-physician services. The RUC reviewed and submitted the following recommendations on the physician (MD/DO) services only. The HCPAC independently reviewed and submitted separate recommendations on the non-physicians services.

The CPT Executive Committee subsequently reconsidered CPT code 99365. Discussions initiated by the RUC process indicated that team conference services by the physician with the patient and/or family present may be reported using appropriate E/M codes. A research of materials from the creation of the E/M codes indicates that the language concerning face-to-face time and counseling and coordination of care appears to have been included so as to address meetings conducted for the purpose of coordinating care. The Executive Committee confirmed that the E/M codes would be appropriate when counseling and coordination of care dominate the service and the patient and/or family is present. It is unlikely any significant number of team conferences would not be for the purpose of counseling and/or coordination of care. The E/M codes have greater flexibility than a single code for a team conference by a physician, patient and/or family present. Therefore, the RUC proposed the CPT code 99365 be rescinded. The introductory text from the team conference section is revised to account for this interpretation by removing other restrictions and referencing E/M. The requirement for direct participation in the care of the patient remains in response to concerns that the E/M codes would be improperly reported when the physician role was simply to attend a conference about the patient. **The CPT Executive Committee recommends that CPT code 99365 be rescinded.**

The RUC reviewed the survey data for 99367 and compared it to its reference code 99374 *Physician supervision of a patient under care of home health agency (patient not present) in home, domiciliary or equivalent environment* (Work RVU=1.10). The RUC agreed that 99374 was a good reference for the surveyed code as both codes are non-face-to-face services. Although, when comparing the two codes, the RUC noted that 99374 was deemed to be a slightly more intense procedure to perform and had slightly more total service time associated with it as compared to the surveyed code (40 minutes and 34 minutes, respectively), the RUC believed these two codes to be equal in overall work. Therefore, the RUC recommends a

work RVU of 1.10 RVUs for 99367 which is a value slightly below the 25<sup>th</sup> percentile of the survey data. **The RUC recommends 1.10 work RVUs for 99367.**

**Practice Expense:**

The RUC recommends no practice expense inputs for 99367.

SUMMARY OF RECOMMENDATION**

CPT Code: 99367      Tracking Number C3      Specialty Society Recommended RVU: **1.10**

Global Period: XXX

RUC Recommended RVU: **1.10**

CPT Descriptor: Medical team conference with interdisciplinary team of health care professionals, patient and/or family not present, 30 minutes or more; participation by physician

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A patient with a neurological disorder, weight loss and functional limitations lives at home with a caregiver. The functional limitations include impaired cognition, mobility, communication and dependencies in basic activities of daily living. The condition is such that the problems and functional limitations are likely to be alleviated with appropriate care and therapies. The optimal care plan needs to be devised in a coordinated manner given the multiple domains requiring attention (biomedical, psychological, social and functional) and multiple healthcare professionals involved in the care of the patient. After undergoing evaluations (each reported separately) by the appropriate disciplines/specialties a team conference is convened.

Percentage of Survey Respondents who found Vignette to be Typical: 83%

Is conscious sedation inherent to this procedure? No Percent of survey respondents who stated it is typical? 0%

Is conscious sedation inherent in your reference code? No

Description of Pre-Service Work: Chart review prior to conference.

Description of Intra-Service Work: The conference is attended by the physician and/or non-physician providers.

Description of Post-Service Work: This service includes the individual clinician's post conference creation of documentation of his/her participation in the team conference, including documenting contributed information and treatment recommendations, and review of the care plan for the patient.

99242                      XXX                      1.34                      **RUC Time**

CPT Descriptor Office consultation for a new or established patient, which requires these three components: an expanded problem focused history; an expanded problem focused examination; straightforward medical decision making. Counseling and coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate severity. Physicians typically spend 30 minutes face-to-face with the patient and/or family.

### **RELATIONSHIP OF CODE BEING REVIEWED TO KEY REFERENCE SERVICE(S):**

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by the mean) of the service you are rating to the key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

**Number of respondents who choose Key Reference Code: 11                      % of respondents: 47.8 %**

**Additional Rationale**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

An expert panel was convened with representatives from AGS. AAP, APA, and AAPMR reviewed changes in recommendations and support the AGS changes.

The description of pre service work says: N/A – this did not go to the respondents and the N/A was incorrect – there is chart review involved before the conference – the surveyees thought this took 10 min – our expert panel thought 5 min was sufficient; the description of post-service work, which also did not go to surveyees, incorrectly included some intraservice work. The only post-service work is the last sentence of the post service work description – specifically, documentation of the physicians participation and any management plan, as appropriate and review of the summary report when it comes out. The surveyees estimated that this took 15 min. We believe that the surveyees may have incorrectly assumed that post service work also included a phone call to the patient or preparing the post conference summary. Therefore, our expert panel reduced the post service time to 5 min.

Work RVUs – Our expert panel recommends 1.1 RVUs for 99367 and 1.20 RVUs for X1. The most appropriate comparator code to 99367 is 99374 which was the reference service chosen most often by respondents. Both codes are non-face-to-face codes and the intensity of 99367 is slightly lower than 99374 because multiple physicians are present at the conference and only a single physician performs 99374. 99374 has an intraservice time of 20 min and a total time of 34 minutes while 99367 has an intraservice time of 30 min and a total time of 40 minutes. The recommended work RVU of 1.1, which is identical to 99374, is based on the longer intraservice time and slightly lower intensity of 99367 as compared to 99374. This RVU is below the survey 25<sup>th</sup> percentile and places the two codes in proper rank order.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 99361

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pediatrics How often? Commonly

Specialty Geriatrics How often? Commonly

Specialty Physical Medicine & Rehabilitation How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 802000

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty.

Specialty Pediatrics Frequency 200000 Percentage 24.93 %

Specialty Geriatrics Frequency 550000 Percentage 68.57 %

Specialty Physical Medicine & Rehabilitation Frequency 2000 Percentage 0.24 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

538,900 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty.

Specialty Pediatrics Frequency 0 Percentage 0.00 %

Specialty Geriatrics Frequency 522500 Percentage 96.95 %

Specialty Physical Medicine & Rehabilitation Frequency 1400 Percentage 0.25 %

Do many physicians perform this service across the United States? Yes

**Professional Liability Insurance Information (PLI)**

Does the reference CPT code selected for physician work serve as a reasonable reference for PLI crosswalk? Yes

If no, please select another crosswalk and provide a brief rationale.

Indicate what risk factor the new/revised code should be assigned to determine PLI relative value. Non-Surgical

## RUC HCPAC Review Board Summary of Recommendations

February 2007

### Team Conferences

The CPT Editorial Panel created CPT codes 99366 *Medical team conference with interdisciplinary team of health care professionals, face to face with patient and/or family, 30 minutes or more; participation by non-physician qualified health care professional* and 99368 *Medical team conference with interdisciplinary team of health care professionals, patient and/or family not present, 30 minutes or more; participation by non-physician qualified health care professional* to differentiate team conferences at which the patient is present and when the patient is not present and differentiate the various healthcare professionals who may participate in the team conference.

The HCPAC reviewed the specialty societies survey results for codes 99366 and 99368. These services are performed by a health care professionals from various professions. Therefore, six different professions were involved in surveying these services to appropriately capture the typical time and work involved. Approximately 160 health care professionals completed the surveys for 99366 and 145 completed surveys for 99368, with median annual service performance rates of 30 and 35, respectively.

The HCPAC thoroughly reviewed the specialty societies survey results and recommendations for codes 99366 *Team Conference, health care professionals, patient present* and 99368 *Team Conference, health care professionals, patient not present*. The HCPAC agreed that 99366 would involve slightly more physician work than 99368 because there is more involvement when the patient and/or family is present. The HCPAC concluded that the survey results were flawed because the survey respondents had overestimated physician time due to the key reference service chosen 99242 *Office consultation for a new or established patient* (work RVU=1.34). CPT code 99242 is not a service typically performed by these health care professionals. The reference service poorly compared to the work and time involved to perform these team conference services. The survey resulted in inappropriately high RVUs compared to other health care professional services and there was not appropriate rationale for the health care professionals' recommended work relative value units.

In order to standardized the time to 30 minutes and properly value these team conference services, the HCPAC then performed a weighted average based on the survey median work values per specialty, with an intra-service time of 30 minutes. The weighted RVU for 99366 was calculated as follows:

#### Weighted Average for 99366

A	B	C	D	E
HCPAC Society	Proposed Intra-Service Time / Survey Median Intra-Time	Column B x Survey Median Work Value	Column C x Percentage of Total Respondents	Total
ASHA	$30/35 = 0.86$	$0.86 \times 1.13 = 0.97$	$0.97 \times 28\% = 0.27$	0.27
ADA	$30/45 = 0.66$	$0.66 \times 1.37 = 0.91$	$0.91 \times 24\% = 0.22$	0.22
APA	$30/60 = 0.50$	$0.50 \times 1.25 = 0.63$	$0.63 \times 21\% = 0.13$	0.13
AOTA	$30/52.5 = 0.57$	$0.57 \times 1.20 = 0.68$	$0.68 \times 16\% = 0.11$	0.11
APTA	$30/35 = 0.86$	$0.86 \times 1.10 = 0.94$	$0.94 \times 7\% = 0.06$	0.06
NASW	$30/45 = 0.66$	$0.66 \times 1.30 = 0.86$	$0.86 \times 4\% = 0.03$	0.03
			<b>Weighted RVU =</b>	<b>0.82</b>

The weighted average calculation produced a work relative value of 0.82. The HCPAC determined that a 0.82 work RVU was appropriate when compared to commonly reported codes by other health care professionals such as occupational therapists, physical therapists and dieticians. For example, code 97110 *Therapeutic procedure, one or more areas, each 15 minutes; therapeutic exercises to develop strength and endurance, range of motion and flexibility* valued at (RVU=0.45) or code 97803 *Medical nutrition therapy; re-assessment and intervention, individual, face-to-face with the patient, each 15 minutes* valued at (RVU=0.37), both which are valued at 15 minute increments. Therefore, if these services are doubled to 30 minutes, for a comparable reference to code 99366, the RVUs equal 0.90 and 0.74 respectively. Thus placing the RVU recommendation of 0.82 for 99366 appropriately relative to similar health care professional services. **The HCPAC recommends a work RVU of 0.82 for code 99366.**

The HCPAC analyzed the survey pre-, intra-, and post-service survey times and determined that these times were too high, relative to similar services performed by health care professionals. The HCPAC compared the surveyed pre/intra/post times to the aforementioned commonly reported codes by other health care professionals, 97110 (2/14/2 minutes) and 97803 (0/15/0 minutes). If these 15 minute timed reference codes are doubled to adequately compare this 30 minute service, the times of 5/30/5 for 99366 and 99368 are appropriate. Additionally, these timed codes state 30 minutes or more in the code descriptor and the HCPAC felt that 30 minutes intra-service time appropriately measured the intensity and complexity involved in performing these services. **The HCPAC recommends a pre-service time of 5 minutes, intra-service time of 30 minutes, and immediate post-service time of 5 minutes for 99366.**

The HCPAC analyzed the specialty societies survey data for code 99368 *Team Conference, health care professionals, patient not present*. The HCPAC determined to crosswalk the percentage difference of the survey recommended RVU with the final recommended RVU for code 99366 (0.82/1.25) and apply this percentage difference to the survey recommended RVU to establish an appropriate rank order. The resulting work RVU recommendation is 0.72. **The HCPAC recommends a pre-service time of 5 minutes, intra-service time of 30 minutes, and immediate post-service time of 5 minutes for 99368. The HCPAC recommends a work RVU of 0.72 for code 99368.**

### ***Practice Expense***

The HCPAC reviewed the practice expense associated with 99366 and determined that typically when a patient is present they are greeted and receive a educational booklet. However, there are at least three health care professionals involved, so the greet time and one booklet are divided by 3 to apportion between providers who will all bill for this service. The HCPAC recommends less than one minute of greeting the patient (0.33 minutes, 1 minute of meet and greet time divided by 3 health care professionals). The HCPAC determined that a blended RN/LPN/MTA clinical labor mix typically provides the greeting. Additionally, the HCPAC recommends 1/3 or 0.33 of a patient education booklet as part of the medical supplies for code 99366. The HCPAC determined that there is no practice expense associated with code 99368.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 99366      Tracking Number C2      Specialty Society Recommended RVU: **1.34**  
Global Period: XXX      RUC Recommended RVU: **0.82**

CPT Descriptor: Medical team conference with interdisciplinary team of health care professionals, face to face with patient and/or family, 30 minutes or more; participation by non-physician qualified health care professional

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: Typical Patient - A patient with a neurological disorder, weight loss and functional limitations lives at home with a caregiver. The functional limitations include impaired cognition, mobility, communication and dependencies in basic activities of daily living. The condition is such that the problems and functional limitations are likely to be alleviated with appropriate care and therapies. The optimal care plan needs to be devised in a coordinated manner given the multiple domains requiring attention (biomedical, psychological, social and functional) and multiple healthcare professionals involved in the care of the patient. After undergoing evaluations (each reported separately) by the appropriate disciplines/specialties a team conference is convened.

Percentage of Survey Respondents who found Vignette to be Typical: 79%

Is conscious sedation inherent to this procedure? No Percent of survey respondents who stated it is typical? 0%

Is conscious sedation inherent in your reference code? No

Description of Pre-Service Work: The non-physician providers gather data and review the patient's chart and other pertinent information to prepare for the team consultation. Documentation and records from the individual provider is also collected and reviewed for the team consultation

Description of Intra-Service Work: The conference is attended by the non-physician and/or physician providers and the patient/patient's family member(s). After discussion, the group devises and approves a plan which includes specified goals, use of medical, nutrition and rehabilitative services and referral to community support services. All participants are engaged in the development, review and formulation of the care plan for the patient. Patient/patient's family member(s) receive educational brochure pertinent to the care plan.

Description of Post-Service Work: A summary report is written and made available to all participants and patient/patient's caregiver but its generation/compilation are reported separately.

Follow-up phone call to the patient/patient's family member(s) to assess understanding and implementation of the patient care plan.

This service does include the individual clinician's post conference creation of documentation of his/her participation in the team conference, including documenting contributed information and treatment recommendations, and review of the care plan for the patient.

\*\* See below survey data table on first page.

**Modifier -51 Exempt Status**

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

**New Technology/Service:**

Is this new/revised procedure considered to be a new technology or service? No

**KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
99242	XXX	1.34	RUC Time

CPT Descriptor Office consultation for a new or established patient, which requires these three key components: an expanded problem focused history; an expanded problem focused examination; and straightforward medical decision making. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of low severity. Physicians typically spend 30 minutes face-to-face with the patient and/or family.

**KEY MPC COMPARISON CODES:**

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

<u>MPC CPT Code 1</u>	<u>Global</u>	<u>Most Recent Medicare Utilization</u>	<u>Work RVU</u>	<u>Time Source</u>
99243	XXX	4,897,411	1.88	RUC Time

CPT Descriptor 1 Office consultation for a new or established patient, which requires these three key components: a detailed history; a detailed examination; and medical decision making of low complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate severity. Physicians typically spend 40 minutes face-to-face with the patient and/or family.

<u>MPC CPT Code 2</u>	<u>Global</u>	<u>Most Recent Medicare Utilization</u>	<u>Work RVU</u>	<u>Time Source</u>
-----------------------	---------------	---	-----------------	--------------------

CPT Descriptor 2

<u>Other Reference CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
99374	XXX	1.10	RUC Time

CPT Descriptor Physician supervision of a patient under care of home health agency (patient not present) in home, domiciliary or equivalent environment (eg, Alzheimer's facility) requiring complex and multidisciplinary care modalities involving regular physician development and/or revision of care plans, review of subsequent reports of patient status, review of related laboratory and other studies, communication (including telephone calls) for purposes of assessment or care decisions with health care professional(s), family member(s), surrogate decision maker(s) (eg, legal guardian) and/or key caregiver(s) involved in patient's care, integration of new information into the medical treatment plan and/or adjustment of medical therapy, within a calendar month; 15-29 minutes

**RELATIONSHIP OF CODE BEING REVIEWED TO KEY REFERENCE SERVICE(S):**

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by the mean) of the service you are rating to the key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

**Number of respondents who choose Key Reference Code:** 49      **% of respondents:** 30.8 %

**TIME ESTIMATES (Median)**

	<b>CPT Code: 99366</b>	<b>Key Reference CPT Code: 99242</b>	<b>Source of Time Harvard Time</b>

Service 1****Time Segments (Mean)**

Pre-Service intensity/complexity	3.12	3.04
Intra-Service intensity/complexity	3.98	3.92
Post-Service intensity/complexity	3.35	3.29

**Additional Rationale**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

After completing a convenience survey among HCPAC (non-physician) society providers (159 responses obtained), an expert panel (including APA, APTA, AOTA, ASHA, NASW and ADA) was convened to review and determine final work RVU recommendations for team conference codes 993699366 and 99368. After noting similarities in the reference service code and work RVU proposed values across all of these societies, the HCPAC societies contacted the physician groups who surveyed the team conference codes 993699365 and 99367 (AAP, APA, AGS and AAPMR) to review and discuss the work RVU recommendations.

While the HCPAC and physician groups have different experiences with completing the AMA work surveys, based on the collective number of survey responses and similar data across all groups, the work RVU data was merged. The HCPAC and physician panel agreed on the survey median work RVU of 1.34 for 99366 and 99365. This decision was based on the expert panel's agreement that the work effort is the same regardless of provider type who participates in the team conference. The 1.34 work RVU for 99366 is further supported based on the HCAPC survey data indicating the service involves 45 minutes intra-service time, longer than many of the intra-services times for codes included on the reference service list.

Additionally, the panel felt 99365 and 99366 include more intense work effort than 99367 and 99368 since the patient and/or family member are present during the team conference. A dynamic, highly engaged conference is required to plan and implement the care plan with the patient and family member(s). In the 99365 and 99366 work effort, the healthcare provider(s) translate clinical information in layman's terms for increased comprehension by the family/patient, respond to the family/patient questions, incorporate new information from the family/patient into the decision-making process, and adjust the care plan based on new information and family/patient input. All these activities increase the healthcare provider's work effort. The recommended work value is also supported by the complexity of the patient/patient's condition that requires active participation of at least 3 healthcare providers who participate on the team conference.

The expert panel feels the recommended work RVU of 1.34 for team conference codes 99366 and 99365 places these codes in correct rank order with the reference service code (99242; work RVU 1.34) as well as other E/M codes.

The panel reviewed E/M codes which represent much less time with the patient- 99214 (work RVU 1.42 for 25 minutes) and 99213 (work RVU = 0.92 for 15 minutes). The panel feels the recommended work value for 99366 and 99365 represents correct rank order based on this E/M code review.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 99361 however this code does not match the new description of 9936X2

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty ADA and ASHA How often? Commonly

Specialty APTA and AOTA How often? Commonly

Specialty APA and NASW How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 100000

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty.

Specialty ADA and ASHA Frequency 33333 Percentage 33.33 %

Specialty APTA and AOTA Frequency 33333 Percentage 33.33 %

Specialty APA and NASW Frequency 33333 Percentage 33.33 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

100,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty.

Specialty ADA and ASHA Frequency 33333 Percentage 33.33 %

Specialty APTA and AOTA Frequency 33333 Percentage 33.33 %

Specialty APA and NASW Frequency 33333 Percentage 33.33 %

Do many physicians perform this service across the United States? Yes

### Professional Liability Insurance Information (PLI)

Does the reference CPT code selected for physician work serve as a reasonable reference for PLI crosswalk? No

If no, please select another crosswalk and provide a brief rationale. 97110 (times 2) or 97803 (times 2) or a blend of these two codes.

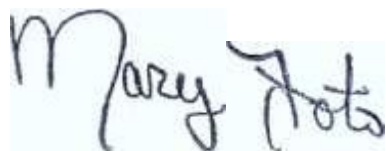

Indicate what risk factor the new/revised code should be assigned to determine PLI relative value. Non-Surgical

### Attestation Statement

**As a RUC Advisor, I attest that the integrity of the RUC survey and summary of recommendation forms are based on accurate and complete data to the best of my knowledge. As a RUC Advisor, I acknowledge that violations would be addressed by the executive committee (i.e., RUC Chair, AMA Representative and Alternate AMA Representative).**

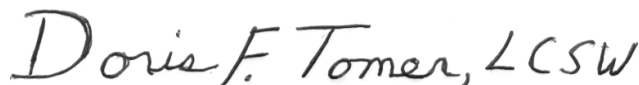

Robert C. Fifer, PhD, CCC-A; American Speech-Language Hearing Association

Mary Foto, OTR; American Occupational Therapy Association

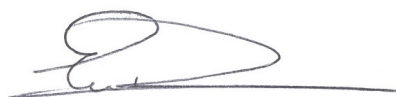

James Georgoulakis, PhD; American Psychological Association

Doris F. Tomer MSW, LCSW; National Association of Social Workers

Jane White, PhD, RD, FADA; American Dietetic Association

Erik Van Doorne, PT; American Physical Therapy Association

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 99368      Tracking Number C4      Specialty Society Recommended RVU: **1.30**  
Global Period: XXX      RUC Recommended RVU: **0.72**

CPT Descriptor: Medical team conference with interdisciplinary team of health care professionals, patient and/or family not present, 30 minutes or more; participation by non-physician qualified health care professional

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: Typical Patient - A patient with a neurological disorder, weight loss and functional limitations lives at home with a caregiver. The functional limitations include impaired cognition, mobility, communication and dependencies in basic activities of daily living. The condition is such that the problems and functional limitations are likely to be alleviated with appropriate care and therapies. The optimal care plan needs to be devised in a coordinated manner given the multiple domains requiring attention (biomedical, psychological, social and functional) and multiple healthcare professionals involved in the care of the patient. After undergoing evaluations (each reported separately) by the appropriate disciplines/specialties a team conference is convened.

Percentage of Survey Respondents who found Vignette to be Typical: 74%

Is conscious sedation inherent to this procedure? No Percent of survey respondents who stated it is typical? 0%

Is conscious sedation inherent in your reference code? No

Description of Pre-Service Work: The non-physician providers gather and review the patient's chart and other pertinent information to prepare for the team consultation. Documentation and records from the individual provider is collected and reviewed for the team consultation

Description of Intra-Service Work: The conference is attended by the non-physician and/or physician providers. After presentation of the case, all providers present their findings and recommendations. After discussion, the group devises and approves a plan which includes specified goals, use of medical, nutrition and rehabilitative services and referral to community support services. All participants are engaged in the development, review and formulation of the care plan for the patient.

Description of Post-Service Work: A summary report is written and made available to all participants and patient/patient's family but its generation/compilation are reported separately. A patient brochure regarding the care plan is also provided separately to the patient/patient's family member(s).

Follow-up phone call to the patient/patient's caregiver assess understanding and implementation of the patient care plan.

This service does include the individual clinician's post conference creation of documentation of his/her participation in the team conference, including documenting contributed information and treatment recommendations, and review of the care plan for the patient.

Post-Service intensity/complexity	3.33	3.30
-----------------------------------	------	------

**Additional Rationale**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

After completing a convenience survey among HCPAC (non-physician) society providers (144 responses obtained), an expert panel (including APA, APTA, AOTA, ASHA, NASW and ADA) was convened to review and determine final work RVU recommendations for team conference codes 99366 and 99368. After noting similarities in the reference service code and work RVU proposed values across all of these societies, the HCPAC societies contacted the physician groups who surveyed the team conference codes 99365 and 99367 (AAP, APA, AGS and AAPMR) to review and discuss the work RVU recommendations.

While the HCPAC and physician groups have different experiences with completing the AMA work surveys, based on the collective number of survey responses and similar data across all groups, the work RVU data was merged. The HCPAC and physician panel agreed on the survey median work RVU of 1.30 for 99368 and 99367. This decision was based on the expert panel's agreement that the work effort is the same regardless of provider type who participates in the team conference.

The 1.30 recommended work value demonstrates rank order between 993899366 and 99368 where 99368 has a lower work RVU since the patient and/or family member are not present during the team conference. Survey data supports the lower value for 99368 with an intra-service time of 30 minutes compared to 99366 intra-service time of 45 minutes.

The HCPAC and physician expert panel feels the recommended work RVU of 1.30 for team conference codes 99368 and 99367 places these codes in correct rank order with other reference service codes that have lower pre-, intra- and post service times (99379 work RVU 1.10, and 99374 work RVU 1.10). Rank order for the proposed 99368 and 99367 RVU of 1.30 is also supported through the expert panels' review of E/M codes 99213 and 99214; both represent less time with the patient (99213 work RVU 0.92 for 15 minutes and 99214 work RVU 1.42 for 25 minutes).

The recommended work value is also supported by the complexity of the patient/patient's condition that requires active participation of at least 3 healthcare providers who participate on the team conference. The conferences are 30 minutes or more, requiring interpretation of the multi-disciplinary clinical findings and spontaneous decision making to formulate the care plan.

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

**FREQUENCY INFORMATION**

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 99361

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty ADA and ASHA                      How often? Commonly

Specialty APTA and AOTA                      How often? Commonly

Specialty APA and NASW                      How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 100000

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty.

Specialty ADA and ASHA                      Frequency 33333                      Percentage 33.33 %

Specialty APTA and AOTA                      Frequency 33333                      Percentage 33.33 %

Specialty APA and NASW                      Frequency 33333                      Percentage 33.33 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

100,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty.

Specialty ADA and ASHA                      Frequency 33333                      Percentage 33.33 %

Specialty APTA and AOTA                      Frequency 33333                      Percentage 33.33 %

Specialty APA and NASW                      Frequency 33333                      Percentage 33.33 %

Do many physicians perform this service across the United States? Yes

---

**Professional Liability Insurance Information (PLI)**

Does the reference CPT code selected for physician work serve as a reasonable reference for PLI crosswalk? No

If no, please select another crosswalk and provide a brief rationale. 97110 (times 2) or 97803 (times 2) or a blend of these two codes.

Indicate what risk factor the new/revised code should be assigned to determine PLI relative value. Non-Surgical

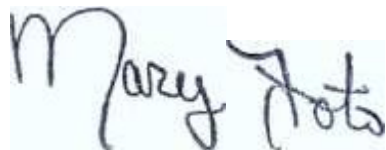

---

**Attestation Statement**

**As a RUC Advisor, I attest that the integrity of the RUC survey and summary of recommendation forms are based on accurate and complete data to the best of my knowledge. As a RUC Advisor, I acknowledge that violations would be addressed by the executive committee (i.e., RUC Chair, AMA Representative and Alternate AMA Representative).**

**XXX Global Period**  
**Non Facility Direct Inputs**

CPT Long Descriptor: Medical Team Conference with interdisciplinary team of health care professionals, face-to-face with patient and/or family, 30 minutes or more; participation by non-physician qualified health care professional.

An expert consensus panel was used to develop direct practice expense inputs for the team conference code 99366. The expert panel included HCPAC representatives from American Physical Therapy Association; American Psychological Association; American Speech, Language, and Hearing Association and the American Dietetic Association. These groups based their discussions on PE data obtained from the respective group's members.

Please describe the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

None

Intra-Service Clinical Labor Activities:

The clinical staff person greets the patient and/or family member(s) and takes them to the conference room.

Post-Service Clinical Labor Activities:

None.

Supplies: (see PERC spreadsheet)

TO: William Rich, MD  
Chair, AMA/Specialty Society RVS Update Committee

FROM: The American Occupational Therapy Association; American Physical Therapy Association; American Psychological Association; American Speech, Language, and Hearing Association; National Association of Social Workers, and the American Dietetic Association

Re: Direct Practice Expense Inputs for Code 99368 (team conference code without patient/family member present; Tracking Code C4)

Dear Dr Rich:

*Code 99368 (Medical team conference with interdisciplinary team of health care professionals, patient and/or family not present, 30 minutes or more; participation by non-physician qualified health care professional)* is one of the team conference codes being considered at the February 2007 RUC meeting.

The American Occupational Therapy Association; American Physical Therapy Association; American Psychological Association; American Speech, Language, and Hearing Association; National Association of Social Workers, and the American Dietetic Association convened an expert panel to review direct practice expense for this code, 99368, and 99366. The panel determined there is no direct practice expense for 99368 in either the facility or non-facility setting.

If you have any questions, please contact Pam Michael, MBA, RD, American Dietetic Association staff, at 312-899-4747 or [PMichael@eatright.org](mailto:PMichael@eatright.org). Thank you.

AMA/Specialty Society RVS Update Committee  
Summary of Recommendations

February 2007

**Non Face-to-Face Physician Services**

The CPT Editorial Panel created four new codes describing Evaluation and Management services performed by a physician via telephone or on-line. Typically these calls involve the physician obtaining a history of the patient, assessing the patient's condition, making a medical decision and communicating that decision via the phone/e-mail to the patient. Over the last two decades medicine has seen the rapid increase of medical information and communications technology. Combined with changing consumer and health plan expectations for enhanced access to care, a new focus on chronic disease management and continued pressure to reduce the codes of medical services, physicians are providing more care to patients in a "non-face-to-face" manner. Additionally, these services describe physician work that is currently not captured in any other CPT codes.

The CPT Editorial Panel also developed new codes corresponding to non-physician services. The RUC reviewed and submitted the following recommendations on the physician (MD/DO) services only. The HCPAC independently reviewed and submitted separate recommendations on the non-physicians services.

The RUC reviewed the specialty societies' survey results for codes 99441-99444 *Telephone and Online Evaluation and Management services*. Physicians from various specialties perform these services. Therefore, seven different specialties were involved in surveying these services to appropriately capture the typical physician time and work involved. Approximately 500 physicians completed the surveys for 99441-99443, with median annual service performance rates of 190, 100, and 35, respectively. Additionally, 150 physicians completed the survey for code 99444 *Online Evaluation and Management*, indicating a median annual performance rate of 10.

**99441**

The RUC reviewed the specialty societies survey results for code 99441 *Telephone Evaluation and Management, 5-10 minutes of medical discussion* and thoroughly discussed the physician time and work involved in this service. The RUC determined that the physician time for 99441 was slightly lower than the survey reference service code 99212 *Office or other outpatient visit for the Evaluation and Management of an established patient* (RVU=0.45, 2 minutes pre-, 10 minutes intra- and 4 minutes post-service time). The presenting specialty societies and the RUC agreed that the physician work for code 99441 should be lower than the survey

reference code 99212 but slightly higher than 99211 *Office or other outpatient visit for the Evaluation and Management of an established patient, that may not require the presence of a physician* (RVU=0.17, 5 minutes intra-service and 2 minutes post-service time). The RUC determined that using a magnitude estimation of 150% of the work RVUs for code 99211 would appropriately place 99441 in the proper rank order within the Evaluation and Management services family ( $0.17 \times 150\% = 0.25$ ). **The RUC recommends a work RVU of 0.25 for code 99441. The RUC recommends 1 minute pre-service, 8 minutes intra-service and 4 minutes post-service time for code 99441.**

#### **99442 and 99443**

The RUC reviewed the specialty societies survey results for codes 99442 *Telephone Evaluation and Management, 11-20 minutes of medical discussion* and 99443 *Telephone Evaluation and Management, 21-30 minutes of medical discussion* and thoroughly discussed the physician time and work involved in these services. The RUC determined that the RVU presented by the specialty societies for 99442, the 25<sup>th</sup> percentile work relative value of 0.60, was slightly high in relation to the RUC recommended value for 99441 (0.25 RVUs). The presenting specialty societies and the RUC agreed using a magnitude estimation for 99442 and 99443 would be appropriate to properly value these services within the Evaluation and Management family of services. The RUC determined that 99442 would be twice the recommended value for 99441 ( $0.25 \times 2 = 0.50$ ). Additionally, the RUC determined that 99443 would be three times the recommended value for 99441 ( $0.25 \times 3 = 0.75$ ). **The RUC recommends a work RVU of 0.50 for code 99442 and 1 minute pre-service, 15 minutes intra-service and 5 minutes post-service physician time. The RUC recommends a work RVU of 0.75 for code 99443 and 1 minute pre-service, 25 minutes intra-service and 10 minutes post-service physician time.**

#### **99444**

The RUC discussed code 99444 *Online Evaluation and Management* and concluded that the definition of work and physician time and complexity involved in this service were unclear, therefore making it difficult to recommend a specific work relative value. The specialty societies agreed and recommended that code 99444 be carrier-priced. The specialty societies indicated that they will bring this code back to CPT in order to develop a clearer definition of this service. **The RUC recommends that code 99444 be carrier-priced for CY 2008.**

#### **Practice Expense**

The PERC and RUC reviewed the direct practice expenses for 99441-99443 and slightly modified the conduct phone calls/call in prescriptions by the RN/LPN/MTA from 4 to 3 minutes and “other clinical activity” to zero. The presumption was that the typical service would include the clinical staff calling in a prescription. **The RUC recommends the modified practice expense as attached.**

### New Technology and New Physician Work

The RUC recommends that codes 99441-99443 be added to the new technology list to review potential changes in valuation after experience in reporting of these services has occurred. Additionally, the RUC recommends that these services involve new physician work not currently compensated within the physician payment system.

CPT Code (●New)	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
<u>Telephone services are non-face-to-face E/M services provided by a physician to a patient using the telephone. These codes are used to report episodes of care by the physician initiated by an established patient or guardian of an established patient. If the telephone service ends with a decision to see the patient within 24 hours or next available urgent visit appointment, the code is not reported; rather the encounter is considered part of the preservice work of the subsequent E/M service, procedure and visit. Likewise if the telephone call refers to an E/M service performed and reported by the physician within the previous seven days (either physician requested or unsolicited patient follow-up) or within the period of the previously completed procedure, then the service(s) are considered part of that previous E/M service or procedure. (Do not report 99441-99443 if reporting 99441-99444 performed in the previous seven days.)</u>				
●99441	O1	Telephone evaluation and management service provided by a physician to an established patient, parent, or guardian not originating from a related E/M service provided within the previous seven days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 5-10 minutes of medical discussion	XXX	0.25
●99442	O2	11-20 minutes of medical discussion	XXX	0.50
●99443	O3	21-30 minutes of medical discussion  (Do not report 99441-99443 when using 99339-99340, 99374-99380 for the same call(s))  (Do not report 99441-99443 for anticoagulation management when reporting 99363-99364)	XXX	0.75
<b><u>Online Medical Evaluation</u></b> <u>An online electronic medical evaluation is a non-face-to-face E/M service by a physician to a patient using Internet resources in response to a patient's online inquiry. Reportable services involve the physician's personal timely response to the patient's inquiry and must involve permanent storage (electronic or hard copy) of the encounter. This service is reported only once for the same episode of care during a seven day period, although multiple physicians</u>				

CPT Code (●New)	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
could report their exchange with the same patient. If the online medical evaluation refers to an E/M service previously performed and reported by the physician within the previous seven days (either physician requested or unsolicited patient follow-up) or within the postoperative period of the previously completed procedure, then the service(s) are considered covered by the previous E/M service or procedure. A reportable service encompasses the sum of communication (eg, related telephone calls, prescription provision, laboratory orders) pertaining to the online patient encounter.				
●99444	O4	Online evaluation and management service provided by a physician to an established patient, guardian or health care provider not originating from a related E/M service provided within the previous 7 days, using the Internet or similar electronic communications network  (Do not report 99444 when using 99339-99340, 99374-99380 for the same communication(s))  (Do not report 99444 for anticoagulation management when reporting 99363 to 99364)	XXX	Carrier-Priced
<b>Telephone Calls</b>				
D 99371		<del>Telephone call by a physician to patient or for consultation or medical management or for coordinating medical management with other health care professionals (eg, nurses, therapists, social workers, nutritionists, physicians, pharmacists); simple or brief (eg, to report on tests and/or laboratory results, to clarify or alter previous instructions, to integrate new information from other health professionals into the medical treatment plan, or to adjust therapy)</del>	XXX	N/A
D 99372		<del>intermediate (eg, to provide advice to an established patient on a new problem, to initiate therapy that can be handled by telephone, to discuss test results in detail, to coordinate medical management of a new problem in an established patient, to discuss and evaluate new information and details, or to initiate new plan of care)</del>	XXX	N/A
D 99373		<del>complex or lengthy (eg, lengthy counseling session with anxious or distraught patient, detailed or prolonged discussion with family members regarding seriously ill patient, lengthy communication necessary to coordinate complex services of several different health professionals working on different aspects of the total patient care)</del>	XXX	N/A

CPT Code (•New)	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
		plan)  (99371-99373 have been deleted. To report telephone evaluation and management services, see 99441-99443)		
<b>Category III</b> <b>Online Medical Evaluation</b> <p>An online medical evaluation is a type of Evaluation and Management (E/M) service provided by a physician or qualified health care professional to a patient using internet resources in response to the patient's online inquiry. Reportable services involve the physician's personal timely response to the patient's inquiry and must involve permanent storage (electronic or hard copy) of the encounter. This service should not be reported for patient contacts (eg, telephone calls) considered to be pre-service or post-service work for other E/M or non E/M services. A reportable service would encompass the sum of communication (eg, related telephone calls, prescription provision, laboratory orders) pertaining to the online patient encounter or problem(s).</p>				
D 0074T		Online evaluation and management service, per encounter, provided by a physician, using the Internet or similar electronic communications network, in response to a patient's request, established patient  (0074T has been deleted. To report, use 99444)		N/A

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 99441      Tracking Number 01      Specialty Society Recommended RVU: **0.35**

Global Period: XXX

RUC Recommended RVU: **0.25**

CPT Descriptor: Telephone evaluation and management service provided by a physician to an established patient, parent, or guardian not originating from a related E/M service provided within the previous seven days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 5-10 minutes of medical discussion.

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A patient known to the physician calls with a new complaint. The physician obtains a brief history and the patient's present medication use and makes treatment recommendations, all of which are recorded in the patient's medical record. The patient is instructed and advised to call if the symptoms fail to improve with the recommended treatment. The call lasts 8 minutes. No office visit is required.

Percentage of Survey Respondents who found Vignette to be Typical: 90%

Is conscious sedation inherent to this procedure? No Percent of survey respondents who stated it is typical? 0%

Is conscious sedation inherent in your reference code? No

Description of Pre-Service Work: The physician reviews records and communicates with other professionals regarding the patient as appropriate.

Description of Intra-Service Work: The physician obtains a brief history via phone, assesses the patients condition, makes a medical decision, and communicates that decision via phone to the patient.

Description of Post-Service Work: The physician documents the telephone call and oversees care plan. The physician also has discussion with family members or other health professionals associated with the delivery of care to this patient until the next E/M service is provided.

------------------------------------	------	------

Post-Service intensity/complexity	2.09	2.04
-----------------------------------	------	------

**Additional Rationale**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The RUC advisors for the participating specialty societies met by conference call to review and discuss the survey results. All of the surveying organizations except the American College of Physicians (ACP) used a panel sample; ACP used a random sample.

For 993XX1, the advisors noted that respondents rated the intensity and complexity of 993XX1 very similar to the key reference code, 99212, with the ratings for 993XX1 being slightly higher in each time segment and for all areas except physical effort. The advisors also noted the nearly identical total time of 993XX1 and 99212. The advisors agreed that 99212 was an appropriate key reference service, since a self-limited or minor presenting problem (as described in 99212) is consistent with a telephone evaluation and management service of 5 to 10 minutes duration (as described in 993XX1). Accordingly, consistent with the survey data, the specialty societies agreed to recommend the survey median of 0.45 work RVUs for 993XX1, which is also the current work RVUs assigned to the key reference code, 99212.

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and

accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. (not applicable)

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) This service was not previously reported.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty (See attached table.) How often?

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 28500200

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty.

Specialty (See attached table.) Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 4,586,320 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty.

Specialty (See attached table.) Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency Percentage %

Do many physicians perform this service across the United States? Yes

## Professional Liability Insurance Information (PLI)

Does the reference CPT code selected for physician work serve as a reasonable reference for PLI crosswalk? Yes

If no, please select another crosswalk and provide a brief rationale.

Indicate what risk factor the new/revised code should be assigned to determine PLI relative value. Non-Surgical

# **AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS SUMMARY OF RECOMMENDATION**

CPT Code: 99442      Tracking Number   O2   Specialty Society Recommended RVU: **0.60**

Global Period: XXX

RUC Recommended RVU: **0.50**

CPT Descriptor: Telephone evaluation and management service provided by a physician to an established patient, parent, or guardian not originating from a related E/M service provided within the previous seven days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 11-20 minutes of medical discussion.

## **CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A patient calls the office of a physician to discuss new acute illness symptoms. The physician obtains a brief history and makes treatment recommendations, all of which are recorded in the patient's medical record. The patient is instructed and advised to call if symptoms are increasing. The call lasts 15 minutes. No office visit is required.

Percentage of Survey Respondents who found Vignette to be Typical: 84%

Is conscious sedation inherent to this procedure? No Percent of survey respondents who stated it is typical? 0%

Is conscious sedation inherent in your reference code? No

Description of Pre-Service Work: The physician reviews records and communicates with other professionals regarding the patient as appropriate.

Description of Intra-Service Work: The physician obtains history via phone, assesses the patients condition, makes a medical decision, and communicates that decision via phone to the patient.

Description of Post-Service Work: The physician documents the telephone call and oversees care plan. The physician also has discussion with family members or other health professionals associated with the delivery of care to this patient until the next E/M service is provided.

**New Technology/Service:**

Is this new/revised procedure considered to be a new technology or service? Yes

**KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
99213	XXX	0.92	CMS Time File

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires at least two of these three key components: an expanded problem focused history; an expanded problem focused examination; medical decision making of low complexity. Counseling and coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of low to moderate severity. Physicians typically spend 15 minutes face-to-face with the patient and/or family.

**KEY MPC COMPARISON CODES:**

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

-----------------------------------	------	------

**Additional Rationale**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The RUC advisors for the participating specialty societies met by conference call to review and discuss the survey results. All of the surveying organizations except the American College of Physicians (ACP) used a panel sample; ACP used a random sample. For 993XX2, the advisors noted that respondents rated the intensity and complexity of 993XX2 very similar to the key reference code, 99213, for each time segment. They also noted that respondents consistently rated the intensity and complexity of 993XX2 higher than 99213 in all areas of mental effort and judgment, technical skill/physical effort, and psychological stress. The advisors also noted the identical time elements (pre-, intra-, and post-service) of 993XX2 and 99213. The advisors agreed that 99213 was an appropriate key reference service, since a presenting problem of low or moderate severity (as described in 99213) is consistent with a telephone evaluation and management service of 11 to 20 minutes duration (as described in 993XX2). Accordingly, consistent with the survey data, the specialty societies agreed to recommend the survey median of 0.90 work RVUs for 993XX2, which is almost the same as the work RVUs assigned to the key reference service, 99213, in 2007.

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. (not applicable)

The RUC advisors for the participating specialty societies met by conference call to review and discuss the survey results. All of the surveying organizations except the American College of Physicians (ACP) used a panel sample; ACP used a random sample. For 993XX3, the advisors noted that respondents rated the intensity and complexity of 993XX3 similar to and slightly less than that of the key reference code, 99214, for all areas and in each time segment. The advisors also noted the identical pre- and post-service time of 993XX3 and 99214, while intra-service and, therefore, total time, for 993XX3 was just 5 minutes less than 99214. The advisors agreed that 99214 was an appropriate key reference service, since a presenting problem of moderate to high severity (as described in 99214) is consistent with a telephone evaluation and management service of 21 to 30 minutes duration (as described in 993XX3). Accordingly, consistent with the survey data, the specialty societies agreed to recommend the survey median of 1.35 work RVUs for 993XX3, which is less than the current work RVUs assigned to the key reference code, 99214, reflecting the lower intensity and shorter time of the 993XX3.

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. (not applicable)

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) This service was not previously reported.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty (See attached table.)	How often?
---------------------------------	------------

Specialty	How often?
-----------	------------

Specialty	How often?
-----------	------------

Estimate the number of times this service might be provided nationally in a one-year period? 5215455

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty.

Specialty (See attached table.)	Frequency 0	Percentage 0.00 %
---------------------------------	-------------	-------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?  
833,881 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty.

Specialty (See attached table.)	Frequency 0	Percentage 0.00 %
---------------------------------	-------------	-------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Do many physicians perform this service across the United States? Yes

## Professional Liability Insurance Information (PLI)

Does the reference CPT code selected for physician work serve as a reasonable reference for PLI crosswalk? Yes

If no, please select another crosswalk and provide a brief rationale.

Indicate what risk factor the new/revised code should be assigned to determine PLI relative value. Non-Surgical

## Attestation Statement

**As a RUC Advisor, I attest that the integrity of the RUC survey and summary of recommendation forms are based on accurate and complete data to the best of my knowledge. As a RUC Advisor, I acknowledge**

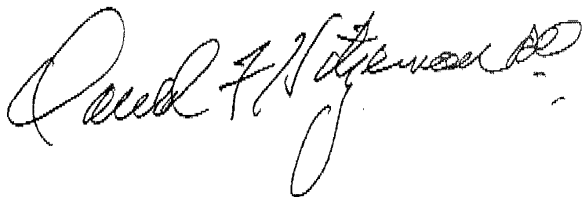

that violations would be addressed by the executive committee (i.e., RUC Chair, AMA Representative and Alternate AMA Representative).

Health Care Professionals Advisory Committee  
Summary of Recommendations

April 2007

**Non Face-to-Face Qualified Healthcare Professional Services**

The CPT Editorial Panel created four new codes describing Evaluation and Management services performed by a qualified healthcare professional via telephone or on-line. Typically, these calls involve the health care professional obtaining a history of the patient, assessing the patient's condition, making a medical decision and communicating that decision via the phone/e-mail to the patient. Over the last two decades, medicine has seen the rapid increase of medical information and communications technology. Combined with changing consumer and health plan expectations for enhanced access to care, a new focus on chronic disease management and continued pressure to reduce the codes of medical services, qualified healthcare professionals are providing more care to patients in a "non-face-to-face" manner. Additionally, these services describe work that is currently not captured in any other CPT codes.

The American Dietetic Association (ADA) and the American Physical Therapy Association (APTA), presented work relative value recommendations for the Non Face-to-Face Qualified Health Care Professional Services. The HCPAC reviewed the survey results and compared them to the Non Face-to Face Physician Services. After a detailed discussion, the HCPAC determined that the non-physician work was equivalent to the physician work for codes 98966-98968.

**98966**

First the HCPAC reviewed code 98966 *Telephone assessment and management service provided by a qualified non-physician health care professional to an established patient; 5-10 minutes of medical discussion*. The HCPAC determined that the survey median of 0.37 was too high compared to the physician code 99441 *Telephone assessment and management service provided by a physician to an established patient; 5-10 minutes of medical discussion* (work RVU recommendation = 0.25). The HCPAC chose to recommend the same time and work values at the code described to define physician work. The HCPAC agreed that 1 minute pre-service, 8 minutes intra-service and 4 minutes post-service time was appropriate for code 98966. **The HCPAC recommends a work RVU of 0.25 for 98966.**

**98967**

The HCPAC reviewed code 98967 *Telephone assessment and management service provided by a qualified non-physician health care professional to an established patient; 11-20 minutes of medical discussion*. The HCPAC determined that the survey median of 0.45 was similar compared to the physician code 99442 *Telephone assessment and management service provided by a physician to an established patient; 11-20 minutes of medical discussion* (work RVU recommendation = 0.50). The HCPAC chose to recommend the same time and work values at the code described

to define physician work. The HCPAC agreed that 1 minute pre-service, 15 minutes intra-service and 5 minutes post-service time was appropriate for code 98967. **The HCPAC recommends a work RVU of 0.50 for 98967.**

#### 98968

The HCPAC reviewed code 98968 *Telephone assessment and management service provided by a qualified non-physician health care professional to an established patient; 21-30 minutes of medical discussion*. The HCPAC determined that the survey median of 0.50 was too low compared to the physician code 99443 *Telephone assessment and management service provided by a physician to an established patient; 21-30 minutes of medical discussion* (work RVU recommendation = 0.75). The HCPAC chose to recommend the same time and work values at the code described to define physician work. The HCPAC agreed that 1 minute pre-service, 25 minutes intra-service and 10 minutes post-service time was appropriate for code 98968. **The HCPAC recommends a work RVU of 0.75 for 98968.**

#### 98969

Lastly, the HCPAC reviewed code 98969 *Online evaluation and management service provided by a qualified non-physician health care professional to an established patient*. The HCPAC concluded, that as the physician code 99444 *Online evaluation and management service provided by a physician to an established patient* (RUC recommendation = carrier-priced), the definition of work and health care professional time and complexity involved in this service was unclear, therefore making it difficult to recommend a specific work relative value. **The HCPAC recommends that code 98969 be carrier-priced for CY 2008.**

#### Practice Expense

The PERC and HCPAC reviewed the direct practice expenses for 98966-98968 in February 2007 when these services were initially presented. The practice expense input recommendations are the same as those recommended for the physician non face-to-face services. **The HCPAC recommends 3 minutes post-service phone call by and RN/LPN/MTA for 98966-98968.**

#### New Technology and New Work

**The HCPAC recommends that 98966-98968 be added to the new technology list to review changes in the valuation after experience in reporting these service has occurred (as the physician non face-to-face codes are also recommended to be added to the new technology list). Additionally, the HCPAC recommends that these services involve new work not currently compensated within the physician payment system.**

CPT Code (•New)	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Telephone services are non-face-to-face E/M services provided by a physician to a patient using the telephone. These codes are used to report episodes of care				

CPT Code (●New)	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
<u>by the physician initiated by an established patient or guardian of an established patient. If the telephone service ends with a decision to see the patient within 24 hours or next available urgent visit appointment, the code is not reported; rather the encounter is considered part of the preservice work of the subsequent E/M service, procedure and visit. Likewise if the telephone call refers to an E/M service performed and reported by the physician within the previous seven days (either physician requested or unsolicited patient follow-up) or within the period of the previously completed procedure, then the service(s) are considered part of that previous E/M service or procedure. (Do not report 99441-99443 if reporting 99441-99444 performed in the previous seven days.)</u>				
●99441	O1	Telephone evaluation and management service provided by a physician to an established patient, parent, or guardian not originating from a related E/M service provided within the previous seven days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 5-10 minutes of medical discussion	XXX	0.25  (RUC Recommendation)
●99442	O2	11-20 minutes of medical discussion	XXX	0.50  (RUC Recommendation)
●99443	O3	21-30 minutes of medical discussion  (Do not report 99441-99443 when using 99339-99340, 99374-99380 for the same call(s))  (Do not report 99441-99443 for anticoagulation management when reporting 99363-99364)	XXX	0.75  (RUC Recommendation)
<b><u>Online Medical Evaluation</u></b>  <u>An online electronic medical evaluation is a non-face-to-face E/M service by a physician to a patient using Internet resources in response to a patient's online inquiry. Reportable services involve the physician's personal timely response to the patient's inquiry and must involve permanent storage (electronic or hard copy) of the encounter. This service is reported only once for the same episode of care during a seven day period, although multiple physicians could report their exchange with the same patient. If the online medical evaluation refers to an E/M service previously performed and reported by the physician within the previous seven days (either physician requested or unsolicited patient follow-up) or within the postoperative period of the previously completed procedure, then the service(s) are considered covered by the previous E/M service or procedure. A reportable service encompasses the sum of communication (eg, related telephone calls, prescription provision, laboratory orders) pertaining to the online patient encounter.</u>				
●99444	O4	Online evaluation and management service provided by a physician to an established patient, guardian or health care provider not originating from a	XXX	Carrier Priced

CPT Code (•New)	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
		related E/M service provided within the previous 7 days, using the Internet or similar electronic communications network  (Do not report 99444 when using 99339-99340, 99374-99380 for the same communication(s)) (Do not report 99444 for anticoagulation management when reporting 99363 to 99364)		(RUC Recommendation)
<b>Telephone Calls</b>				
D 99371		<del>Telephone call by a physician to patient or for consultation or medical management or for coordinating medical management with other health care professionals (eg, nurses, therapists, social workers, nutritionists, physicians, pharmacists); simple or brief (eg, to report on tests and/or laboratory results, to clarify or alter previous instructions, to integrate new information from other health professionals into the medical treatment plan, or to adjust therapy)</del>	XXX	N/A
D 99372		<del>intermediate (eg, to provide advice to an established patient on a new problem, to initiate therapy that can be handled by telephone, to discuss test results in detail, to coordinate medical management of a new problem in an established patient, to discuss and evaluate new information and details, or to initiate new plan of care)</del>	XXX	N/A
D 99373		<del>complex or lengthy (eg, lengthy counseling session with anxious or distraught patient, detailed or prolonged discussion with family members regarding seriously ill patient, lengthy communication necessary to coordinate complex services of several different health professionals working on different aspects of the total patient care plan)</del>  (99371-99373 have been deleted. To report telephone evaluation and management services, see 99441-99443)	XXX	N/A
<b>Medicine Non-Face-to-Face Non-Physician Services</b>				

CPT Code (●New)	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
<b><u>Telephone Services</u></b>  <u>Telephone services are non-face-to-face assessment and management services provided by a qualified health care professional to a patient using the telephone. <b>Evaluation and Management</b> <b>Care Plan Oversight</b> <p>Care Plan Oversight Services are reported separately from codes for office/outpatient, hospital, home, nursing facility, or domiciliary, or non-face-to-face services. The complexity ...</p> <p>The work involved in providing very low intensity or infrequent supervision services is included in the pre- and post-encounter work for home, office/outpatient and nursing facility or domiciliary visit codes.</p> <p>(For care plan oversight services of patients in the home, domiciliary, or rest home (eg, assisted living facility) under the individual supervision of a physician, see 99339,99340)</p>				

CPT Code (●New)	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
(Do not report 99374-99380 for time reported with 993X1- 993X4, 98966-98969)				
<b>Case Management Services</b> <b>Anticoagulant Management</b> <i>Anticoagulant services are intended ....</i> <p>When reporting these services, the work of anticoagulant management may not be used as a basis for reporting an Evaluation and Management service or Care Plan Oversight time during the reporting period. Do not report these services with <del>99371-99373, 00741</del> 99444, 989XX1 – 989XX4 when telephone or on-line address anticoagulation with warfarin management. If a significant, separately identifiable E/M service is performed, report the appropriate E/M service code using modifier 25.</p>				

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 98966      Tracking Number   O5   Specialty Society Recommended RVU: **0.37**

Global Period: XXX

RUC Recommended RVU: **0.25**

CPT Descriptor: Telephone evaluation and management service provided by a qualified non-physician health care professional to an established patient, parent, or guardian not originating from a related E/M service provided within the previous seven days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 5-10 minutes of medical discussion

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 67 year old female with diabetes requested assistance in how to incorporate a new food product into her meal plan established 3 weeks ago with the Registered Dietitian (RD).

OR

A 40 year old male with a history of anterior cruciate ligament reconstruction of the left knee calls his physical therapist with a complaint of increased discomfort and edema around the knee after performing the home exercise program twice each day. The therapist asked the patient to summarize the home exercise program and a discrepancy was noted in the number of repetitions that the patient was performing and what had been recommended. The therapist reinforced the parameters of the recommended home exercise program, recommended the use of ice following the exercises and instructed the patient to keep their next scheduled therapy appointment. The telephone encounter lasted 10 minutes.

Percentage of Survey Respondents who found Vignette to be Typical: 98%

Is conscious sedation inherent to this procedure? No Percent of survey respondents who stated it is typical? 0%

Is conscious sedation inherent in your reference code? No

Description of Pre-Service Work: The qualified healthcare professional reviews the patient's phone inquiry, reviews the medical record and the previously prepared exercise program or nutrition plan and goals, and accesses resources to share and discuss with patient.

Description of Intra-Service Work: During the phone conversation, the RD reviews the product's serving size, carbohydrate content and the current meal plan with the patient. The RD counsels the patient on appropriate new product serving size, reinforced adherence to the meal plan, encouraged ongoing completion of food and blood glucose records and reminded patient of her next scheduled appointment.

OR

First, the therapist listened to the patient's complaints. The therapist then asked appropriate questions concerning the home exercise program and use of ice, use of medications, level of activity level during the day, use of a brace and use of an assistive device for gait. The therapist determined that the patient had not properly followed the home exercise instructions and was not applying ice following the home program. The therapist reviewed the home program, made the appropriate recommendations and instructed the patient to keep their next scheduled appointment.

Description of Post-Service Work: The qualified healthcare professional documents the patient interaction in the medical record, notifies the referring physician of the phone call with the patient, and directs staff to mail the summary of instructions provided and educational materials to patient.

**SURVEY DATA**

**INTENSITY/COMPLEXITY MEASURES (Mean)****Mental Effort and Judgment (Mean)**

The number of possible diagnosis and/or the number of management options that must be considered	3.57	3.21
The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	2.88	3.08
Urgency of medical decision making	3.45	2.96

**Technical Skill/Physical Effort (Mean)**

Technical skill required	3.40	3.63
Physical effort required	1.57	3.46

**Psychological Stress (Mean)**

The risk of significant complications, morbidity and/or mortality	3.18	2.83
Outcome depends on the skill and judgment of physician	3.82	3.63
Estimated risk of malpractice suit with poor outcome	3.38	3.08

**INTENSITY/COMPLEXITY MEASURES****CPT Code****Reference  
Service 1****Time Segments (Mean)**

Pre-Service intensity/complexity	1.74	2.50
Intra-Service intensity/complexity	3.43	3.71
Post-Service intensity/complexity	2.20	2.71

---

**Additional Rationale**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

ADA and APTA recommend the above RVU and Pre-, Intra-, and Post-service times even though both data sets had variability in the reported reference service codes. Based on the distinct services provided by both professionals, as described in the vignettes, and the professionals' experience completing the work survey, we anticipated differences in the reported reference service code.

---

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

---

**FREQUENCY INFORMATION**

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) Not previously reported

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty ADA                      How often? Commonly

Specialty APTA                      How often? Commonly

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 875000

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Compiled frequency estimates from MDs, APTA and ADA.

Specialty ADA              Frequency 775000                      Percentage 88.57 %

Specialty APTA              Frequency 100000                      Percentage 11.42 %

Specialty                      Frequency 0                      Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

462,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate.

Specialty ADA              Frequency 362000                      Percentage 78.35 %

Specialty APTA              Frequency 100000                      Percentage 21.64 %

Specialty                      Frequency 0                      Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

### Professional Liability Insurance Information (PLI)

Does the reference CPT code selected for physician work serve as a reasonable reference for PLI crosswalk? Yes

If no, please select another crosswalk and provide a brief rationale.

Indicate what risk factor the new/revised code should be assigned to determine PLI relative value. Non-Surgical

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 98967      Tracking Number 06      Specialty Society Recommended RVU: **0.45**  
Global Period: XXX      RUC Recommended RVU: **0.50**

CPT Descriptor: Telephone evaluation and management service provided by a qualified non-physician health care professional to an established patient, parent, or guardian not originating from a related E/M service provided within the previous seven days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 11-20 minutes of medical discussion.

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 68 year old male with insulin dependent diabetes, called the Registered Dietitian (RD) with a complaint of several mid-morning low blood sugar readings following the implementation of his 30-minute, new exercise regimen.

OR

A 54 year old woman with a history of rheumatoid arthritis and metacarpalphalangeal arthroplasties of her dominant hand called her occupational therapist because of post-operative pain and difficulty with use of the dynamic outrigger orthotic during the day and positioning at night. The therapist reviewed the patient's understanding of the instructions that had been provided at the last office visit and made specific recommendations regarding number of repetitions of the exercises, elevation of the extremity to help reduce edema, recommendations for positioning during the night, and use of cold applications for temporary pain relief. The telephone encounter lasted 15 minutes.

Percentage of Survey Respondents who found Vignette to be Typical: 88%

Is conscious sedation inherent to this procedure? No Percent of survey respondents who stated it is typical? 0%

Is conscious sedation inherent in your reference code? No

Description of Pre-Service Work: The qualified healthcare professional reviews the patient's phone inquiry, reviews the medical record and the previously prepared exercise program or nutrition plan and goals, and accesses resources to share and discuss with patient.

Description of Intra-Service Work: The RD verifies the patient's understanding of his hypoglycemia management and reviewed the patient's self-reported glucose monitoring records. After discussion of the prescribed meal plan provided at the last office visit, the RD reviews the patient's understanding of his meal plan and pre-workout meal regimen, and reinforces concepts to avoid hypoglycemia with future exercise.

OR

The therapist listened to the patient's complaints. The therapist then asked appropriate questions concerning tolerance to the orthotic (e.g. wearing time, exercise in the outrigger, pressure points), elevation of the extremity during the day and night, medication use, home exercise program, and management of ADLs. Recommendations were made regarding the specific exercises that should be performed including number of repetitions and frequency, positioning of the limb during the day and at night, precautions regarding skin integrity and protection of the sutures, and use of ice to help control pain.

Description of Post-Service Work: The qualified healthcare professional documents the patient interaction in the medical record, notifies the referring physician of the phone call with the patient, and directs staff to mail the summary of instructions provided and educational materials to patient.

**Additional Rationale**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

ADA and APTA recommend the above RVU and Pre-, Intra-, and Post-service times even though both data sets had variability in the reported reference service codes. Based on the distinct services provided by both professionals, as described in the vignettes, and the professionals' experience completing the work survey, we anticipated differences in the reported reference service code.

---

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

---

**FREQUENCY INFORMATION**

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) Not previously reported

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty ADA                      How often? Commonly

Specialty APTA                      How often? Commonly

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 567100

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Compiled frequency estimates from MDs, APTA and ADA.

Specialty ADA	Frequency 467100	Percentage 82.36 %
---------------	------------------	--------------------

Specialty APTA	Frequency 100000	Percentage 17.63 %
----------------	------------------	--------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

359,500 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate.

Specialty ADA	Frequency 259500	Percentage 72.18 %
---------------	------------------	--------------------

Specialty APTA	Frequency 100000	Percentage 27.81 %
----------------	------------------	--------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Do many physicians perform this service across the United States? Yes

### Professional Liability Insurance Information (PLI)

Does the reference CPT code selected for physician work serve as a reasonable reference for PLI crosswalk? Yes

If no, please select another crosswalk and provide a brief rationale.

Indicate what risk factor the new/revised code should be assigned to determine PLI relative value. Non-Surgical

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

---

CPT Code: 98968      Tracking Number 07      Specialty Society Recommended RVU: **0.50**

Global Period: XXX

RUC Recommended RVU: **0.75**

CPT Descriptor: Telephone evaluation and management service provided by a qualified non-physician health care professional to an established patient, parent, or guardian not originating from a related E/M service provided within the previous seven days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 21-30 minutes of medical discussion.

---

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 65 year old female with congestive heart failure calls the Registered Dietitian (RD) based on concerns about lower extremity edema following consumption of foods served at a family reunion.

OR

The parent of an 15 year old male with a history of recent T10 spinal cord injury called the physical therapist regarding the recommended home exercise program, proper positioning and seating in the wheelchair, and a newly discovered area of skin irritation on the right buttock. The therapist inquired as to the current exercise program that was being followed including the frequency and intensity of the exercises, the length of time the patient was spending in the wheelchair, the extent of the patient's management of his transfers and mobility in the wheelchair as well as specific inquiries concerning the area of possible skin breakdown on the buttocks. The therapist reviewed and modified the home program, and made recommendations regarding the length of time continuously spent in the wheelchair and precautions to maintain skin integrity. It was recommended that the patient return for follow-up within one week unless the skin irritation did not improve or worsened.

Percentage of Survey Respondents who found Vignette to be Typical: 72%

Is conscious sedation inherent to this procedure? No Percent of survey respondents who stated it is typical? 0%

Is conscious sedation inherent in your reference code? No

Description of Pre-Service Work: The qualified healthcare professional reviews the patient's phone inquiry, reviews the medical record and the previously prepared exercise program or nutrition plan and goals, and accesses resources to share and discuss with patient.

Description of Intra-Service Work: The RD reviews the patient's recent food intake and compared it to the prescribed meal pattern- paying particular attention to sodium and fluid consumption. The RD identifies high sodium foods that contributed to the patient's current symptoms, and counsels the patient on lower sodium alternatives. The RD counsels the patient on her daily fluid recommendations and encouraged the patient to measure her fluid consumption and body weight daily. The RD instructs the patient to call and report any weight fluctuation greater than 2-3 lbs/day. The RD recommends that the patient return for follow-up in 1-2 weeks unless rapid weight gain, increased shortness of breath, or other symptoms of worsening heart failure occurred in which case the patient is told to call her physician.

or

The therapist listened to the patient's complaints and parental concerns. The therapist then asked appropriate questions of the patient and parent concerning the time spent in the wheelchair in and out of the home environment, level of activity during the day while in the chair, description of the skin irritation on the buttocks, participation in the home exercise program and management of mobility, transfers in and out of the wheelchair and ADLs. The therapist made recommendations concerning transfer techniques in and out of the chair to reduce friction force on the buttocks, duration of sitting time in the wheelchair including recommendations to spend additional time each day lying prone so that the skin irritation could heal. Recommendations were also made concerning pressure relief strategies while in the chair and revisions to the home exercise program were suggested. The therapist recommended a follow-up visit within one week unless the skin irritation did not improve or worsened.

Description of Post-Service Work: The qualified healthcare professional documents the patient interaction in the medical record, notifies the referring physician of the phone call with the patient, and directs staff to mail the summary of instructions provided and educational materials to patient.

**INTENSITY/COMPLEXITY MEASURES (Mean)****Mental Effort and Judgment (Mean)**

The number of possible diagnosis and/or the number of management options that must be considered	3.91	3.64
The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	3.53	3.55
Urgency of medical decision making	4.09	3.32

**Technical Skill/Physical Effort (Mean)**

Technical skill required	3.96	3.95
Physical effort required	1.87	3.27

**Psychological Stress (Mean)**

The risk of significant complications, morbidity and/or mortality	4.21	3.23
Outcome depends on the skill and judgment of physician	4.19	4.05
Estimated risk of malpractice suit with poor outcome	3.98	3.36

**INTENSITY/COMPLEXITY MEASURES****CPT Code****Reference  
Service 1****Time Segments (Mean)**

Pre-Service intensity/complexity	2.11	2.32
Intra-Service intensity/complexity	4.09	4.18
Post-Service intensity/complexity	2.91	2.77

---

**Additional Rationale**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

ADA and APTA recommend the above RVU and Pre-, Intra-, and Post-service times even though both data sets had variability in the reported reference service codes. Based on the distinct services provided by both professionals, as described in the vignettes, and the professionals' experience completing the work survey, we anticipated differences in the reported reference service code.

---

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

---

**FREQUENCY INFORMATION**

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) Not previously reported

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty ADA                      How often? Commonly

Specialty                              How often?

Specialty                              How often?

Estimate the number of times this service might be provided nationally in a one-year period? 383907

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

Specialty ADA              Frequency 283907                      Percentage 73.95 %

Specialty APTA              Frequency 100000                      Percentage 26.04 %

Specialty                      Frequency 0                      Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

232,667 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate.

Specialty ADA              Frequency 132667                      Percentage 57.02 %

Specialty APTA              Frequency 100000                      Percentage 42.97 %

Specialty                      Frequency                      Percentage                      %

Do many physicians perform this service across the United States?

### Professional Liability Insurance Information (PLI)

Does the reference CPT code selected for physician work serve as a reasonable reference for PLI crosswalk? Yes

If no, please select another crosswalk and provide a brief rationale.

Indicate what risk factor the new/revised code should be assigned to determine PLI relative value. Non-Surgical

**Specialty Society Update Process**  
**PERC Summary of Recommendation**  
**XXX Global Period**  
**Non Facility Direct Inputs**

CPT Long Descriptor: Telephone evaluation and management service provided by a qualified non-physician health care professional to an established patient, parent, or guardian not originating from a related E/M service provided within the previous seven days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 5-10 minutes of medical discussion.

*Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:*

The American Dietetic Association utilized an expert panel to discuss and prepare practice expense recommendations for the non-face-to-face codes, 98966-X4. The expert panel consisted of six registered dietitian practitioners from a variety of practice settings and geographical locations. The American Physical Therapy Association convened a group of five physical therapists familiar with the services described by the codes was consulted. Their consensus opinion was then coordinated with other societies who surveyed similar codes (993X1 - X4).

Both expert panels' data and description of the clinical staff's pre- and post-service activities were identical, so both group's data was merged.

*Please describe the clinical activities of your staff:*

Pre-Service Clinical Labor Activities:

The clinical staff receives the call from the patient. Clinical staff requests the patient's medical record and collects the health care professional's documentation note from the patient's last appointment. Clinical staff discusses patient's phone inquiry with the health care professional. The decision is made to have the health care professional call the patient to discuss the problem.

Intra-Service Clinical Labor Activities:

NA

Post-Service Clinical Labor Activities:

The clinical staff collects materials discussed over the call from the health care professional and mails educational print materials and summary of exercise or nutrition plan to the patient and physician. The patient's chart is filed in the health care professional's office.

DEPARTMENT OF HEALTH & HUMAN SERVICES

Centers for Medicare & Medicaid Services

*Administrator*

Washington, DC 20201

**MAY 29 2008**

William L. Rich, III, M.D., F.A.C.S.  
American Medical Association  
515 North State Street  
Chicago, IL 60610

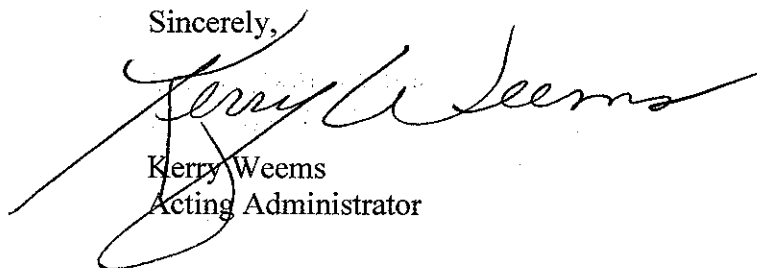

Dear Dr. Rich:

The Centers for Medicare & Medicaid Services (CMS) appreciates the extraordinary efforts of the American Medical Association/Specialty Society RVS Update Committee (RUC) in determining the values for care management services furnished to beneficiaries under a new Medical Home Demonstration project. CMS applauds the conscientious manner in which the RUC approached this very important task and the professionalism that marks your recommendations.

We also appreciate the RUC's suggestions to look closely at clinical, as well as fiscal, endpoints in evaluating the overall value of medical home services. There will be many determinants of success with regard to medical home care and CMS recognizes the need to examine a variety of metrics in our evaluation. We will take your suggestions under advisement as we prepare to design the evaluation of the Medical Home Demonstration.

Once again may we express our sincere appreciation for the work of the RUC and its workgroup in supporting the Medical Home Demonstration project.

Sincerely,

Kerry Weems  
Acting Administrator

**AMA/Specialty Society RVS Update Committee  
Medicare Medical Home Demonstration Project  
April 25, 2008**

Workgroup Members: David Hitzeman, DO (Chairman), Joel Brill, MD, Thomas Felger, MD, Meghan Gerety, MD, Charles Koopman, MD, Barbara Levy, MD, Leonard Lichtenfeld, MD, Chester Schmidt, Jr., MD, Richard Tuck, MD, John Wilson, MD, Robert Zwolak, MD, Alan Lazaroff, MD, (Ex Officio), William L. Rich, III, MD, (Ex Officio), and William Thorwarth, Jr., MD, (Ex Officio),

**Introduction**

The RUC Medical Home Workgroup was established at the February 2008 RUC Meeting following a request from the Centers for Medicare and Medicaid Services (CMS) based on a legislative mandate resulting from the Tax Relief and Health Care Act of 2006 (TRHCA). Section 204 of the TRHCA directs CMS to conduct a three-year demonstration project of the medical home concept of patient care. This demonstration is to occur in rural, urban, and underserved areas in up to eight states. The legislation describes the medical home as large or small medical practices where a physician provides comprehensive and coordinated patient centered medical care and acts as the “personal physician” to the patient. Based on this directive, CMS designed a three-tiered system of the medical homes based on the capabilities of the physician office serving as medical home. The differentiation of the tiers is based on capabilities of the physician office as determined by CMS and not based on the severity of patient illness. Further, the TRHCA specifically instructs CMS to set a care management fee using the RUC process. Therefore, CMS asked the RUC to recommend a valuation of a management fee by May 1, 2008. The TRHCA also mandates that this demonstration project be “cost neutral,” in the sense that the costs of this project are to be offset by the overall savings it generates. This definition of “cost neutrality” is dissimilar to the ordinary meaning of budget neutrality within the payment policy lexicon. Rather, the cost neutrality of the demonstration project will not affect the payment or valuation of any service in the Medicare physician payment schedule and will result in no adjustment to conversion factor.

The Workgroup was charged with the task of researching and facilitating work relative value recommendations and direct practice expense recommendations for services defined in the Medicare Medical Home demonstration project to the RUC at the April 2008 RUC meeting. Given the brief time in which to develop a recommendation, the Workgroup began immediately by initiating an electronic discussion among its members and facilitating conference call meetings on a weekly basis. The Workgroup met 11 times between February 12 and April 21 by conference call. The Workgroup also met face-to-face on Wednesday April 23 immediately preceding the April 2008 RUC Meeting. Based on these discussions, the Workgroup developed the following recommendations for descriptors, physician work, direct practice expense inputs, and professional liability insurance crosswalks for the Medical Home demonstration project. To the extent practicable, the Workgroup utilized the standard RUC processes. However,

based on the information regarding eligibility of beneficiaries and practice requirements, some assumptions were made.

### **G-Code Descriptors**

The Workgroup first worked to develop G code descriptors for each of the three tiers of the Medical Home based on the minimum requirements for inclusions within each tier as provided by Mathematica. Initially, CMS indicated an interest in developing two levels of coding and payment within each of the three tiers based on the complexity and/or number of chronic conditions of eligible beneficiaries. The Workgroup determined that any distinction between complexity of patients and the ability of a practice to designate a beneficiary into one of the categories would be arbitrary. The number of chronic conditions is not a strong indicator for complexity or difficulty of coordinating care. A patient with one chronic condition may require greater intensity of coordination than a patient with several chronic conditions. Therefore, the Workgroup decided, and Medicare representatives agreed, that a single code per tier describing the work for the typical patient would be most appropriate.

To develop the G codes, the Workgroup turned to the Mathematica proposals for the description of a Tier 3 (the most comprehensive) medical home. After reviewing the list of criteria for a Tier 3 medical home, the Workgroup transposed the requirements into a description of the service provided on a monthly basis. The Workgroup repeated this process for each of the tiers. As CMS made changes to the requirements of each tier of the medical home, the Workgroup appropriately revised the G code descriptors. The proposed descriptors represent the most up-to-date CMS-required components for each tier of the medical home. A Tier 1 Medical Home (entry level) requires ten of the designated core capabilities. A Tier 2 Medical Home (typical) requires sixteen of the designated core capabilities. A Tier 3 Medical Home (optimal) requires eighteen of the designated requirements and three of an additional ten requirements. (See “Table 2. Proposed Method for Tiering Medical Home Qualification”). The CMS demonstration is likely to use a modified version of the NCQA Physician Practice Connection - Patient-Centered Medical Home instrument to determine practice eligibility and tier assignment. **The RUC recommends the attached G Code descriptors for the Tier 1, Tier 2 and Tier 3 Medical Home to CMS for the Medicare Medical Home demonstration project.**

The RUC understands that eligible physicians will be designated into a tier level based on CMS recognition of their office capabilities. These capabilities will be monitored by CMS. Practices may and are encouraged to qualify for a higher tier level during the demonstration, but only upon approval by CMS.

### **Average Panel Size**

The Workgroup next addressed the issue of average panel size per primary care physician in order to assist in the development of work and direct practice expense input recommendations. The Workgroup looked to several sources to define total panel size for a primary care physician, Medicare beneficiary portion of that panel, and the portion

of Medicare beneficiaries that would be eligible for the participation in the demonstration project.

- Mathematica provided the Workgroup with a rough estimate of the number of Medicare beneficiaries per primary care physician. They obtained these estimates using 2004-2006 Medicare claims data and the 2000-2002 Community Tracking Study Physician Survey. Mathematica indicated that there are roughly 257 unique Medicare beneficiaries seen by a typical individual primary care physician (family practice, general internal medicine, or general practice) in one year. Mathematica went on to state that a physician typically will not see all patients within a panel in any given twelve months, resulting in a potentially larger total Medicare panel size. They estimate this to be as much as 30% higher, bringing total Medicare panel size 335. CMS has indicated that it will rely on beneficiary eligibility criteria for the demonstration project that will expand inclusion to 86% of all beneficiaries based on the Hwang criteria. Based on this assumption, the panel size of eligible beneficiaries per primary care physician will be between 221 and 284. Based on all Mathematica assumptions and CMS-stated patient eligibility criteria, a panel size of 250 is a reasonable estimate.
- Staff requested information from the Medical Group Management Association (MGMA) on average total panel size per primary care physician. The MGMA does not benchmark “panel size,” primarily because there are many variables that can skew these figures. However, the organization does track one related metric from the “Cost Survey Report” – that of “Patients per Physician,” from the data table titled: “Staffing, RVUs, Patients, Procedures and Square Footage.” That table reports data for unique patients seen in the previous year. Based on this the “Cost Survey for Single-specialty Practices: 2007 Report Based on 2006 Data,” for Family Practice, the average number of patients per FTE physician is 2,362. U.S. Census data indicate that 12% of the population are 65 years of age or older. The number of family medicine patients would therefore be approximately 283. If 86% were eligible for the demonstration (per CMS current criteria), 245 patients per family physician would be eligible. The review of MGMA data, census data, and CMS assumptions again concludes that 250 is a reasonable estimate for eligible patients per physician.
- Lastly, the Workgroup looked to current “medical homes” as a source of information on total panel size and Medicare panel size. Specifically, the Geisinger Health System, very generously shared a wealth of its data with the Workgroup. In January 2007, Geisinger implemented an intensive medical home project in two practice sites. The description of this project resembles a Tier 3 Medical Home. In these two initial sites, the Geisinger representatives indicated that there were 250 Medicare “medical home” patients per physician.

**Reviewing all available data and assumptions, the RUC developed recommendations assuming that each physician may have approximately 250 Medicare patients who will be eligible and who will agree to participate in the practice’s medical home.**

## **Physician Work**

### Tier 3 Medical Home

The Workgroup estimates that for the “very sick” patients, the physician will typically spend 15 minutes per patient per month. This estimate is based on two other estimates. One is that the physician will spend approximately 12.5 minutes per patient per month in interaction with the case manager and the rest of the clinical staff team; this estimate is derived from the PACE data previously discussed by the Workgroup.

The 12.5 minutes includes the following coordination of care activities described by Total Longterm Care, a PACE program provider in Denver, CO:

- Intake and Assessment: This occurs twice weekly. 1-2 new participants and 15 reassessments are reviewed at each meeting. (Complete reassessments are done every six months). Each meeting lasts about 2.5 hours.
- Morning meeting: this occurs every morning. About 10-15 patients are discussed. Issues for the day are reviewed, including interim progress reports and care planning and follow-up. Duration about 45 minutes daily.
- Nursing home review meeting. This occurs weekly. The program uses nursing homes (and sends in its own staff to augment the NH services) for short term “medical respite” as an alternative to avoid or shorten hospital stays. The meeting lasts about 30-60 minutes, during which the progress and transition plans for about 10 patients are reviewed and developed.
- End-of-life nurse meeting. The physician meets weekly for about thirty minutes with a nurse whose focus is end-of-life care. This typically involves perhaps 4 patients.
- Ad-hoc family meetings occur irregularly, typically involve multiple staff members including the physician, and generally last more than 30 minutes.

The remaining 2.5 minutes per patient per month is estimated to be the time the physician will spend in other medical home responsibilities not included within the PACE program, such as review of registry information, or other daily interactions with the health care team.

For the blend of other “sick” patients, it is estimated that the physician will spend only 10 minutes per patient per month. This recognizes that these patients will require less physician interaction with the case manager and other members of the clinical staff team and is similar to the reduction in clinical staff time associated with “sick” and “very sick” patients (discussed within practice expense section).

The Workgroup also assumed, based on data from the Wolff study<sup>i</sup> (see page 9-10 for discussion), that the typical patient in the demonstration project will have seven evaluation and management (E/M) visits per year. The Workgroup concluded that 2.8 of these visits will be at the level of 99214 and 4.2 will be at the level of 99213. This assumption is based on the 2007 Medicare utilization data that show a total utilization of

99213 and 99214 with a relationship between them of roughly 1.5 : 1. Extrapolated to the seven E/M visits, this correlates to 4.2 : 2.8. Finally, half of the post-service physician time associated with each of these visits will otherwise duplicate the physician time related to the proposed care management code and, thus, should be deducted from the physician time per patient per month otherwise attributable to the proposed codes. The post-service physician time for 99214 is 10 minutes, and for 99213, it is 5 minutes.

<b>2007 Medicare Utilization Data</b>			
<b>Code</b>	<b>Family Medicine</b>	<b>Internal Medicine</b>	<b>Total</b>
99213	21,382,656	26,581,566	103,587,751
99214	13,467,111	18,564,247	65,129,891

The physician time per patient per month before accounting for the overlap with existing E/M services is 11.25 minutes, which is calculated as a weighted average of the time spent with each patient cohort as follows: (15 minutes x 0.25) + (10 minutes x 0.75) = 11.25 minutes. The overlap with existing E/M services is calculated as 2.1 minutes per patient per month as follows: ((10 minutes x 2.8 99214 visits) + (5 minutes x 4.2 99213 visits)) / 2 = 24.5 minutes per patient per year; 24.5 minutes / 12 months = 2.04 minutes per patient per month. The unduplicated physician time per patient per month is calculated as follows: 11.25 minutes – 2.04 minutes = 9.21 minutes per patient per month.

**The RUC recommends an intra-service time per patient per month of 9.2 minutes for a Tier 3 Medical Home.**

The Workgroup used a modified building block methodology to develop a recommendation for physician work. Relying on the same ratio of 99213 to 99214 visits for this population of patients, the Workgroup agreed that a similar intensity of medical home services was appropriate. The Workgroup instead used a total intensity of the time by calculating the total work per unit of total time. For 99213, the total work per unit of time is equal to 0.92 work RVUs divided by 23 total minutes, resulting in 0.040 work RVUs per minute. For 99214, the total work per unit of time is equal to 1.42 work RVUs divided by 40 total minutes, resulting in 0.0355 work RVUs per minute. The Workgroup then applied the same 4.2 : 2.8 ratio it used to develop physician time overlap from associated E/M work. Thus, 0.040 was multiplied by 4.2 and 0.0355 was multiplied by 2.8 and the sum was divided by 7. This resulted in a weighted work RVU per minute of 0.0382. The Workgroup then multiplied 0.0382 by 9.2 minutes to come to a work RVU recommendation of 0.35144.

The Workgroup noted that 99339, *Individual physician supervision of a patient (patient not present) in home, domiciliary or rest home; 15-29 minutes*, with a work RVU of 1.25 is an appropriate reference service, comparing the 40 minutes of total time with the 9.2 minutes of time in the Tier 3 Medical Home, resulting in a comparable work RVU of .31.

**The RUC recommends a work RVU per patient per month of 0.35 for a Tier 3 Medical Home.**

## Tier 2 Medical Home

The Workgroup estimates that for the “very sick” patients, the physician will spend 12.5 minutes per patient per month. This estimate assumes that, at lower tiers, the physician will spend less time per patient per month consistent with the decreased capability of the practice as a medical home. This estimate is also consistent with assumptions made with respect to clinical staff time (i.e., staff will spend less time per patient per month at lower tiers of the medical home).

For the blend of other “sick” patients, it is estimated that the physician will spend only 9 minutes per patient per month. This recognizes that these patients will require less physician interaction with the case manager and other members of the clinical staff team and is similar to the reduction in clinical staff time associated with “sick” and “very sick” patients (discussed within practice expense section).

The Workgroup also assumed, based on data from the Wolff study<sup>i</sup> (see page 9-10 for discussion), that the typical patient in the demonstration project will have seven evaluation and management (E/M) visits per year. The Workgroup concluded that 2.8 of these visits will be at the level of 99214 and 4.2 will be at the level of 99213. This assumption is based on the 2007 Medicare utilization data that show a total utilization of 99213 and 99214 with a relationship between them of roughly 1.5 : 1. Extrapolated to the seven E/M visits, this correlates to 4.2 : 2.8. Finally, half of the post-service physician time associated with each of these visits will otherwise duplicate the physician time related to the proposed care management code and, thus, should be deducted from the physician time per patient per month otherwise attributable to the proposed codes. The post-service physician time for 99214 is 10 minutes, and for 99213, it is 5 minutes.

<b>2007 Medicare Utilization Data</b>			
<b>Code</b>	<b>Family Medicine</b>	<b>Internal Medicine</b>	<b>Total</b>
99213	21,382,656	26,581,566	103,587,751
99214	13,467,111	18,564,247	65,129,891

The physician time per patient per month before accounting for the overlap with existing E/M services is 9.875 minutes, which is calculated as a weighted average of the time spent with each patient cohort as follows:  $(12.5 \text{ minutes} \times 0.25) + (9 \text{ minutes} \times 0.75) = 9.875 \text{ minutes}$ . The overlap with existing E/M services is calculated as 2.1 minutes per patient per month as follows:  $((10 \text{ minutes} \times 2.8 \text{ 99214 visits}) + (5 \text{ minutes} \times 4.2 \text{ 99213 visits})) / 2 = 24.5 \text{ minutes per patient per year}$ ;  $24.5 \text{ minutes} / 12 \text{ months} = 2.04 \text{ minutes per patient per month}$ . The unduplicated physician time per patient per month is calculated as follows:  $9.875 \text{ minutes} - 2.04 \text{ minutes} = 7.835 \text{ minutes per patient per month}$ .

**The RUC recommends an intra-service time per patient per month of 7.8 minutes for a Tier 2 Medical Home.**

The Workgroup used a modified building block methodology to develop a recommendation for physician work. Relying on the same ratio of 99213 to 99214 visits for this population of patients, the Workgroup agreed that a similar intensity of medical home services was appropriate. The Workgroup instead used a total intensity of the time by calculating the total work per unit of total time. For 99213, the total work per unit of time is equal to 0.92 work RVUs divided by 23 total minutes, resulting in 0.040 work RVUs per minute. For 99214, the total work per unit of time is equal to 1.42 work RVUs divided by 40 total minutes, resulting in 0.0355 work RVUs per minute. The Workgroup then applied the same 4.2 : 2.8 ratio it used to develop physician time overlap from associated E/M work. Thus, 0.040 was multiplied by 4.2 and 0.0355 was multiplied by 2.8 and the sum was divided by 7. This resulted in a weighted work RVU per minute of 0.0382. The Workgroup then multiplied 0.0382 by 7.8 minutes to come to a work RVU recommendation of 0.29796.

The Workgroup noted that 99339, *Individual physician supervision of a patient (patient not present) in home, domiciliary or rest home; 15-29 minutes*, with a work RVU of 1.25 is an appropriate reference service, comparing the 40 minutes of total time with the 7.8 minutes of time in the Tier 2 Medical Home, resulting in a comparable work RVU of .31.

**The RUC recommends a work RVU per patient per month of 0.30 for a Tier 2 Medical Home.**

Tier 1 Medical Home

The Workgroup estimates that for the “very sick” patients, the physician will spend 10 minutes per patient per month. This estimate again assumes that, at lower tiers, the physician will spend less time per patient per month consistent with the decreased capability of the practice as a medical home. This estimate is also consistent with assumptions made with respect to clinical staff time (i.e., staff will spend less time per patient per month at lower tiers of the medical home).

For the blend of other “sick” patients, it is estimated that the physician will spend only 8 minutes per patient per month. This recognizes that these patients will require less physician interaction with the case manager and other members of the clinical staff team and is similar to the reduction in clinical staff time associated with “sick” and “very sick” patients (discussed within practice expense section).

The Workgroup also assumed, based on data from the Wolff study<sup>i</sup> (see page 9-10 for discussion), that the typical patient in the demonstration project will have seven evaluation and management (E/M) visits per year. The Workgroup concluded that 2.8 of these visits will be at the level of 99214 and 4.2 will be at the level of 99213. This assumption is based on the 2007 Medicare utilization data that show a total utilization of 99213 and 99214 with a relationship between them of roughly 1.5 : 1. Extrapolated to the seven E/M visits, this correlates to 4.2 : 2.8. Finally, half of the post-service physician time associated with each of these visits will otherwise duplicate the physician time related to the proposed care management code and, thus, should be deducted from

the physician time per patient per month otherwise attributable to the proposed codes. The post-service physician time for 99214 is 10 minutes, and for 99213, it is 5 minutes.

<b>2007 Medicare Utilization Data</b>			
<b>Code</b>	<b>Family Medicine</b>	<b>Internal Medicine</b>	<b>Total</b>
99213	21,382,656	26,581,566	103,587,751
99214	13,467,111	18,564,247	65,129,891

The physician time per patient per month before accounting for the overlap with existing E/M services is minutes, which is calculated as a weighted average of the time spent with each patient cohort as follows:  $(10 \text{ minutes} \times 0.25) + (8 \text{ minutes} \times 0.75) = 8.5 \text{ minutes}$ . The overlap with existing E/M services is calculated as 2.1 minutes per patient per month as follows:  $((10 \text{ minutes} \times 2.8 \text{ 99214 visits}) + (5 \text{ minutes} \times 4.2 \text{ 99213 visits})) / 2 = 24.5 \text{ minutes per patient per year}$ ;  $24.5 \text{ minutes} / 12 \text{ months} = 2.04 \text{ minutes per patient per month}$ . The unduplicated physician time per patient per month is calculated as follows:  $8.5 \text{ minutes} - 2.04 \text{ minutes} = 6.46 \text{ minutes per patient per month}$ .

**The RUC recommends an intra-service time per patient per month of 6.5 minutes for a Tier 1 Medical Home.**

The Workgroup used a modified building block methodology to develop a recommendation for physician work. Relying on the same ratio of 99213 to 99214 visits for this population of patients, the Workgroup agreed that a similar intensity of medical home services was appropriate. The Workgroup instead used a total intensity of the time by calculating the total work per unit of total time. For 99213, the total work per unit of time is equal to 0.92 work RVUs divided by 23 total minutes, resulting in 0.040 work RVUs per minute. For 99214, the total work per unit of time is equal to 1.42 work RVUs divided by 40 total minutes, resulting in 0.0355 work RVUs per minute. The Workgroup then applied the same 4.2 : 2.8 ratio it used to develop physician time overlap from associated E/M work. Thus, 0.040 was multiplied by 4.2 and 0.0355 was multiplied by 2.8 and the sum was divided by 7. This resulted in a weighted work RVU per minute of 0.0382. The Workgroup then multiplied 0.0382 by 6.5 minutes to come to a work RVU recommendation of 0.2483.

It was noted that the work RVU for 99441, *Telephone evaluation and management service provided by a physician; 5-10 minutes*, is 0.25, which appeared to the Workgroup to be an appropriate floor for the medical home physician work.

**The RUC recommends a work RVU per patient per month of 0.25 for a Tier 1 Medical Home.**

## Summary

In sum, the following times and work RVUs are proposed for each tier:

Tier	Physician Time	Work RVUs
1	6.5 minutes	0.25
2	7.8 minutes	0.30
3	9.2 minutes	0.35

## **Direct Practice Expense Inputs**

### Clinical Staff Type

Based on the G-Code descriptors, the workgroup agreed that the minimum competency for clinical staff should be no less than a registered nurse or licensed practical nurse and recommends using the blended Medicare clinical staff type of registered nurse/licensed practical nurse (RN/LPN). The clinical staff type is consistent across all tiers and the blended staff type is recommended in each of the three medical home tiers. Although Geinsinger reported that only RNs would be hired, the Workgroup understood that many practiced may not be able to hire RNs. Concurrently, the Workgroup recognized that in some states, medical assistants (MAs) may not be licensed to perform many of the activities inherent in the medical home service. As such, the Workgroup agreed that a RN/LPN blend is appropriate. **The RUC recommend to CMS that it use a clinical staff type of RN/LPN for the practice expense inputs for the Tier 1, Tier 2 and Tier 3 Medical Homes.**

### Clinical Staff Time

The Workgroup arrived at a typical amount of staff time by employing both top-down and bottom-up approaches. After an extensive review of medical home and care management literature and discussions with practitioners in the medical home clinical settings, the Workgroup found that the mode for caseload per nurse in a Tier 3 setting is 125, Tier 2 setting is 150, and Tier 1 setting is 200.

The workgroup next arrived at a similar number by dividing patient complexity into two groups, “sick” and “sicker.” Rather than split the medical home G codes into two categories as originally recommended, the workgroup noted that patients will move in and out of the two groups regularly and to assign an individual patient to a group is not realistic. However, risk-adjusting the groups under the assumption that at any given time only 25% of an eligible patient mix require extensive care management (“sicker”) and the remaining 75% require less extensive care management (“sick”) is a more accurate and efficient way to allot clinical staff time. Further, the workgroup assumed that the typical medical home patient in all three tiers will have 7 evaluation and management (E/M) visits per year, based on the Wolff study<sup>i</sup> and the Partnership for Solutions report<sup>ii</sup>, which relies on the Agency for Healthcare Research and Quality (AHRQ) Medical Expenditure Panel Survey of 2001 summarized below:

Number of Conditions	E/M Visits per Year	% of Medicare population	Visits x Medicare %	Weighted Average
Medicare Pts. with 1 condition	3.5	0.173	0.210976	0.738415
Medicare Pts. with 2 conditions	5.7	0.218	0.265854	1.515366
Medicare Pts. with 3 conditions	7.9	0.188	0.229268	1.81122
Medicare Pts. with 4 or more conditions	9.4	0.241	0.293902	2.762683
Average # of Medicare Visits		0.82		<b>6.827683</b>

The workgroup then reduced the clinical staff time by 3 minutes per patient in each of the three tiers to account for overlap of one phone call per month due to the E/M services provided. Each E/M (7 annually) requires 2 nurse follow-up phone calls per the implemented practice expense input data, leading to approximately 14 calls per year. The Workgroup agreed that these phone calls should not be duplicated and removed one from each month. (14/12 = approximately 1 call or 3 minutes per month.) The clinical staff time based on this methodology for each of the three tiers is included in the attached spreadsheet.

	<b>Pts per RN/LPN</b>	<b>Time spent per Bene min/mo</b>	<b>Sum min/month</b>
<b>Tier 3</b>			
Sick Patients (75%)	94	60	5625
Very Sick Pts (25%)	31	236	4775
	125	83	10400
Remove 3 minute call		<b>80</b>	
<b>Tier 2</b>			
Sick Patients (75%)	112.5	40	4500
Very Sick Pts (25%)	37.5	157	5900
	150	69	10400
Remove 3 minute call		<b>66</b>	
<b>Tier 1</b>			
Sick Patients (75%)	150	30	4500
Very Sick Pts (25%)	50	118	5900
	200	52	10400
Remove 3 minute call		<b>49</b>	

**The RUC recommend to CMS that it use clinical staff time of 80 minutes per patient per month for a Tier 3 medical home, 66 minutes per patient per month for a Tier 2**

medical home, and 49 minutes per patient per month for a Tier 1 medical home. The RUC acknowledges that these recommendations are estimates based on information that was available to the Workgroup regarding patient eligibility and nurse case manager caseload. These data may be highly variable by practice. The RUC strongly urges CMS to monitor the actual resource costs during the demonstration project. At a minimum, the RUC recommends that CMS survey participating practices regarding their nurse case manager caseload.

#### Medical Supplies

Over the course of a complete year, the workgroup agreed that the typical medical home patient will receive three patient education brochures. Divided over twelve months, the total number of booklets per month is 0.25. **The RUC recommend to CMS 0.25 of a patient education booklet as a practice expense input for the Tier 1, Tier 2 and Tier 3 Medical Homes.**

#### Medical Equipment

The legislation mandating the Medical Home Demonstration Project calls for use of an electronic medical records system. The Tier 3 medical home G-Code includes implementation and use of an EMR system and the workgroup discussed at length the type and capabilities of such a system. Based on these discussions, review of literature, and preliminary findings of the ongoing physician practice information survey, and a detailed invoice, the workgroup has developed a recommendation for the necessary elements of an appropriate EMR system. The system should include the following elements, listed below. For several of these components, CMS currently maintains a pricing input. For those line items that are not included within the CMS list of equipment, a price from the attached invoice has been included.

**The RUC recommend to CMS that the Tier 3 Medical Home include direct practice expense inputs for an Electronic Medical Records system consistent with the system element descriptions below.**

#### *EMR System Elements for a Tier 3 Medical Home*

Software: Comprehensive electronic health record software system that includes the following:

- a. Disease Management
- b. Point of care evidence-based decision support
- c. Electronic prescribing
- d. Laboratory test result tracking
- e. Automatic problem lists
- f. Referral History
- g. Diagnostic Imaging Storage
- h. Statistical Analysis
- i. Patient Registries
- j. Medication lists

- k. Reporting
- l. Patient Education Materials
- m. Workflow coordination
- n. Secure Electronic Communication with patients

Hardware: Using a server model, the electronic health record would require:

- a. One server
- b. One desktop computer with monitor
- c. Router
- d. Firewall
- e. Cable/DSL Modem

Other practice expenses related to the electronic health record include:

- a. Maintenance/service contract for hardware, software, internal network, and Internet connections (i.e., system support)
- b. Training services
- c. Data backup and recovery services
- d. Interfaces to practice management system, laboratory, etc.
- e. Data conversion/migration from existing systems
- f. Licensing of commercial databases (e.g., First Data Bank, Multum, CPT)

*EMR System Costs for a Tier 3 Medical Home*

Element	CMS Code	Time <sup>1</sup>	Life	Price
Software; license	(new)	60 minutes RN/LPN + 4 minutes physician	3 years <sup>2</sup>	\$7,995 (per provider) <sup>3</sup>
Software; updates, upgrades, and support	(new)	60 minutes RN/LPN + 4 minutes physician	3 years <sup>2</sup>	\$3,198 <sup>3</sup>
Computer, server	ED022	60 minutes RN/LPN + 4 minutes physician	5 years <sup>4</sup>	- <sup>4</sup>
Computer, desktop, with monitor	ED021	60 minutes RN/LPN + 4 minutes physician	5 years <sup>4</sup>	- <sup>4</sup>
System support (hardware, network, Internet connection)	(new)	60 minutes RN/LPN + 4 minutes physician	5 years <sup>5</sup>	\$1,253 <sup>6</sup>
Interfaces	(new)	60 minutes RN/LPN + 4 minutes physician	3 years <sup>7</sup>	\$550 <sup>3</sup>

### Notes

1. Time is assumed equal to seventy-five percent of clinical staff time plus slightly less than half of the estimated physician time, since the EHR is an integral part of care management in the Tier 3 medical home and will be in use whenever the RN/LPN or physician is providing care management for the patient.
2. Based on IRS amortization rules for computer software (see instructions Line 16 on IRS Form 4562 online at <http://www.irs.gov/pub/irs-pdf/i4562.pdf> )
3. Based on proposal for e-MDs provided by the Oklahoma QIO, attached. E-MDs is one of three systems expected to be capable of meeting the needs of a Tier 3 medical home; the other two are eClinicalWorks and NextGen. An invoice for eClinicalWorks is pending.
4. See CMS equipment list
5. Corresponding to lifetime of hardware
6. Assumed to be 5% of hardware costs
7. Corresponding to lifetime of software

**The RUC recommend to CMS the above line items for implementation and use of electronic medical records system within the PE inputs for the Tier 3 medical home. Invoices are attached.**

The Workgroup agreed that the Tier 2 Medical Home includes a desktop computer and patient registry software. The medical home practice capabilities required by CMS cannot be implemented by a physician office without the use of a separate dedicated desktop top computer with monitor. Further, the management of a panel of medical home patients at the Tier 2 level of sophistication requires, at the least, the use of a software system to track patient status.

**The RUC recommend to CMS that the Tier 2 Medical Home include one ED021 Desk top computer with monitor and patient registry software. For the registry software, the RUC agrees that this software should allow the directing of multiple disease states and allow for the creation of reports to better track patients. DocSite is an example of such a registry. The pricing information for DocSite is available at: <http://www.docsite.com/help/pricing>.**

**The Tier 1 medical home contains no medical equipment.**

### PLI Crosswalk

The Workgroup discussed the professional liability insurance (PLI) crosswalk methodology used by CMS noting that CMS relies on a service within the family or somewhat comparable with a similar work RVU. **The RUC recommends that a suitable service with a similar work RVU is either 92025, *Computerized corneal topography, unilateral or bilateral, with interpretation and report*, which has a work RVU of 0.35 and a PLI RVU of 0.02 or 99441, *Telephone evaluation and management service provided by a physician; 5-10 minutes*, which has a work RVU of 0.25 and a PLI RVU of 0.02.**

Hubert H. Humphrey Building  
200 Independence Ave., S.W.  
Washington, DC 20201

Dear Mr. Weems,

On behalf of the American Medical Association/Specialty Society RVS Update Committee (RUC), I am pleased to submit work relative value recommendations and direct practice expense inputs specifically for the Medicare Medical Home Demonstration project to the Centers for Medicare and Medicaid Services (CMS).

The RUC's recommendations are enclosed, along with several supporting documents regarding patient eligibility and physician panel size which served as the basis for the physician work and clinical staff time determinations. The attachments also include two price quotes regarding an electronic medical records system for use in the development of medical equipment inputs for the Tier 3 medical home. In addition to the recommended work relative values and direct practice expense inputs, the RUC is submitting its recommended language for the HCPCS G Code descriptors to be used for reporting the three tiers of medical homes. It is the opinion of the RUC that these recommendations are reasonable in light of the information provided by the Agency and its contractor, Mathematica Policy Research.

At the outset of this request, the RUC engaged in an effort to acquire data from CMS regarding the specific eligibility criteria for Medicare beneficiaries who would be eligible to participate in this demonstration project. Initially, the RUC was given a range of 65-86% of all Medicare beneficiaries. Data regarding the average number of Medicare beneficiaries in a typical primary care physician's practice was not readily available. While this made the process of developing recommendations somewhat more challenging, the RUC was able to use several sources to extrapolate an estimate of 250 enrolled patients per primary care physician within this demonstration. The RUC's recommendations are based on these assumptions. These recommendations may be different in the event that CMS changes the eligibility criteria for the demonstration project or the requirements of a medical home.

In addition to changes in eligibility, medical home care coordination, and/or practice capabilities, changes in the actual participation by Medicare beneficiaries or significant differences in practice costs may have an impact on the recommended valuation of these

Kerry N. Weems  
April 29, 2008  
Page Two

services. To address these concerns, the RUC recommends that CMS actively monitor the practice inputs of the medical home demonstration on an ongoing basis to verify the recommendations of the RUC. The RUC also recommends that CMS monitor the number of participating Medicare beneficiaries per physician.

Any significant deviation from the RUC's estimated panel size of 250 enrolled beneficiaries per physician may impact the valuation of the medical home services. With this in mind, the RUC also encourages the Agency to track data that may be used by the RUC or CMS in potential future valuation of medical home services, including but not limited to actual staff type, clinical staff time, physician staff time, medical equipment, and medical supplies. The RUC encourages CMS to utilize the RUC Medical Home Workgroup to provide assistance in the development of an evaluation design.

The RUC strongly encourages the Agency to collect clinical as well as fiscal endpoints to measure the success of this demonstration project. As discussed at the onset of this project, CMS has made it clear that success will be at least partly determined by the cost savings generated. With a large panel size as CMS has proposed, the distribution of patients is likely to be bi-modal based on severity of patient illness. For those that are "sicker," cost savings may well be the primary indicator for success. However, in the larger, "less sick" distribution of patients, the cost savings may not be immediately apparent in a three-year demonstration project. These two populations have markedly different needs; while they each will benefit within a medical home, the outcomes and specific benefits may be vastly different. The RUC requests that CMS consider expanding metrics for success to include increases in preventative services such as number of mammograms, colorectal cancer screening, hemoglobin A1C, and others. Similar to any research project or a clinical trial, it is imperative that CMS define success criteria and clarify primary and secondary endpoints before the demonstration begins.

The RUC appreciates the opportunity to participate in the development of these recommendations and looks forward to a successful demonstration project.

Sincerely,

William L. Rich, III, MD, FACS

## **G Code for Medical Home Demonstration (Tier 1)**

This code is to be used for Medicare Fee For Service patients enrolled in Medicare's Medical Home Demonstration Project. Appropriate E/M codes may be also submitted as they occur.

GXXXX1:

Short Description: Coordination of care across all of a patient's healthcare needs, provided in a Tier 1 medical home, per month,

Long Description: Direct physician supervision and management of the comprehensive and coordinated health care of a patient having one or more chronic conditions or prolonged illnesses as included on the CMS eligible disease list. These services are separate from and in addition to those provided as part of E/M services that may occur during the service period. Coordination of care across all of a patient's healthcare needs and responsibilities will occur whether or not an E/M service is provided and reported during the service period. Services include all of the following as necessary within a calendar month:

- Obtains mutual agreement on role of medical home between physician and patient
- Ongoing support, oversight, and guidance by a physician-led health care team
- Integrated coherent planning for ongoing medical care including communication and coordination with other physicians and healthcare professionals furnishing care
- Regular physician development and/or revision of documented care plans, including integration of new information and/or adjustment of medical therapy
- Approval and tracking of medication changes initiated by pharmacy benefit plans
- Medication reconciliation
- Reviews all medications including prescriptions, over the counter medications, and herbal therapies/supplements.
- Use of integrated care plan to plan and guide patient care.
- Review of reports of patient status from other physicians or health care professionals
- Review results of laboratory and other studies
- Seven day per week, 24-hour access to phone triage
- Communication with the patient, family, and caregivers for purposes of assessment or care decisions
- Use of health assessment to characterize patient needs and risks
- Identify age, gender and medical condition appropriate preventive medicine services.
- Organizes and trains staff in roles for coordination of care across all of a patient's healthcare needs. (including staff feedback).

The following services should not be reported in the same month as this reported service for the medical home demonstration.

Anticoagulant Management (CPT Codes 99363 and 99364)

Medical Team Conference (CPT Codes 99366-99368)

Care Plan Oversight (99339-99340, 99374-99380)

Counseling Services (99401-99420)

Telephone Services (99441-99443; 98966-98968)

On-Line Medical Evaluation (99444; 98969)

Education and Training for Patient Self-Management (98960-98962; 99078)

Review of Data/Preparation of Special Reports (99080, 99090, 99091)

Medication Therapy Management Services (99605-99607)

## **G Code for Medical Home Demonstration (Tier 2)**

This code is to be used for Medicare Fee For Service patients enrolled in Medicare's Medical Home Demonstration Project. Appropriate E/M codes may be also submitted as they occur.

GXXXX2:

Short Description: Coordination of care across all of a patient's healthcare needs, provided in a Tier 2 medical home, per month,

Long Description: Direct physician supervision and management of the comprehensive and coordinated health care of a patient having one or more chronic conditions or prolonged illnesses as included on the CMS eligible disease list. These services are separate from and in addition to those provided as part of E/M services that may occur during the service period. Coordination of care across all of a patient's healthcare needs and responsibilities will occur whether or not an E/M service is provided and reported during the service period. ### **G Code for Medical Home Demonstration (Tier 3)**

This code is to be used for Medicare Fee For Service patients enrolled in Medicare's Medical Home Demonstration Project. Appropriate E/M codes may be also submitted as they occur.

GXXXX3:

Short Description: Coordination of care across all of a patient's healthcare needs, provided in a Tier 3 medical home, per month,

Long Description: Direct physician supervision and management of the comprehensive and coordinated health care of a patient having one or more chronic conditions or prolonged illnesses as included on the CMS eligible disease list. These services are separate from and in addition to those provided as part of E/M services that may occur during the service. Coordination of care across all of a patient's healthcare needs and responsibilities will occur whether or not an E/M service is provided and reported during the service period. Services include all of the following as necessary within a calendar month:

- Obtains mutual agreement on role of medical home between physician and patient
- Ongoing support, oversight, and guidance by a physician-led health care team
- Integrated coherent planning for ongoing medical care including communication and coordination with other physicians and healthcare professionals furnishing care
- Regular physician development and/or revision of documented care plans, including integration of new information and/or adjustment of medical therapy
- Coordinates care and follow-up for patients who receive care in inpatient and outpatient facilities.
- Approval and tracking of medication changes initiated by health plans or pharmacy benefit plans
- Medication reconciliation to avoid interactions or duplications. Reviews all medications including prescriptions, over the counter medications, and herbal therapies/supplements
- Review of reports of patient status from other physicians or health care professionals
- Review results of laboratory and other studies
- Staff monitoring to ensure use of evidence-based medicine and clinical decision support tools to facilitate diagnostic test tracking, pre-visit planning, and after-visit/test follow-up
- Seven day per week, 24-hour access to phone triage
- Communication (including telephone calls, secure web sites, etc.) with the patient, family, and caregivers for purposes of assessment or care decisions

- Use of patient self-management plan (including end-of-life planning, home monitoring)
- Patient, family, and caregiver education and support
- Use of health assessment to characterize patient needs and risks
- Use of health information technologies, such as patient registries, to monitor and track patient health status or generate point of care clinical reminders
- Use of secure systems that provide for patient access to personal health information
- Use of secure electronic communication between the patient and the healthcare team
- Use of an electronic health record
- Use of an electronic prescribing system
- Measuring performance regarding clinical quality and patient experience and taking action to improve care and processes
- Monitoring, arranging, and evaluating appropriate evidence based and/or evidence informed preventive service
- Organizes and trains staff in roles for coordination of care across all of a patient's healthcare needs (including staff feedback)

The following services should not be reported in the same month as this reported service for the medical home demonstration.

**Subject:** FW: # of benes

just fyi --

for a different project, we checked the average number of Medicare benes treated by CTS PCPs in the year 2005 with new claims data. Updated numbers are higher than in 2000. The avg is 300 (compared to 257 prior). I am cc'ing Sherry Smith at the RUC in case this update is useful in fee setting for the medical home demo.

thanks,  
Mai

**MEMORANDUM**

**TO:** Jim Coan, Project Officer

**FROM:** Hoangmai Pham, Deborah Peikes, Myles Maxfield

**SUBJECT:** Prevalence estimates for medical home design

**DATE:** 2/21/2008  
6245

---

This memo responds to your request for estimates of the number of patients in a physician's panel likely to be eligible for the Medical Home Demonstration, and the number of eligible physicians. In summary, we estimate that a typical non-pediatrician primary care physician will have between 100-150 FFS Medicare patients who are eligible for the demonstration, and that approximately 102,000 primary care physicians see FFS Medicare patients in a given year. We cannot directly estimate the number of eligible physician practices, but suggest several other potential sources for these data.

**A. Number of Eligible Beneficiaries Per Physician**

We do not yet know which conditions CMS will include for patient eligibility criteria for the demonstration. Spike Duzer at CMS estimates that 44 percent of FFS Medicare beneficiaries have one or more of 9 conditions among those listed in the Chronic Condition Warehouse (colorectal cancer, breast cancer, chronic kidney disease, COPD, diabetes, heart failure, hip fracture, ischemic heart disease, and stroke). These beneficiaries accounted for 85% of total Medicare expenditures in 2005. We believe they were identified as eligible in 2003 and 2004, but have not confirmed that with Spike.

We examined data from the 2000-2001 Community Tracking Study Physician Survey for a representative sample of non-Federal, non-pediatrician primary care physicians who completed training and were active in patient care at least 20 hours per week, and found that they billed for encounters with an average of 257 unique FFS beneficiaries in one year. However, we expect that their total FFS Medicare panel will be larger (not all patients get seen in the same year), by as much as 30%. We thus made the following calculations based on both the (a) 257 and (b) 335 patients/PCP figures.

Applying Spike Duzer's estimate of 44% above, we estimate that the typical primary care physician will have approximately 100-150 (113-147) FFS Medicare patients eligible for the demonstration. Of course, these figures should be interpreted as lower bounds, and will shift upward with the number of chronic conditions that CMS includes in its patient eligibility criteria.

**MEMO TO:** Jim Coan, Project Officer  
**FROM:** Debbie Peikes and Mai Pham  
**DATE:** 2/21/2008  
**PAGE:** 2

The attached table provides another indication of the prevalence rates for specific chronic conditions is the attached table, but this table does not take into account that beneficiaries often have more than one condition. We hope to have more information on prevalence of specific conditions within the next two weeks.

## **B. Number of Eligible Physicians**

Based on the 2004-2005 Community Tracking Study Physician Survey, we estimate that there are 113,013 primary care physicians in the U.S., of whom approximately 90% see at least one FFS Medicare patient in a given year, implying that roughly 101,700 primary care physicians may be eligible for the demonstration.

Estimates of the number of physicians in particular primary care specialties follow. We suggest that the RUC ask specialty societies for estimates of the number of physicians in non-primary care specialties who participate in Medicare.

<b>Specialty</b>	<b>Total number of physicians</b>	<b>Number of physicians with Medicare patients</b>
General internal medicine	45,427	40,884
General practice	4,646	4,181
Family practice	60,277	54,249
Geriatrics	2,390	2,151
Internal medicine/pediatrics combined specialty	1,718	1,546

We are not aware of a readily accessible source of data on the number of physician practices participating in Medicare. The Medical Group Management Association may be able to suggest some. It may also be possible to derive these estimates from the National Plan and Provider Enumeration System, based on the number of organizational National Provider Identification (NPIs) numbers that are associated with physician NPIs.

#### Footnotes

\* Includes random 5% sample of Medicare beneficiaries who were eligible for or enrolled in Medicare on or after January 1, YYYY.

† Beneficiaries may be counted in more than one chronic condition category.

▲ Chronic conditions have a 1 to 3 year look-back time period (reference period). Since the data included in the CCW begins in 1999, beneficiaries cannot meet any chronic condition algorithm that has a 2 or 3 year look-back until 2000 or 2001 (respectively). Please refer to the CCW Condition Categories for more information.

NOTE: These counts consider fee-for-service administrative claims criteria only. The beneficiaries included in these counts may have any combination of Medicare coverage, including full or partial fee-for-service and/or HMO coverage. The application of coverage restrictions/criteria *will* impact the size of these samples.

Hi Sherry,

Happy to chat about this and our data. A few points to clarify (I'm cc'ing Jim Coan, Bill Rich, and Myles Maxfield, to close the loop):

1. Please interpret the 257 number as the median number of unique Medicare beneficiaries seen by a typical **individual PCP** (FP/GIM/GP) in **ONE** year. As a physician won't see all of his/her patients in any given 12 months, their total Medicare panel may be larger, by as much as 30% (bringing it to 335). It is possible for us to run numbers for their total Medicare panel over 3 years (for more recent years 2004-06), but not sure if we would need programming support.
2. The typical practice will have several fold this number of beneficiaries, but you can pick the multiplier based on assumptions about the number of docs per practice.
3. The 100-150 number was our early estimate of how many of the 257-335 patients would be eligible for the demo based on prevalence counts for **only 8 chronic conditions**. We therefore strongly suspect that the number of eligibles per PCP will actually be much closer (or higher) than the 200 range, as more conditions are added to the eligibility list.
4. The numbers are from the Community Tracking Study Physician Survey, linked to Medicare claims data for years 2000-2002 for the beneficiaries those physicians treated. We just got the 2004-2006 claims data in hand, and have linked that to our 2005 survey respondents.

Please let me know if helpful to discuss further.

thanks,  
Mai

Subject: benchmark data for panel size

Hi, David. This is an excerpt of the message sent to the original member who inquired about panel size. Please review it and, if you have any questions, feel free to contact the Information Center at [infocenter@mgma.com](mailto:infocenter@mgma.com).

Thanks,

Devon

MGMA's Survey Reports do not benchmark "panel size" benchmarks, primarily because there are many variables that can affect these figures.

Having said that, you may want have in mind one related metric from the "Cost Survey Report" -- that of "Patients per Physician," from the data table titled: "Staffing, RVUs, Patients, Procedures and Square Footage." That table reports data for unique patients seen in the previous year.

For example, of those respondents to the "Cost Survey for Single-specialty Practices: 2007 Report Based on 2006 Data," for Family Practice, the average number of patients per FTE physician is 2.362; the median is 2,115. The table containing this patient data appears in the survey for each specialty reported.

In addition, the articles listed below provide guidance on how to determine Panel Size. Specifically, from the article reference below, titled: "Panel Size" by Dr. Mark Murray, et.al, (Family Practice Management, Nov 2007), this formula is provided:

"Panel size  $\times$  visits per patient per year (demand) = visits per provider per day  $\times$  number of days worked per year (supply).

For example, if a physician provides 20 visits per day, 220 days per year, and his or her patient population averages two visits per patient per year, the ideal panel size would be 2,200."

The article (shown below) provides background context and explanation for the formula.

>>> <L.Logel@FMHospital.com> 1/15/2008 12:39 PM >>>

Hi

Recently we developed and implemented a full hospitalist program so our providers no longer complete hospital rounds. Based on the fact that they are now in the office more hours and not in the hospital I'm wondering what MGMA data is for best practice panel size for primary care.

Thank you in advance for your help.

Leslie Logel, CMPE  
Director of Operations  
Department of Primary Care  
Frisbie Memorial Hospital

## **RUC Medical Home Workgroup / Geisinger Health System Conference Call**

Members of the RUC Medical Home Workgroup met with representatives of the Geisinger Health System on Thursday, April 3, 2008 via conference call to better understand the Geisinger role in the ongoing Medicare Physician Group Practice Demonstration Project and to ascertain any information that would be useful to the Workgroup's ongoing discussion.

Doctors David Hitzeman, Leonard Lichtenfeld, Thomas Felger, and William Rich participated. The Geisinger participants included Doctors Steve Pierdon, Beverly Blaisure, Duane Davis and Janet Tomcavage. Doctor James Blankenship facilitated the meeting and listened in as an observer.

Doctors Rich and Hitzeman summarized the RUC's role in the Medicare Medical Home Demonstration project. The representatives from Geisinger explained their role in current Medicare demonstration projects, however most of the discussion focused on a specific medical home project currently running in two Geisinger practices.

### Electronic Health Records and IT Infrastructure

Geisinger fully implemented electronic health records (HER) in 2001. This highly sophisticated system uses EpicCare as a foundation, enhanced with homegrown software and programming. It was acknowledged that the Geisinger model could not be used to predict EHR costs for the typical medical home as their IT costs include all lines of business, including their insurance component. The entire HER system cost \$80 million, or \$114,000 per individual physician. Geisinger has nearly 700 physicians in their system, of which 200 are primary care focused. Geisinger's ongoing IT budget is 4% of the system's annual revenue. The Geisinger representatives encouraged the Workgroup members to consider other sources to determine the appropriate EHR cost estimate.

### Medicare Patient Panel Size

Statistics included on Geisinger's website, [www.geisinger.org/about/stats.html](http://www.geisinger.org/about/stats.html), indicate that the system serves more than 2 million patients throughout Pennsylvania, with 210,000 enrolled in the Geisinger health plan. Other relevant statistics:

### ***Clinical Staff Breakdown in 2007***

- Physicians/scientists: 679
- Residents/fellows: 257
- Registered nurses: 1,949
- Licensed practical nurses: 316

It is estimated that the 200 Geisinger primary care physicians serve a total of 350,000 patients, which translates to 1,750 patients per physician. Medicare patients represent

25% of this estimated panel size or 440 patients. This varies from the overall Geisinger physician panel sizes. The Geisinger representatives quoted that their overall average load of patient to physicians is 2,500, of which 700-800 are Medicare.

The RUC participants inquired about whether the system has risk-adjusted data, dependent upon the number of chronic condition or other risk criteria. Geisinger does risk adjust by the number of chronic conditions and also use a 1-5 risk rating, with the highest risk at rated at 5. Approximately 15-20% require intensive case management, as at least 15% of patients are rated at a 5.

#### Patient Caseload per Nurse Case Manager

In addition to the sophisticated EMR system, Geisinger has utilized a number of medical home concepts across their entire patient population for some time. Patient registries; use of best practices/evidence-based medicine for chronic care and preventive medicine; and patient reminders are already a component of the system.

In January 2007, an intensive medical home project was initiated in two practice sites. The description of this project resembles the Tier 3 medical home. Approximately 3,000 Medicare patients are served by these two practice sites. The program has recently been expanded to 20,000 patients in eleven practice sites.

In these two initial sites, the Geisinger representatives indicated that there were 250 Medicare “medical home” patients per physician. This is lower than the overall Geisinger Medicare patient to primary care physician estimate of 440 described above.

In these two initial practices, four Registered Nurse (RN) case managers were hired to exclusively coordinate the care for the patients. It is estimated that each case manager was able to coordinate the care of 125 high risk patients. LPNs are also involved in this medical home model, as individuals integrating the care coordination input into the practice.

#### Physician Involvement

The physicians in these two practices attend at least one hour to ninety minute team meeting per month to discuss the sickest patients. In addition, the physicians spend, on average, three hours per week in non face-to-face patient care coordination activities.

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
**CMS Request: PE Review**

September 2011

**Kyphoplasty**

In the July 19, 2011 *Proposed Rule* for the 2012 Medicare Physician Payment Schedule, CMS indicated that the agency received comments to establish non-facility practice expense inputs for CPT codes 22523, 22524 and 22525 kyphoplasty services. As such, CMS requested that the RUC make recommendations for the practice expense inputs for these services.

The Practice Expense Subcommittee updated the equipment for the Moderate Sedation package, specifically related to EQ212 *pulse oxymetry recording software (prolonged monitoring)* and EQ269 *blood pressure monitor, ambulatory, w-battery charger*. These two equipment items will be removed from the Moderate Sedation package as CMS indicated that EQ011 *ECG, 3-channel (with SpO2, NIBP, temp, resp)* already incorporates the functionality of these two equipment items. **The Practice Expense Subcommittee reviewed the direct practice expense inputs recommended by the specialty and removed EQ211 pulse oximeter w-printer and replaced EQ010 ECG, 3-channel with EQ011 to align with the revised moderate sedation equipment guidelines. The RUC recommends the modified direct practice expense inputs attached.**

## AMA/Specialty Society RVS Update Committee Summary of Recommendations

September 2011

### Molecular Pathology-Tier 1

The CPT Editorial Panel has developed a new coding structure to describe molecular pathology services, based on the efforts and recommendations of the Molecular Pathology Coding Workgroup convened beginning in October 2009. In October 2010 and February 2011, the Panel accepted 92 Tier 1 codes, which are a list of gene-specific and genomic analysis CPT codes for high-volume molecular pathology services. These services were previously reported with a series of “stacking codes.” The RUC understands that payment for these services is currently based on a mixture of payment methodologies, including the physician fee schedule and the clinical lab fee schedule. CMS requested that the RUC review data provided by the College of American Pathologists to provide the agency with more information, as a policy is developed to determine which payment schedule is appropriate for these services. In April 2011, the RUC recommended physician work and time values for 18 Tier I codes. In September 2011, the specialty presented data on the remaining 52 services. At this time, the specialty indicated that interpretation is not typically performed by a physician for the remaining Tier I codes.

#### **81225 CYP2C19 (cytochrome P450, family 2, subfamily C, polypeptide 19) (eg, drug metabolism), gene analysis, common variants (eg, \*2, \*3, \*4, \*8, \*17)**

The RUC reviewed the survey data as presented by the specialty society which indicated that the median time for 81225 was 13 minutes. The RUC agreed that this time accurately reflects the amount of time required to perform the service. The RUC agreed with the specialty that although the time associated with the key reference code 86320 *Immunoelectrophoresis; serum* (total time = 17 minutes, work RVU = 0.37) is slightly more than the surveyed code, 81225 is a more complex and intense service perform. The RUC also compared this service to 93784 *Ambulatory blood pressure monitoring, utilizing a system such as magnetic tape and/or computer disk, for 24 hours or longer; including recording, scanning analysis, interpretation and report* (intra-time=15 minutes, work RVU=0.38), which requires similar physician work and time to perform. The specialty society also explained that this service keeps rank order with Tier 2 code 81401 *Molecular pathology procedure, Level 2 (eg, 2-10 SNPs, 1 methylated variant, or 1 somatic variant [typically using nonsequencing target variant analysis], or detection of a dynamic mutation disorder/triplet repeat)*, which the RUC recommended at this meeting 0.40 work RVUs for 15 minutes of intra-service time. **Based on these comparisons, the RUC recommends a work RVU of 0.37, the survey’s 25<sup>th</sup> percentile, for CPT code 81225.**

#### **81245 FLT3 (fms-related tyrosine kinase 3) (eg, acute myeloid leukemia), gene analysis, internal tandem duplication (ITD) variants (ie, exons 14, 15)**

The RUC reviewed the survey data as presented by the specialty society which indicated that the median time for 81245 was 15 minutes. The RUC agreed that this time accurately reflects the amount of time required to perform the service. The RUC agreed with the specialty that the key reference code 88291 *Cytogenetics and molecular cytogenetics, interpretation and report* (total time = 20 minutes, work RVU = 0.52) requires

more time than the surveyed code.. The RUC also compared this service to 93784 *Ambulatory blood pressure monitoring, utilizing a system such as magnetic tape and/or computer disk, for 24 hours or longer; including recording, scanning analysis, interpretation and report* (intra-time=15 minutes, work RVU=0.38), which requires similar physician work and time to perform. The specialty society also explained that this service keeps rank order with Tier 2 code 81401 *Molecular pathology procedure, Level 2 (eg, 2-10 SNPs, 1 methylated variant, or 1 somatic variant [typically using nonsequencing target variant analysis], or detection of a dynamic mutation disorder/triplet repeat)*, which the RUC recommended at this meeting 0.40 work RVUs for 15 minutes of intra-service time. **Based on these comparisons, the RUC recommends a work RVU of 0.37, the survey's 25<sup>th</sup> percentile, for CPT code 81245.**

**81350 UGT1A1 (UDP glucuronosyltransferase 1 family, polypeptide A1) (eg, irinotecan metabolism), gene analysis, common variants (eg, \*28, \*36, \*37)**

The RUC reviewed the survey data as presented by the specialty society which indicated that the median time for 81350 was 15 minutes. The RUC agreed that this time accurately reflects the amount of time required to perform the service. The RUC agreed with the specialty that the key reference code 88291 *Cytogenetics and molecular cytogenetics, interpretation and report* (total time = 20 minutes, work RVU = 0.52) requires more time than the surveyed code. The RUC also compared this service to 93784 *Ambulatory blood pressure monitoring, utilizing a system such as magnetic tape and/or computer disk, for 24 hours or longer; including recording, scanning analysis, interpretation and report* (intra-time=15 minutes, work RVU=0.38), which requires similar physicianwork and time to perform. The specialty society also explained that this service keeps rank order with Tier 2 code 81401 *Molecular pathology procedure, Level 2 (eg, 2-10 SNPs, 1 methylated variant, or 1 somatic variant [typically using nonsequencing target variant analysis], or detection of a dynamic mutation disorder/triplet repeat)*, which the RUC recommended at this meeting 0.40 work RVUs for 15 minutes of intra-service time. **Based on these comparisons, the RUC recommends a work RVU of 0.37, the survey's 25<sup>th</sup> percentile, for CPT code 81350.**

**81227 CYP2C9 (cytochrome P450, family 2, subfamily C, polypeptide 9) (eg, drug metabolism), gene analysis, common variants (eg, \*2, \*3, \*5, \*6)**

The RUC reviewed the survey data as presented by the specialty society which indicated that the median time for 81227 was 14 minutes. The RUC agreed that this time accurately reflects the amount of time required to perform the service. The RUC agreed with the specialty that although the time associated with the key reference code 86320 *Immunoelectrophoresis; serum* (total time = 17 minutes, work RVU = 0.37) is slightly more than the surveyed code, 81227 is a more complex and intense service to perform. The RUC also compared this service to 93784 *Ambulatory blood pressure monitoring, utilizing a system such as magnetic tape and/or computer disk, for 24 hours or longer; including recording, scanning analysis, interpretation and report* (intra-time=15 minutes, work RVU=0.38), which requires similar physician work and time to perform. The specialty society also explained that this service keeps rank order with Tier 2 code 81401 *Molecular pathology procedure, Level 2 (eg, 2-10 SNPs, 1 methylated variant, or 1 somatic variant [typically using nonsequencing target variant analysis], or detection of a dynamic mutation disorder/triplet repeat)*, which the RUC recommended at this meeting 0.40 work RVUs for 15 minutes of intra-service time. **Based on these comparisons, the RUC recommends a work RVU of 0.38, the survey's 25<sup>th</sup> percentile, for CPT code 81227.**

**81355 VKORC1 (vitamin K epoxide reductase complex, subunit 1) (eg, warfarin metabolism), gene analysis, common variants (eg, -1639/3673)**

The RUC reviewed the survey data as presented by the specialty society which indicated that the median time for 81355 was 15 minutes. The RUC agreed that this time accurately reflects the amount of time required to perform the service. The RUC agreed with the specialty that although the time associated with the key reference code 86320 *Immunoelectrophoresis; serum* (total time = 17 minutes, work RVU = 0.37) is slightly more than the surveyed code, 81355 is a more complex and intense service to perform. The RUC also compared this service to 93784 *Ambulatory blood pressure monitoring, utilizing a system such as magnetic tape and/or computer disk, for 24 hours or longer; including recording, scanning analysis, interpretation and report* (intra-time=15 minutes, work RVU=0.38), which requires similar physician work and time to perform. The specialty society also explained that this service keeps rank order with Tier 2 code 81401 *Molecular pathology procedure, Level 2 (eg, 2-10 SNPs, 1 methylated variant, or 1 somatic variant [typically using nonsequencing target variant analysis], or detection of a dynamic mutation disorder/triplet repeat)*, which the RUC recommended at this meeting 0.40 work RVUs for 15 minutes of intra-service time. **Based on these comparisons, the RUC recommends a work RVU of 0.38, the survey's 25<sup>th</sup> percentile, for CPT code 81355.**

**81310 NPM1 (nucleophosmin) (eg, acute myeloid leukemia) gene analysis, exon 12 variants**

The RUC reviewed the survey data as presented by the specialty society which indicated that the 75<sup>th</sup> percentile for time for 81310 was 19 minutes. The RUC agreed that this time accurately reflects the amount of time required to perform the service. The RUC agreed with the specialty that the key reference code 88291 *Cytogenetics and molecular cytogenetics, interpretation and report* (total time = 20 minutes, work RVU = 0.52) requires more time than the surveyed code.. The RUC also compared this service to 93784 *Ambulatory blood pressure monitoring, utilizing a system such as magnetic tape and/or computer disk, for 24 hours or longer; including recording, scanning analysis, interpretation and report* (intra-time=15 minutes, work RVU=0.38), which requires similar work and time to perform. The specialty society also explained that this service keeps rank order with Tier 2 code 81401 *Molecular pathology procedure, Level 2 (eg, 2-10 SNPs, 1 methylated variant, or 1 somatic variant [typically using nonsequencing target variant analysis], or detection of a dynamic mutation disorder/triplet repeat)*, which the RUC recommended at this meeting 0.40 work RVUs for 15 minutes of intra-service time. **Based on these comparisons, the RUC recommends a work RVU of 0.39, the survey's 25<sup>th</sup> percentile, for CPT code 81310.**

**81331 SNRPN/UBE3A (small nuclear ribonucleoprotein polypeptide N and ubiquitin protein ligase E3A) (eg, Prader-Willi syndrome and/or Angelman syndrome), methylation analysis**

The RUC reviewed the survey data as presented by the specialty society which indicated that the median time for 81331 was 15 minutes. The RUC agreed that this time accurately reflects the amount of time required to perform the service. The RUC agreed with the specialty that the key reference code 88291 *Cytogenetics and molecular cytogenetics, interpretation and report* (total time = 20 minutes, work RVU = 0.52) requires more time than the surveyed code. The RUC also compared this service to 93784 *Ambulatory blood pressure monitoring, utilizing a system such as magnetic tape and/or computer disk, for 24 hours or longer; including recording, scanning analysis, interpretation and report* (intra-time=15 minutes, work RVU=0.38), which requires similar physician work and time to perform. The specialty society also explained that this service keeps rank order with Tier 2 code 81401 *Molecular pathology procedure, Level 2 (eg, 2-10 SNPs, 1 methylated variant, or 1 somatic variant [typically using nonsequencing target variant analysis], or detection of a dynamic mutation disorder/triplet repeat)*, which the RUC recommended

at this meeting 0.40 work RVUs for 15 minutes of intra-service time. **Based on these comparisons, the RUC recommends a work RVU of 0.39, the survey's 25<sup>th</sup> percentile, for CPT code 81331.**

**81265 Comparative analysis using Short Tandem Repeat (STR) markers; patient and comparative specimen (eg, pre-transplant recipient and donor germline testing, post-transplant non-hematopoietic recipient germline [eg, buccal swab or other germline tissue sample] and donor testing, twin zygosity testing, or maternal cell contamination of fetal cells)**

The RUC reviewed the survey data as presented by the specialty society which indicated that the median time for 81265 was 17 minutes. The RUC agreed that this time accurately reflects the amount of time required to perform the service. The RUC agreed with the specialty that the time associated with the key reference code 86320 *Immunoelectrophoresis; serum* (total time = 17 minutes, work RVU = 0.37) is exactly the same as the surveyed code, however, 81265 overall is a more complex and intense service to perform. Further, the RUC also compared this service to 93784 *Ambulatory blood pressure monitoring, utilizing a system such as magnetic tape and/or computer disk, for 24 hours or longer; including recording, scanning analysis, interpretation and report* (intra-time=15 minutes, work RVU=0.38), which requires similar physician work and time to perform. The specialty society also explained that this service keeps rank order with Tier 2 code 81401 *Molecular pathology procedure, Level 2* (eg, 2-10 SNPs, 1 methylated variant, or 1 somatic variant [typically using nonsequencing target variant analysis], or detection of a dynamic mutation disorder/triplet repeat), which the RUC recommended at this meeting 0.40 work RVUs for 15 minutes of intra-service time. **Based on these comparisons, the RUC recommends a work RVU of 0.40, the survey's 25<sup>th</sup> percentile, for CPT code 81265.**

**81266 Comparative analysis using Short Tandem Repeat (STR) markers; each additional specimen (eg, additional cord blood donor, additional fetal samples from different cultures, or additional zygosity in multiple birth pregnancies)**

The RUC reviewed the survey data as presented by the specialty society which indicated that the median time for 81266 was 15 minutes. The RUC agreed that this time accurately reflects the amount of physician time required to perform the service. The RUC agreed with the specialty that although the time associated with the key reference code 86320 *Immunoelectrophoresis; serum* (total time = 17 minutes, work RVU = 0.37) is slightly more than the surveyed code, 81266 is overall a more intense procedure to perform. The RUC also compared this service to 93784 *Ambulatory blood pressure monitoring, utilizing a system such as magnetic tape and/or computer disk, for 24 hours or longer; including recording, scanning analysis, interpretation and report* (intra-time=15 minutes, work RVU=0.38), which requires similar work and time to perform. The specialty society also explained that this service keeps rank order with Tier 2 code 81401 *Molecular pathology procedure, Level 2* (eg, 2-10 SNPs, 1 methylated variant, or 1 somatic variant [typically using nonsequencing target variant analysis], or detection of a dynamic mutation disorder/triplet repeat), which the RUC recommended at this meeting 0.40 work RVUs for 15 minutes of intra-service time. **Based on these comparisons, the RUC recommends a work RVU of 0.41, the survey's 25<sup>th</sup> percentile, for CPT code 81266.**

**81267 Chimerism (engraftment) analysis, post transplantation specimen (eg, hematopoietic stem cell), includes comparison to previously performed baseline analyses; without cell selection**

The RUC reviewed the survey data as presented by the specialty society which indicated that the median time for 81267 was 18 minutes. The RUC agreed that this time accurately reflects the amount of time required to perform the service. The RUC agreed with the specialty that the key reference code 88291 *Cytogenetics and molecular cytogenetics, interpretation and report* (total time = 20 minutes, work RVU = 0.52) requires

more time than the surveyed code. The RUC also compared this service to 93784 *Ambulatory blood pressure monitoring, utilizing a system such as magnetic tape and/or computer disk, for 24 hours or longer; including recording, scanning analysis, interpretation and report* (intra-time=15 minutes, work RVU=0.38), which requires less physician work and time to perform. The specialty society also explained that this service keeps rank order with Tier 2 code 81401 *Molecular pathology procedure, Level 2 (eg, 2-10 SNPs, 1 methylated variant, or 1 somatic variant [typically using nonsequencing target variant analysis], or detection of a dynamic mutation disorder/triplet repeat)*, which the RUC recommended at this meeting 0.40 work RVUs for 15 minutes of intra-service time. **Based on these comparisons, the RUC recommends a work RVU of 0.45, the survey's 25<sup>th</sup> percentile, for CPT code 81267.**

**81268 Chimerism (engraftment) analysis, post-transplantation specimen (eg, hematopoietic stem cell), includes comparison to previously performed baseline analyses; with cell selection (eg, CD3, CD33), each cell type**

The RUC reviewed the survey data as presented by the specialty society which indicated that the median time for 81268 was 20 minutes. The RUC agreed that this time accurately reflects the amount of time required to perform the service. The RUC agreed with the specialty that the key reference code 88291 *Cytogenetics and molecular cytogenetics, interpretation and report* (total time = 20 minutes, work RVU = 0.52) requires similar time to perform compared to the surveyed code, 81268. The RUC also compared this service to 93784 *Ambulatory blood pressure monitoring, utilizing a system such as magnetic tape and/or computer disk, for 24 hours or longer; including recording, scanning analysis, interpretation and report* (intra-time=15 minutes, work RVU=0.38), which requires less work and time to perform. The specialty society also explained that this service keeps rank order with Tier 2 code 81401 *Molecular pathology procedure, Level 2 (eg, 2-10 SNPs, 1 methylated variant, or 1 somatic variant [typically using nonsequencing target variant analysis], or detection of a dynamic mutation disorder/triplet repeat)*, which the RUC recommended at this meeting 0.40 work RVUs for 15 minutes of intra-service time. **Based on these comparisons, the RUC recommends a work RVU of 0.51, the survey's 25<sup>th</sup> percentile, for CPT code 81268.**

**81226 CYP2D6 (cytochrome P450, family 2, subfamily D, polypeptide 6) (eg, drug metabolism), gene analysis, common variants (eg, \*2, \*3, \*4, \*5, \*6, \*9, \*10, \*17, \*19, \*29, \*35, \*41, \*1XN, \*2XN, \*4XN)**

The RUC reviewed the survey data as presented by the specialty society which indicated that the median time for 81226 was 15 minutes. The RUC agreed that this time accurately reflects the amount of time required to perform the service. The RUC agreed with the specialty that the key reference code 88291 *Cytogenetics and molecular cytogenetics, interpretation and report* (total time = 20 minutes, work RVU = 0.52) requires more time to perform compared to the surveyed code, 81226. The specialty society also explained, and the RUC agreed, that this service keeps rank order with Tier 2 code 81402 *Molecular pathology procedure, Level 3 (eg, >10 SNPs, 2-10 methylated variants, or 2-10 somatic variants [typically using non-sequencing target variant analysis], immunoglobulin and T-cell receptor gene rearrangements, duplication/deletion variants 1 exon*, which the RUC recommended at this meeting 0.50 work RVUs for 20 minutes of intra-service time. **Based on these comparisons, the RUC recommends a work RVU of 0.43, the survey's 25<sup>th</sup> percentile, for CPT code 81226.**

**81301 Microsatellite instability analysis (eg, hereditary non-polyposis colorectal cancer, Lynch syndrome) of markers for mismatch repair deficiency (eg, BAT25, BAT26), includes comparison of neoplastic and normal tissue, if performed**

The RUC reviewed the survey data as presented by the specialty society which indicated that the median time for 81301 was 20 minutes. The RUC agreed that this time accurately reflects the amount of time required to perform the service. The RUC agreed with the specialty that the key reference code 88291 *Cytogenetics and molecular cytogenetics, interpretation and report* (total time = 20 minutes, work RVU = 0.52) requires similar physician time and intensity to perform compared to the surveyed code, 81301. The RUC also compared this service to 93784 *Ambulatory blood pressure monitoring, utilizing a system such as magnetic tape and/or computer disk, for 24 hours or longer; including recording, scanning analysis, interpretation and report* (intra-time=15 minutes, work RVU=0.38), which requires less work and time to perform. The specialty society also explained that this service keeps rank order with Tier 2 code 81402 *Molecular pathology procedure, Level 3 (eg, >10 SNPs, 2-10 methylated variants, or 2-10 somatic variants [typically using non-sequencing target variant analysis], immunoglobulin and T-cell receptor gene rearrangements, duplication/deletion variants 1 exon*, which the RUC recommended at this meeting 0.50 work RVUs for 20 minutes of intra-service time **Based on these comparisons, the RUC recommends a work RVU of 0.50, the survey's 25<sup>th</sup> percentile, for CPT code 81301.**

**81261 IGH@ (Immunoglobulin heavy chain locus) (eg, leukemias and lymphomas, B-cell), gene rearrangement analysis to detect abnormal clonal population(s); amplification methodology (eg, polymerase chain reaction)**

The RUC reviewed the survey data as presented by the specialty society which indicated that the median time for 81261 was 21 minutes. The RUC agreed that this time accurately reflects the amount of time required to perform the service. The RUC agreed with the specialty that the key reference code 88291 *Cytogenetics and molecular cytogenetics, interpretation and report* (total time = 20 minutes, work RVU = 0.52) requires similar physician time and intensity to perform compared to the surveyed code, 81261. The RUC also compared this service to 93784 *Ambulatory blood pressure monitoring, utilizing a system such as magnetic tape and/or computer disk, for 24 hours or longer; including recording, scanning analysis, interpretation and report* (intra-time=15 minutes, work RVU=0.38), which requires less work and time to perform. The specialty society also explained that this service keeps rank order with Tier 2 code 81402 *Molecular pathology procedure, Level 3 (eg, >10 SNPs, 2-10 methylated variants, or 2-10 somatic variants [typically using non-sequencing target variant analysis], immunoglobulin and T-cell receptor gene rearrangements, duplication/deletion variants 1 exon*, which the RUC recommended at this meeting 0.50 work RVUs for 20 minutes of intra-service time **Based on these comparisons, the RUC recommends a work RVU of 0.52, the survey's 25<sup>th</sup> percentile, for CPT code 81261.**

**81342 TRG@ (T cell antigen receptor, gamma) (eg, leukemia and lymphoma), gene rearrangement analysis, evaluation to detect abnormal clonal population(s)**

The RUC reviewed the survey data as presented by the specialty society which indicated that the median time for 81342 was 25 minutes. The RUC agreed that this time accurately reflects the amount of time required to perform the service. The RUC agreed with the specialty that the key reference code 88291 *Cytogenetics and molecular cytogenetics, interpretation and report* (total time = 20 minutes, work RVU = 0.52) requires less physician time and intensity to perform compared to the surveyed code, 81342. The specialty society also explained that this service keeps rank order with Tier 2 code 81402 *Molecular pathology procedure, Level 3 (eg, >10 SNPs, 2-10 methylated variants, or 2-10 somatic variants [typically using non-sequencing target variant analysis], immunoglobulin and T-cell receptor gene rearrangements, duplication/deletion variants 1 exon*, which the RUC recommended at this meeting 0.50 work RVUs for 20 minutes of intra-service time **Based on these comparisons, the**

**RUC recommends a work RVU of 0.57, the survey's 25<sup>th</sup> percentile, for CPT code 81342.**

**81264 IGK@ (Immunoglobulin kappa light chain locus) (eg, leukemia and lymphoma, B-cell), gene rearrangement analysis, evaluation to detect abnormal clonal population(s)**

The RUC reviewed the survey data as presented by the specialty society which indicated that the median time for 81264 was 22 minutes. The RUC agreed that this time accurately reflects the amount of time required to perform the service. The RUC agreed with the specialty that although the key reference code 88182 *Flow cytometry, cell cycle or DNA analysis* (total time = 20 minutes, work RVU = 0.77) requires less time compared to the surveyed code, 81264, the reference code is overall a more intense service to perform. The RUC also compared this service to 88172 *Cytopathology, evaluation of fine needle aspirate; immediate cytohistologic study to determine adequacy for diagnosis, first evaluation episode, each site*, (Intra-time=20 minutes, Work RVU=0.60) which requires similar physician work and time to perform. The specialty society also explained that this service keeps rank order with Tier 2 code 81402 *Molecular pathology procedure, Level 3 (eg, >10 SNPs, 2-10 methylated variants, or 2-10 somatic variants [typically using non-sequencing target variant analysis], immunoglobulin and T-cell receptor gene rearrangements, duplication/deletion variants 1 exon*, which the RUC recommended at this meeting 0.50 work RVUs for 20 minutes of intra-service time **Based on these comparisons, the RUC recommends a work RVU of 0.58, the survey's 25<sup>th</sup> percentile, for CPT code 81264.**

**81262 IGH@ (Immunoglobulin heavy chain locus) (eg, leukemias and lymphomas, B-cell), gene rearrangement analysis to detect abnormal clonal population(s); direct probe methodology (eg, Southern blot)**

The RUC reviewed the survey data as presented by the specialty society which indicated that the median time for 81262 was 20 minutes. The RUC agreed that this time accurately reflects the amount of time required to perform the service. The RUC agreed with the specialty that although the key reference code 88182 *Flow cytometry, cell cycle or DNA analysis* (total time = 20 minutes, work RVU = 0.77) requires similar time compared to the surveyed code, 81262, the reference code is overall a more intense service to perform. The RUC also compared this service to 88172 *Cytopathology, evaluation of fine needle aspirate; immediate cytohistologic study to determine adequacy for diagnosis, first evaluation episode, each site*, (Intra-time=20 minutes, Work RVU=0.60) which requires similar physician work and time to perform. The specialty society also explained that this service keeps rank order with Tier 2 code 81402 *Molecular pathology procedure, Level 3 (eg, >10 SNPs, 2-10 methylated variants, or 2-10 somatic variants [typically using non-sequencing target variant analysis], immunoglobulin and T-cell receptor gene rearrangements, duplication/deletion variants 1 exon*, which the RUC recommended at this meeting 0.50 work RVUs for 20 minutes of intra-service time **Based on these comparisons, the RUC recommends a work RVU of 0.61, the survey's 25<sup>th</sup> percentile, for CPT code 81262.**

**81210 BRAF (v-raf murine sarcoma viral oncogene homolog B1) (eg, colon cancer), gene analysis, V600E variant**

The RUC reviewed the survey data as presented by the specialty society which indicated that the median time for 81210 was 15 minutes. The RUC agreed that this time accurately reflects the amount of time required to perform the service. The RUC agreed with the specialty that the key reference code 88291 *Cytogenetics and molecular cytogenetics, interpretation and report* (total time = 20 minutes, work RVU = 0.52) requires more time and intensity to perform compared to the surveyed code, 81210. The RUC also compared this service to 93784 *Ambulatory blood pressure monitoring, utilizing a system such as magnetic tape and/or computer disk, for 24 hours or longer; including recording, scanning analysis, interpretation and report* (intra-time=15 minutes, work RVU=0.38), which requires similar physician work and time to perform. The

specialty society also explained that this service keeps rank order with Tier 2 code 81403 *Molecular pathology procedure, Level 4 (eg, analysis of single exon by DNA sequence analysis, analysis of >10 amplicons using multiplex PCR in 2 or more independent reactions, mutation scanning or duplication/deletion variants of 2-5 exons)*, which the RUC recommended at this meeting 0.52 work RVUs for 28 minutes of intra-service time **Based on these comparisons, the RUC recommends a work RVU of 0.37, the survey's 25<sup>th</sup> percentile, for CPT code 81210.**

**81263 IGH@ (Immunoglobulin heavy chain locus) (eg, leukemia and lymphoma, B-cell), variable region somatic mutation analysis**

The RUC reviewed the survey data as presented by the specialty society which indicated that the median time for 81263 was 23 minutes. The RUC agreed that this time accurately reflects the amount of time required to perform the service. The RUC compared this service to 93784 *Ambulatory blood pressure monitoring, utilizing a system such as magnetic tape and/or computer disk, for 24 hours or longer; including recording, scanning analysis, interpretation and report* (intra-time=15 minutes, work RVU=0.38), which requires less work and time to perform. The specialty society also explained that this service keeps rank order with Tier 2 code 81403 *Molecular pathology procedure, Level 4 (eg, analysis of single exon by DNA sequence analysis, analysis of >10 amplicons using multiplex PCR in 2 or more independent reactions, mutation scanning or duplication/deletion variants of 2-5 exons)*, which the RUC recommended at this meeting 0.52 work RVUs for 28 minutes of intra-service time **Based on these comparisons, the RUC recommends a work RVU of 0.52, the survey's 25<sup>th</sup> percentile, for CPT code 81263.**

**81332 SERPINA1 (serpin peptidase inhibitor, clade A, alpha-1 antiproteinase, antitrypsin, member 1) (eg, alpha-1-antitrypsin deficiency), gene analysis, common variants (eg, \*S and \*Z)**

The RUC reviewed the survey data as presented by the specialty society which indicated that the median time for 81332 was 15 minutes. The RUC agreed that this time accurately reflects the amount of time required to perform the service. The RUC agreed with the specialty that the time associated with the key reference code 88291 *Cytogenetics and molecular cytogenetics, interpretation and report* (total time = 20 minutes, work RVU = 0.52) is more than the surveyed code. Further, the RUC also compared this service to 93784 *Ambulatory blood pressure monitoring, utilizing a system such as magnetic tape and/or computer disk, for 24 hours or longer; including recording, scanning analysis, interpretation and report* (intra-time=15 minutes, work RVU=0.38), which requires similar work and time to perform. The specialty society also explained that this service keeps rank order with Tier 2 code 81401 *Molecular pathology procedure, Level 2 (eg, 2-10 SNPs, 1 methylated variant, or 1 somatic variant [typically using nonsequencing target variant analysis], or detection of a dynamic mutation disorder/triplet repeat)*, which the RUC recommended at this meeting 0.40 work RVUs for 15 minutes of intra-service time. **Based on these comparisons, the RUC recommends a work RVU of 0.40, the survey's 25<sup>th</sup> percentile, for CPT code 81332.**

**81257 HBA1/HBA2 (alpha globin 1 and alpha globin 2) (eg, alpha thalassemia, Hb Bart hydrops fetalis syndrome, HbH disease), gene analysis, for common deletions or variant (eg, Southeast Asian, Thai, Filipino, Mediterranean, alpha3.7, alpha4.2, alpha20.5, and Constant Spring)**

The specialty society explained, and the RUC agreed, that the work RVU for this service could be best derived from crosswalking it directly to Tier 2 code 81402 *Molecular pathology procedure, Level 3 (eg, >10 SNPs, 2-10 methylated variants, or 2-10 somatic variants [typically using non-sequencing target variant analysis], immunoglobulin and T-cell receptor gene rearrangements, duplication/deletion variants 1 exon)*, which the RUC recommended at this meeting 0.50 work RVUs for 20 minutes of intra-service time. The RUC agreed that 20 minutes accurately

reflects the amount of time required to perform the service. The RUC also agreed with the specialty that the time associated with the key reference code 88291 *Cytogenetics and molecular cytogenetics, interpretation and report* (total time = 20 minutes, work RVU = 0.52) is similar compared to the surveyed code. **Based on these comparisons, the RUC recommends a work RVU of 0.50 for CPT code 81257.**

**81340 TRB@ (T cell antigen receptor, beta) (eg, leukemia and lymphoma), gene rearrangement analysis to detect abnormal clonal population(s); using amplification methodology (eg, polymerase chain reaction)**

The RUC reviewed the survey data as presented by the specialty society which indicated that the median time for 81340 was 25 minutes. The RUC agreed that this time accurately reflects the amount of time required to perform the service. The RUC compared the surveyed code to 88172 *Cytopathology, evaluation of fine needle aspirate; immediate cytohistologic study to determine adequacy for diagnosis, first evaluation episode, each site* (Intra-service time=20minutes, Work RVU=0.60) and noted that the surveyed code required more time to perform than the reference code. The specialty society also explained that this service keeps rank order with Tier 2 code 81402 *Molecular pathology procedure, Level 3 (eg, >10 SNPs, 2-10 methylated variants, or 2-10 somatic variants [typically using non-sequencing target variant analysis], immunoglobulin and T-cell receptor gene rearrangements, duplication/deletion variants 1 exon*, which the RUC recommended at this meeting 0.50 work RVUs for 20 minutes of intra-service time **Based on these comparisons, the RUC recommends a work RVU of 0.63, the survey's 25<sup>th</sup> percentile, for CPT code 81340.**

**81293 MLH1 (mutL homolog 1, colon cancer, nonpolyposis type 2) (eg, hereditary non-polyposis colorectal cancer, Lynch syndrome) gene analysis; known familial variants**

The specialty society explained, and the RUC agreed, that the work RVU for this service could be best derived from crosswalking it directly to Tier 2 code 81403 *Molecular pathology procedure, Level 4 (eg, analysis of single exon by DNA sequence analysis, analysis of >10 amplicons using multiplex PCR in 2 or more independent reactions, mutation scanning or duplication/deletion variants of 2-5 exons)* which the RUC recommended at this meeting 0.52 work RVUs for 28 minutes of intra-service time. The RUC agreed that this time accurately reflects the amount of time required to perform the service. The RUC also compared this service to 93784 *Ambulatory blood pressure monitoring, utilizing a system such as magnetic tape and/or computer disk, for 24 hours or longer; including recording, scanning analysis, interpretation and report* (intra-time=15 minutes, work RVU=0.38), which requires much less work and time to perform. **Based on these comparisons, the RUC recommends a work RVU of 0.52 for CPT code 81293.**

**81296 MSH2 (mutS homolog 2, colon cancer, nonpolyposis type 1) (eg, hereditary non-polyposis colorectal cancer, Lynch syndrome) gene analysis; known familial variants**

The specialty society explained that the work RVU for this service could be best derived from crosswalking it directly to Tier 2 code 81403 *Molecular pathology procedure, Level 4 (eg, analysis of single exon by DNA sequence analysis, analysis of >10 amplicons using multiplex PCR in 2 or more independent reactions, mutation scanning or duplication/deletion variants of 2-5 exons)* which the RUC recommended at this meeting 0.52 work RVUs for 28 minutes of intra-service time. The RUC agreed that this time accurately reflects the amount of time required to perform the service. The RUC also compared this service to 93784 *Ambulatory blood pressure monitoring, utilizing a system such as magnetic tape and/or computer disk, for 24 hours or longer; including recording, scanning analysis, interpretation and report* (intra-time=15 minutes, work

RVU=0.38), which requires much less work and time to perform. **Based on these comparisons, the RUC recommends a work RVU of 0.52 for CPT code 81296.**

**81299 MSH6 (mutS homolog 6 [E. coli]) (eg, hereditary non-polyposis colorectal cancer, Lynch syndrome) gene analysis; known familial variants**

The specialty society explained, and the RUC agreed, that the work RVU for this service could be best derived from crosswalking it directly to Tier 2 code 81403 *Molecular pathology procedure, Level 4 (eg, analysis of single exon by DNA sequence analysis, analysis of >10 amplicons using multiplex PCR in 2 or more independent reactions, mutation scanning or duplication/deletion variants of 2-5 exons)* which the RUC recommended at this meeting 0.52 work RVUs for 28 minutes of intra-service time. The RUC also compared this service to 93784 *Ambulatory blood pressure monitoring, utilizing a system such as magnetic tape and/or computer disk, for 24 hours or longer; including recording, scanning analysis, interpretation and report* (intra-time=15 minutes, work RVU=0.38), which is less complex and requires less physician work and time to perform. **Based on these comparisons, the RUC recommends a work RVU of 0.52 for CPT code 81299.**

**81303 MECP2 (methyl CpG binding protein 2) (eg, Rett syndrome) gene analysis; known familial variant**

The specialty society explained, and the RUC agreed, that the work RVU for this service could be best derived from crosswalking it directly to Tier 2 code 81403 *Molecular pathology procedure, Level 4 (eg, analysis of single exon by DNA sequence analysis, analysis of >10 amplicons using multiplex PCR in 2 or more independent reactions, mutation scanning or duplication/deletion variants of 2-5 exons)* which the RUC recommended at this meeting 0.52 work RVUs for 28 minutes of intra-service time. The RUC agreed that this time accurately reflects the amount of time required to perform the service. However, the surveyed code requires less intensity to perform than the reference code. The RUC also compared this service to 93784 *Ambulatory blood pressure monitoring, utilizing a system such as magnetic tape and/or computer disk, for 24 hours or longer; including recording, scanning analysis, interpretation and report* (intra-time=15 minutes, work RVU=0.38), which is less complex and requires less physician work and time to perform. **Based on these comparisons, the RUC recommends a work RVU of 0.52 for CPT code 81303.**

**81304 MECP2 (methyl CpG binding protein 2) (eg, Rett syndrome) gene analysis; duplication/deletion variants**

The specialty society explained, and the RUC agreed, that the work RVU for this service could be best derived from crosswalking it directly to Tier 2 code 81403 *Molecular pathology procedure, Level 4 (eg, analysis of single exon by DNA sequence analysis, analysis of >10 amplicons using multiplex PCR in 2 or more independent reactions, mutation scanning or duplication/deletion variants of 2-5 exons)* which the RUC recommended at this meeting 0.52 work RVUs for 28 minutes of intra-service time. The RUC agreed that this time accurately reflects the amount of time required to perform the service. The RUC also compared this service to 93784 *Ambulatory blood pressure monitoring, utilizing a system such as magnetic tape and/or computer disk, for 24 hours or longer; including recording, scanning analysis, interpretation and report* (intra-time=15 minutes, work RVU=0.38), which is less complex and requires less physician work and time to perform. **Based on these comparisons, the RUC recommends a work RVU of 0.52 for CPT code 81304.**

**81318 PMS2 (postmeiotic segregation increased 2 [*S. cerevisiae*]) (eg, hereditary non-polyposis colorectal cancer, Lynch syndrome) gene analysis; known familial variants**

The specialty society explained, and the RUC agreed, that the work RVU for this service could be best derived from crosswalking it directly to Tier 2 code 81403 *Molecular pathology procedure, Level 4 (eg, analysis of single exon by DNA sequence analysis, analysis of >10 amplicons using multiplex PCR in 2 or more independent reactions, mutation scanning or duplication/deletion variants of 2-5 exons)* which the RUC recommended at this meeting 0.52 work RVUs for 28 minutes of intra-service time. The RUC agreed that this time accurately reflects the amount of time required to perform the service. The RUC also compared this service to 93784 *Ambulatory blood pressure monitoring, utilizing a system such as magnetic tape and/or computer disk, for 24 hours or longer; including recording, scanning analysis, interpretation and report* (intra-time=15 minutes, work RVU=0.38), which is less complex and requires less physician work and time to perform. **Based on these comparisons, the RUC recommends a work RVU of 0.52 for CPT code 81318.**

**81300 MSH6 (mutS homolog 6 [*E. coli*]) (eg, hereditary non-polyposis colorectal cancer, Lynch syndrome) gene analysis; duplication/deletion variants**

The specialty society explained, and the RUC agreed, that the work RVU for this service could be best derived from crosswalking it directly to Tier 2 code 81404 *Molecular pathology procedure, Level 5 (eg, analysis of 2-5 exons by DNA sequence analysis, mutation scanning or duplication/deletion variants of 6-10 exons, or characterization of a dynamic mutation disorder/triplet repeat by Southern blot analysis)* which the RUC recommended at this meeting 0.65 work RVUs for 30 minutes of intra-service time. The RUC agreed that this time accurately reflects the amount of time required to perform the service. The RUC also compared this service to 88291 *Cytogenetics and molecular cytogenetics, interpretation and report* (intra-time=20 minutes, work RVU=0.52), which requires less work and time to perform. The RUC also compared this code to 86077 *Blood bank physician services; difficult cross match and/or evaluation of irregular antibody(s), interpretation and written report* (Intra-time=40 minutes, work RVU=0.94) and noted that the surveyed code requires less work and time to perform. **Based on these comparisons, the RUC recommends a work RVU of 0.65 for CPT code 81300.**

**81302 MECP2 (methyl CpG binding protein 2) (eg, Rett syndrome) gene analysis; full sequence analysis**

The specialty society explained, and the RUC agreed, that the work RVU for this service could be best derived from crosswalking it directly to Tier 2 code 81404 *Molecular pathology procedure, Level 5 (eg, analysis of 2-5 exons by DNA sequence analysis, mutation scanning or duplication/deletion variants of 6-10 exons, or characterization of a dynamic mutation disorder/triplet repeat by Southern blot analysis)* which the RUC recommended at this meeting 0.65 work RVUs for 30 minutes of intra-service time. The RUC agreed that this time accurately reflects the amount of time required to perform the service. The RUC also compared this service to 88291 *Cytogenetics and molecular cytogenetics, interpretation and report* (intra-time=20 minutes, work RVU=0.52), which requires less work and time to perform. The RUC also compared this code to 86077 *Blood bank physician services; difficult cross match and/or evaluation of irregular antibody(s), interpretation and written report* (Intra-time=40 minutes, work RVU=0.94) and noted that the surveyed code requires less work and time to perform. **Based on these comparisons, the RUC recommends a work RVU of 0.65 for CPT code 81302.**

**81294 MLH1 (mutL homolog 1, colon cancer, nonpolyposis type 2) (eg, hereditary non-polyposis colorectal cancer, Lynch syndrome) gene analysis; duplication/deletion variants**

The specialty society explained, and the RUC agreed, that the work RVU for this service could be best derived from crosswalking it directly to Tier 2 code 81405 *Molecular pathology procedure, Level 6 (eg, analysis of 6-10 exons by DNA sequence analysis, mutation scanning or duplication/deletion variants of 11-25 exons)* which the RUC recommended at this meeting 0.80 work RVUs for 30 minutes of intra-service time. The RUC agreed that this time accurately reflects the amount of time required to perform the service. The RUC also compared this service to 88291 *Cytogenetics and molecular cytogenetics, interpretation and report* (intra-time=20 minutes, work RVU=0.52), which requires less work and time to perform. The RUC also compared this code to 86077 *Blood bank physician services; difficult cross match and/or evaluation of irregular antibody(s), interpretation and written report* (Intra-time=40 minutes, work RVU=0.94) and noted that the surveyed code requires less work and time to perform. **Based on these comparisons, the RUC recommends a work RVU of 0.80 for CPT code 81294.**

**81297 MSH2 (mutS homolog 2, colon cancer, nonpolyposis type 1) (eg, hereditary non-polyposis colorectal cancer, Lynch syndrome) gene analysis; duplication/deletion variants**

The specialty society explained, and the RUC agreed, that the work RVU for this service could be best derived from crosswalking it directly to Tier 2 code 81405 *Molecular pathology procedure, Level 6 (eg, analysis of 6-10 exons by DNA sequence analysis, mutation scanning or duplication/deletion variants of 11-25 exons)* which the RUC recommended at this meeting 0.80 work RVUs for 30 minutes of intra-service time. The RUC agreed that this time accurately reflects the amount of time required to perform the service. The RUC also compared this service to 88291 *Cytogenetics and molecular cytogenetics, interpretation and report* (intra-time=20 minutes, work RVU=0.52), which requires less work and time to perform. The RUC also compared this code to 86077 *Blood bank physician services; difficult cross match and/or evaluation of irregular antibody(s), interpretation and written report* (Intra-time=40 minutes, work RVU=0.94) and noted that the surveyed code requires less work and time to perform. **Based on these comparisons, the RUC recommends a work RVU of 0.80 for CPT code 81297.**

**81298 MSH6 (mutS homolog 6 [E. coli]) (eg, hereditary non-polyposis colorectal cancer, Lynch syndrome) gene analysis; full sequence analysis**

The specialty society explained, and the RUC agreed, that the work RVU for this service could be best derived from crosswalking it directly to Tier 2 code 81405 *Molecular pathology procedure, Level 6 (eg, analysis of 6-10 exons by DNA sequence analysis, mutation scanning or duplication/deletion variants of 11-25 exons)* which the RUC recommended at this meeting 0.80 work RVUs for 30 minutes of intra-service time. The RUC agreed that this time accurately reflects the amount of time required to perform the service. The RUC also compared this service to 88291 *Cytogenetics and molecular cytogenetics, interpretation and report* (intra-time=20 minutes, work RVU=0.52), which requires less work and time to perform. The RUC also compared this code to 86077 *Blood bank physician services; difficult cross match and/or evaluation of irregular antibody(s), interpretation and written report* (Intra-time=40 minutes, work RVU=0.94) and noted that the surveyed code requires less work and time to perform. **Based on these comparisons, the RUC recommends a work RVU of 0.80 for CPT code 81298.**

**81319 PMS2 (postmeiotic segregation increased 2 [*S. cerevisiae*]) (eg, hereditary non-polyposis colorectal cancer, Lynch syndrome) gene analysis; duplication/deletion variants**

The specialty society explained, and the RUC agreed, that the work RVU for this service could be best derived from crosswalking it directly to Tier 2 code 81405 *Molecular pathology procedure, Level 6 (eg, analysis of 6-10 exons by DNA sequence analysis, mutation scanning or duplication/deletion variants of 11-25 exons)* which the RUC recommended at this meeting 0.80 work RVUs for 30 minutes of intra-service time. The RUC agreed that this time accurately reflects the amount of time required to perform the service. The RUC also compared this service to 88291 *Cytogenetics and molecular cytogenetics, interpretation and report* (intra-time=20 minutes, work RVU=0.52), which requires less work and time to perform. The RUC also compared this code to 86077 *Blood bank physician services; difficult cross match and/or evaluation of irregular antibody(s), interpretation and written report* (Intra-time=40 minutes, work RVU=0.94) and noted that the surveyed code requires less work and time to perform. **Based on these comparisons, the RUC recommends a work RVU of 0.80 for CPT code 81319.**

**81292 MLH1 (mutL homolog 1, colon cancer, nonpolyposis type 2) (eg, hereditary non-polyposis colorectal cancer, Lynch syndrome) gene analysis; full sequence analysis**

The specialty society explained, and the RUC agreed, that the work RVU for this service could be best derived from crosswalking it directly to Tier 2 code 81406 *Molecular pathology procedure, Level 7 (eg, analysis of 11-25 exons by DNA sequence analysis, mutation scanning or duplication/deletion variants of 26-50 exons, cytogenomic array analysis for neoplasia)*, which the RUC recommended at this meeting 1.40 work RVUs for 60 minutes of intra-service time. The RUC agreed that this time accurately reflects the amount of time required to perform the service. The RUC compared this code to 96204 *Blood bank physician services; difficult cross match and/or evaluation of irregular antibody(s), interpretation and written report* (Intra-time=40 minutes, work RVU=0.94) and noted that the surveyed code requires more work and time to perform. The RUC also compared the surveyed code to 88325 *Consultation, comprehensive, with review of records and specimens, with report on referred material* (Intra-service time=80minutes, work RVU=2.50) and acknowledged that the surveyed code requires less work and time to perform. **Based on these comparisons, the RUC recommends a work RVU of 1.40 for CPT code 81292.**

**81295 MSH2 (mutS homolog 2, colon cancer, nonpolyposis type 1) (eg, hereditary non-polyposis colorectal cancer, Lynch syndrome) gene analysis; full sequence analysis**

The specialty society explained, and the RUC agreed, that the work RVU for this service could be best derived from crosswalking it directly to Tier 2 code 81406 *Molecular pathology procedure, Level 7 (eg, analysis of 11-25 exons by DNA sequence analysis, mutation scanning or duplication/deletion variants of 26-50 exons, cytogenomic array analysis for neoplasia)*, which the RUC recommended at this meeting 1.40 work RVUs for 60 minutes of intra-service time. The RUC agreed that this time accurately reflects the amount of time required to perform the service. The RUC compared this code to 96204 *Blood bank physician services; difficult cross match and/or evaluation of irregular antibody(s), interpretation and written report* (Intra-time=40 minutes, work RVU=0.94) and noted that the surveyed code requires more work and time to perform. The RUC also compared the surveyed code to 88325 *Consultation, comprehensive, with review of records and specimens, with report on referred material* (Intra-service time=80minutes, work RVU=2.50) and acknowledged that the surveyed code requires less work and time to perform. **Based on these comparisons, the RUC recommends a work RVU of 1.40 for CPT code 81295.**

**81317 PMS2 (postmeiotic segregation increased 2 [*S. cerevisiae*]) (eg, hereditary non-polyposis colorectal cancer, Lynch syndrome) gene analysis; full sequence analysis**

The specialty society explained, and the RUC agreed, that the work RVU for this service could be best derived from crosswalking it directly to Tier 2 code 81406 *Molecular pathology procedure, Level 7 (eg, analysis of 11-25 exons by DNA sequence analysis, mutation scanning or duplication/deletion variants of 26-50 exons, cytogenomic array analysis for neoplasia*, which the RUC recommended at this meeting 1.40 work RVUs for 60 minutes of intra-service time. The RUC agreed that this time accurately reflects the amount of time required to perform the service. The RUC compared this code to 96204 *Blood bank physician services; difficult cross match and/or evaluation of irregular antibody(s), interpretation and written report* (Intra-time=40 minutes, work RVU=0.94) and noted that the surveyed code requires more work and time to perform. The RUC also compared the surveyed code to 88325 *Consultation, comprehensive, with review of records and specimens, with report on referred material* (Intra-service time=80minutes, work RVU=2.50) and acknowledged that the surveyed code requires less work and time to perform. **Based on these comparisons, the RUC recommends a work RVU of 1.40 for CPT code 81317.**

**81341 TRB@ (T cell antigen receptor, beta) (eg, leukemia and lymphoma), gene rearrangement analysis to detect abnormal clonal population(s); using direct probe methodology (eg, Southern blot)**

The RUC reviewed the survey data as presented by the specialty society which indicated that the median time for 81341 was 19 minutes. The RUC agreed that this time accurately reflects the amount of physician time required to perform the service. The specialty society explained, and the RUC agreed, that the work RVU for this service could be best derived from crosswalking it directly to 88388 *Macroscopic examination, dissection, and preparation of tissue for non-microscopic analytical studies (eg, nucleic acid-based molecular studies); in conjunction with a touch imprint, intraoperative consultation, or frozen section, each tissue preparation (eg, a single lymph node)* (work RVU=0.45) The RUC agreed that this work RVU accurately reflected the amount of effort required to perform the service. The RUC compared this code to 93784 *Ambulatory blood pressure monitoring, utilizing a system such as magnetic tape and/or computer disk, for 24 hours or longer; including recording, scanning analysis, interpretation and report* (Intra-Service time=15 minutes, work RVU=0.38) and noted that the surveyed code requires more time and work to perform than the reference code. Further, the RUC compared the surveyed code to 95251 *Ambulatory continuous glucose monitoring of interstitial tissue fluid via a subcutaneous sensor for a minimum of 72 hours; interpretation and report* (Intra-Service time=30 minutes, Work RVU=0.85) and noted that the surveyed code requires less work and time compared to this reference code. **Based on these comparisons, the RUC recommends 0.45 Work RVUs for 81341.**

**81370 HLA Class I and II typing, low resolution (eg, antigen equivalents); HLA-A, -B, -C, -DRB1/3/4/5, and -DQB1**

The RUC reviewed the survey data as presented by the specialty society which indicated that the median time for 81370 was 15 minutes. The RUC agreed that this time accurately reflects the amount of time required to perform the service. The RUC agreed with the specialty that the time associated with reference code 88172 *Cytopathology, evaluation of fine needle aspirate; immediate cytohistologic study to determine adequacy for diagnosis, first evaluation episode, each site* (total time = 20 minutes, work RVU = 0.60) is more than the surveyed code. Further, the RUC also compared this service to 93784 *Ambulatory blood pressure monitoring, utilizing a system such as magnetic tape and/or computer disk, for 24 hours or longer; including recording, scanning analysis, interpretation and report* (intra-time=15 minutes, work RVU=0.38), which although

requires similar time to perform is overall a less complex and intense service to perform in comparison to the surveyed code. **Based on these comparisons, the RUC recommends a work RVU of 0.54, the survey's 25<sup>th</sup> percentile, for CPT code 81370.**

**81371 HLA Class I and II typing, low resolution (eg, antigen equivalents); HLA-A, -B, and -DRB1/3/4/5 (eg, verification typing)**

The RUC reviewed the survey data as presented by the specialty society which indicated that the median time for 81371 was 30 minutes. The RUC agreed that this time accurately reflects the amount of time required to perform the service. The RUC agreed with the specialty that the time associated with reference code 88291 *Cytogenetics and molecular cytogenetics, interpretation and report* (total time=20 minutes, work RVU=0.52) is less than the surveyed code and that the reference code requires less intensity to perform. Further, the RUC also compared this service to 86077 *Blood bank physician services; difficult cross match and/or evaluation of irregular antibody(s), interpretation and written report* (intra-time=40 minutes, work RVU=0.94), which requires more work and time to perform in comparison to the surveyed code. **Based on these comparisons, the RUC recommends a work RVU of 0.60, the survey's 25<sup>th</sup> percentile, for CPT code 81371.**

**81372 HLA Class I typing, low resolution (eg, antigen equivalents); complete (ie, HLA-A, -B, and -C)**

The RUC reviewed the survey data as presented by the specialty society which indicated that the median time for 81372 was 15 minutes. The RUC agreed that this time accurately reflects the amount of time required to perform the service. The RUC agreed with the specialty that the time associated with reference code 88172 *Cytopathology, evaluation of fine needle aspirate; immediate cytohistologic study to determine adequacy for diagnosis, first evaluation episode, each site* (total time=20 minutes, work RVU=0.60) is more than the surveyed code and that the reference code requires more intensity to perform. Further, the RUC also compared this service to 93784 *Ambulatory blood pressure monitoring, utilizing a system such as magnetic tape and/or computer disk, for 24 hours or longer; including recording, scanning analysis, interpretation and report* (intra-time=15 minutes, work RVU=0.38), which although it requires similar time to perform, it is a less complex and intense service to perform in comparison to the surveyed code. **Based on these comparisons, the RUC recommends a work RVU of 0.52, the survey's 25<sup>th</sup> percentile, for CPT code 81372.**

**81373 HLA Class I typing, low resolution (eg, antigen equivalents); one locus (eg, HLA-A, -B, or -C), each**

The RUC reviewed the survey data as presented by the specialty society which indicated that the median time for 81373 was 15 minutes. The RUC agreed that this time accurately reflects the amount of time required to perform the service. The RUC agreed with the specialty that the time associated with reference code 86320 *Immunoelectrophoresis; serum* (total time = 17 minutes, work RVU = 0.37) is similar compared to the surveyed code and that the reference code requires similar intensity to perform compared to this reference code. Further, the RUC also compared this service to 93784 *Ambulatory blood pressure monitoring, utilizing a system such as magnetic tape and/or computer disk, for 24 hours or longer; including recording, scanning analysis, interpretation and report* (intra-time=15 minutes, work RVU=0.38), which also requires similar time and intensity to perform compared to the surveyed code. **Based on these comparisons, the RUC recommends a work RVU of 0.37, the survey's 25<sup>th</sup> percentile, for CPT code 81373.**

**81374 HLA Class I typing, low resolution (eg, antigen equivalents); one antigen equivalent (eg, B\*27), each**

The RUC reviewed the survey data as presented by the specialty society which indicated that the median time for 81374 was 13 minutes. The RUC agreed that this time accurately reflects the amount of time required to perform the service. The RUC agreed with the specialty that the time associated with reference code 86320 *Immunoelectrophoresis; serum* (total time = 17 minutes, work RVU = 0.37) is slightly more compared to the surveyed code and that the reference code requires slightly more intensity to perform compared to this reference code. Further, the RUC also compared this service to 93784 *Ambulatory blood pressure monitoring, utilizing a system such as magnetic tape and/or computer disk, for 24 hours or longer; including recording, scanning analysis, interpretation and report* (intra-time=15 minutes, work RVU=0.38), which also requires slightly more time to perform compared to the surveyed code. **Based on these comparisons, the RUC recommends a work RVU of 0.34, the survey's 25<sup>th</sup> percentile, for CPT code 81374.**

**81375 HLA Class II typing, low resolution (eg, antigen equivalents); HLA-DRB1/3/4/5 and -DQB1**

The RUC reviewed the survey data as presented by the specialty society which indicated that the median time for 81375 was 15 minutes. The RUC agreed that this time accurately reflects the amount of time required to perform the service. The RUC agreed with the specialty that the time associated with reference code 88182 *Flow cytometry, cell cycle or DNA analysis* (total time = 20 minutes, work RVU = 0.77) is more than the surveyed code and that the reference code requires more intensity to perform. Further, the RUC also compared this service to 93784 *Ambulatory blood pressure monitoring, utilizing a system such as magnetic tape and/or computer disk, for 24 hours or longer; including recording, scanning analysis, interpretation and report* (intra-time=15 minutes, work RVU=0.38), which although it requires similar time to perform the reference code is a less complex and intense service to perform in comparison to the surveyed code. **Based on these comparisons, the RUC recommends a work RVU of 0.60, the survey's 25<sup>th</sup> percentile, for CPT code 81375.**

**81376 HLA Class II typing, low resolution (eg, antigen equivalents); one locus (eg, HLA-DRB1/3/4/5, -DQB1, -DQA1, -DPB1, or -DPA1), each**

The RUC reviewed the survey data as presented by the specialty society which indicated that the median time for 81376 was 15 minutes. The RUC agreed that this time accurately reflects the amount of time required to perform the service. The RUC agreed with the specialty that the time associated with reference code 88182 *Flow cytometry, cell cycle or DNA analysis* (total time = 20 minutes, work RVU = 0.77) is more than the surveyed code.. Further, the RUC also compared this service to 93784 *Ambulatory blood pressure monitoring, utilizing a system such as magnetic tape and/or computer disk, for 24 hours or longer; including recording, scanning analysis, interpretation and report* (intra-time=15 minutes, work RVU=0.38), which although it requires similar time to perform the reference code is less complex and intense service to perform in comparison to the surveyed code. **Based on these comparisons, the RUC recommends a work RVU of 0.50, the survey's 25<sup>th</sup> percentile, for CPT code 81376.**

**81377 HLA Class II typing, low resolution (eg, antigen equivalents); one antigen equivalent, each**

The RUC reviewed the survey data as presented by the specialty society which indicated that the median time for 81377 was 15 minutes. The RUC agreed that this time accurately reflects the amount of time required to perform the service. The RUC agreed with the specialty that the time associated with reference code 88172 *Cytopathology, evaluation of fine needle aspirate; immediate cytohistologic study to determine adequacy for*

*diagnosis, first evaluation episode, each site* (total time = 20 minutes, work RVU = 0.60) is more than the surveyed code. Further, the RUC also compared this service to 93784 *Ambulatory blood pressure monitoring, utilizing a system such as magnetic tape and/or computer disk, for 24 hours or longer; including recording, scanning analysis, interpretation and report* (intra-time=15 minutes, work RVU=0.38), which although requires similar time to perform it is a less intense service to perform in comparison to the surveyed code. **Based on these comparisons, the RUC recommends a work RVU of 0.43, the survey's 25<sup>th</sup> percentile, for CPT code 81377.**

**81378 HLA Class I and II typing, high resolution (ie, alleles or allele groups), HLA-A, -B, -C, and -DRB1**

The RUC reviewed the survey data as presented by the specialty society which indicated that the median time for 81378 was 20 minutes. The RUC agreed that this time accurately reflects the amount of time required to perform the service. The specialty society recommended and the RUC agreed that the best way to develop a work RVU for this service was to directly crosswalk it to 88388 *Macroscopic examination, dissection, and preparation of tissue for non-microscopic analytical studies (eg, nucleic acid-based molecular studies); in conjunction with a touch imprint, intraoperative consultation, or frozen section, each tissue preparation (eg, a single lymph node)* (work RVU=0.45). The RUC agreed with the specialty that the key reference code 88291 *Cytogenetics and molecular cytogenetics, interpretation and report* (total time = 20 minutes, work RVU = 0.52) requires similar time compared to the surveyed code, 81378. However, this reference code is a slightly more intense procedure to perform in comparison to the surveyed code. The RUC also compared this service to 93784 *Ambulatory blood pressure monitoring, utilizing a system such as magnetic tape and/or computer disk, for 24 hours or longer; including recording, scanning analysis, interpretation and report* (intra-time=15 minutes, work RVU=0.38), which requires similar time to perform however, the surveyed code is more complex and intense to perform. **Based on these comparisons, the RUC recommends a work RVU of 0.45 for CPT code 81378.**

**81379 HLA Class I typing, high resolution (ie, alleles or allele groups); complete (ie, HLA-A, -B, and -C)**

The RUC reviewed the survey data as presented by the specialty society which indicated that the median time for 81379 was 15 minutes. The RUC agreed that this time accurately reflects the amount of time required to perform the service. The specialty society recommended and the RUC agreed that the best way to develop a work RVU for this service was to directly crosswalk it to 88388 *Macroscopic examination, dissection, and preparation of tissue for non-microscopic analytical studies (eg, nucleic acid-based molecular studies); in conjunction with a touch imprint, intraoperative consultation, or frozen section, each tissue preparation (eg, a single lymph node)* (work RVU=0.45). The RUC agreed with the specialty that the key reference code 88291 *Cytogenetics and molecular cytogenetics, interpretation and report* (total time = 20 minutes, work RVU = 0.52) requires more time compared to the surveyed code. The RUC also compared this service to 93784 *Ambulatory blood pressure monitoring, utilizing a system such as magnetic tape and/or computer disk, for 24 hours or longer; including recording, scanning analysis, interpretation and report* (intra-time=15 minutes, work RVU=0.38), which requires similar time to perform however, the surveyed code is more complex and intense to perform. **Based on these comparisons, the RUC recommends a work RVU of 0.45 for CPT code 81379.**

**81380 HLA Class I typing, high resolution (ie, alleles or allele groups); one locus (eg, HLA-A, -B, or -C), each**

The RUC reviewed the survey data as presented by the specialty society which indicated that the median physician time for 81380 was 15 minutes. The RUC agreed that this time accurately reflects the amount of time required to perform the service. The specialty society recommended and the RUC agreed that the best way to develop a work RVU for this service was to directly crosswalk it to 88388 *Macroscopic examination, dissection, and preparation of tissue for non-microscopic analytical studies (eg, nucleic acid-based molecular studies); in conjunction with a touch imprint, intraoperative consultation, or frozen section, each tissue preparation (eg, a single lymph node)* (work RVU=0.45). The RUC agreed with the specialty that the key reference code 88291 *Cytogenetics and molecular cytogenetics, interpretation and report* (total time = 20 minutes, work RVU = 0.52) requires more time compared to the surveyed code. The RUC also compared this service to 93784 *Ambulatory blood pressure monitoring, utilizing a system such as magnetic tape and/or computer disk, for 24 hours or longer; including recording, scanning analysis, interpretation and report* (intra-time=15 minutes, work RVU=0.38), which requires similar time to perform however, the surveyed code requires more intensity to perform. **Based on these comparisons, the RUC recommends a work RVU of 0.45 for CPT code 81380.**

**81381 HLA Class I typing, high resolution (ie, alleles or allele groups); one allele or allele group (eg, B\*57:01P), each**

The specialty society recommended and the RUC agreed that the best way to evaluate this service was to directly crosswalk it to 88388 *Macroscopic examination, dissection, and preparation of tissue for non-microscopic analytical studies (eg, nucleic acid-based molecular studies); in conjunction with a touch imprint, intraoperative consultation, or frozen section, each tissue preparation (eg, a single lymph node)* (Intra-service=12minutes, work RVU=0.45) as these services require the same time and intensity to perform. The RUC agreed with the specialty that the key reference code 88291 *Cytogenetics and molecular cytogenetics, interpretation and report* (total time = 20 minutes, work RVU = 0.52) requires more time compared to the surveyed code, 81381 and this reference code is a slightly more intense procedure to perform in comparison to the surveyed code. **Based on these comparisons, the RUC recommends a work RVU of 0.45 for CPT code 81381.**

**81382 HLA Class II typing, high resolution (ie, alleles or allele groups); one locus (eg, HLA-DRB1, -DRB3,-DRB4, -DRB5, -DQB1, -DQA1, -DPB1, or -DPA1), each**

The RUC reviewed the survey data as presented by the specialty society which indicated that the median physician time for 81382 was 15 minutes. The RUC agreed that this time accurately reflects the amount of time required to perform the service. The specialty society recommended and the RUC agreed that the best way to develop a work RVU for this service was to directly crosswalk it to 88388 *Macroscopic examination, dissection, and preparation of tissue for non-microscopic analytical studies (eg, nucleic acid-based molecular studies); in conjunction with a touch imprint, intraoperative consultation, or frozen section, each tissue preparation (eg, a single lymph node)* (work RVU=0.45). The RUC agreed with the specialty that the key reference code 88291 *Cytogenetics and molecular cytogenetics, interpretation and report* (total time = 20 minutes, work RVU = 0.52) requires more time compared to the surveyed code, 81382 and this reference code is a slightly more intense procedure to perform in comparison to the surveyed code. The RUC also compared this service to 93784 *Ambulatory blood pressure monitoring, utilizing a system such as magnetic tape and/or computer disk, for 24 hours or longer; including recording, scanning analysis, interpretation and report* (intra-time=15 minutes, work RVU=0.38), which requires similar time to perform however, the surveyed code is requires more complex and intense to perform. **Based on these comparisons, the RUC recommends a work RVU of 0.45 for CPT code 81382.**

**81383 HLA Class II typing, high resolution (ie, alleles or allele groups); one allele or allele group (eg, HLA-DQB1\*06:02P), each**

The RUC reviewed the survey data as presented by the specialty society which indicated that the median time for 81383 was 15 minutes. The RUC agreed that this time accurately reflects the amount of time required to perform the service. The specialty society recommended and the RUC agreed that the best way to develop a work RVU for this service was to directly crosswalk it to 88388 *Macroscopic examination, dissection, and preparation of tissue for non-microscopic analytical studies (eg, nucleic acid-based molecular studies); in conjunction with a touch imprint, intraoperative consultation, or frozen section, each tissue preparation (eg, a single lymph node)* (work RVU=0.45). The RUC agreed with the specialty that the key reference code 88291 *Cytogenetics and molecular cytogenetics, interpretation and report* (total time = 20 minutes, work RVU = 0.52) requires more time compared to the surveyed code, 81383 and this reference code is a slightly more intense procedure to perform in comparison to the surveyed code. The RUC also compared this service to 93784 *Ambulatory blood pressure monitoring, utilizing a system such as magnetic tape and/or computer disk, for 24 hours or longer; including recording, scanning analysis, interpretation and report* (intra-time=15 minutes, work RVU=0.38), which requires similar time to perform however, the surveyed code is more complex and intense to perform. **Based on these comparisons, the RUC recommends a work RVU of 0.45 for CPT code 81383.**

#### **Practice Expense**

The specialty provided data based on assumed batch sizes and modified these batch size estimates to ensure maximum efficiency for today's practice. However the RUC agreed that the batch sizes should be re-examined when greater experience is available for these services. Further, The specialty society explained that the majority of these services are being crosswalked with minor differences to the practice expense inputs associated with the molecular pathology services that were approved at the April 2011 RUC Meeting. The remainder of the Molecular Pathology services, specifically, the HLA services, had new practice expense inputs. The PE Subcommittee reviewed all the recommended practice expense inputs over a conference call and during the PE Subcommittee meeting and made minor changes mostly pertaining to duplication in supplies and equipment, which were all subsequently approved by the RUC.

#### **Work Neutrality**

Reviewing the Medicare utilization data for 83912 *Molecular diagnostics; interpretation and report* (work RVU = 0.37) and the specialty's estimate of utilization of these individual services, the RUC understands that these recommendations will be work neutral to the family.

#### **New Technology**

The entire set of molecular pathology codes should be re-reviewed after claims data are available and there is experience with the new coding system. The physician time, work, and practice expense inputs should all be reviewed again in the future as these estimates are based on a good faith effort using available information in 2011.

#### **Flagging in the RUC Database**

The RUC recommends that all of the molecular pathology services with less than 30 survey responses should be flagged in the RUC database so that they are not used to validate the proposed work associated with any CPT codes under RUC review.

| CPT Code<br>(●New)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Tracking<br>Number | CPT Descriptor | Global<br>Period | Source of Current Work<br>RVU* | Work RVU<br>Recommendation |

| <p>Molecular pathology procedures are medical laboratory procedures involving the analyses of nucleic acid to detect variants in genes that may be indicative of germline (eg, constitutional disorders) or somatic (eg, neoplasia) conditions, or to test for histocompatibility antigens (eg, HLA). Code selection is typically based on the specific gene(s) that is being analyzed. Genes are described using Human Genome Organization (HUGO) approved gene names and are italicized in the code descriptors. <u>Gene names were taken from tables of the HUGO Gene Nomenclature Committee (HGNC) at the time the CPT codes were developed. For the most part, Human Genome Variation Society (HGVS) recommendations were followed for the names of specific molecular variants. The familiar name is used for some variants because defined criteria were not in place when the variant was first described or because HGVS recommendations were changed over time (eg, intronic variants, processed proteins).</u> When the gene name is represented by an abbreviation, the abbreviation is listed first, followed by the full gene name italicized in parentheses (eg, “F5 [<i>coagulation Factor V</i>]”), except for the HLA series of codes. Proteins or diseases commonly associated with the genes are listed as examples in the code descriptors. The examples do not represent all conditions in which testing of the gene may be indicated.</p> <p>Codes that describe tests to assess for the presence of gene variants (see definitions) use common gene variant names. Typically, all of the listed variants would be tested. However, these lists are not exclusive. If other variants are also tested in the analysis, they would be included in the procedure and not reported separately. Full gene sequencing should not be reported using codes that assess for the presence of gene variants unless specifically stated in the code descriptor. The molecular pathology codes include all analytical services performed in the test (eg, cell lysis, nucleic acid stabilization, extraction, digestion, amplification, and detection). Any procedures required prior to cell lysis (eg, microdissection, codes 88380 and 88381) should be reported separately.</p> <p>The molecular pathology codes include all analytical services performed in the test (eg, cell lysis, nucleic acid stabilization, extraction, digestion, amplification, and detection). Any procedures required prior to cell lysis (eg, microdissection, codes 88380 and 88381) should be reported separately.</p> <p>The results of the procedure may require interpretation by a physician. When only the interpretation and report are performed, modifier 26 may be appended to the specific molecular pathology code.</p> <p>All analyses are qualitative unless otherwise noted.</p> <p>For microbial identification, see 87149-87153 and 87470-87801, and 87900-87904. For in situ hybridization analyses, see 88271-88275 and 88365-88368.</p> |                    |                |                  |                                |                            |

| <p>Human Leukocyte Antigen (HLA) typing is performed to assess compatibility of recipients and potential donors as a part of solid organ and hematopoietic stem cell pretransplant testing. HLA testing is also performed to identify HLA alleles and allele groups (antigen equivalents) associated with specific diseases and individualized responses to drug therapy (eg, HLA-B*27 and ankylosing spondylitis and HLA-B*57:01 and abacavir hypersensitivity), as well as other clinical uses. One or more HLA genes may be tested in specific clinical situations (eg, HLA-DQB1 for narcolepsy and HLA-A, -B, -C, -DRB1 and -DQB1 for kidney transplantation). Each HLA gene typically has multiple variant alleles or alleles groups that can be identified by typing. For HLA result reporting, a low resolution HLA type is denoted by a two digit HLA name (eg, A*02) and <u>intermediate resolution typing by a string of alleles or an NMDP (National Marrow Donor Program) code (eg, B*14:01/07N/08/12/14, B*39CKGN). Both low and intermediate resolution, both of which are considered low resolution for code assignment. and High resolution typing resolves the common well defined (CWD) alleles and is usually denoted by a greater at least 4 number of digits (eg, A*02:02, *03:01:01:01, A*26:01:01G, and C*03:04P), however, high resolution typing may include some ambiguities for rare alleles, which may be reported as a string of alleles or an NMDP code. If additional testing is required to resolve ambiguous allele combinations for high resolution typing, # this is included in the base HLA typing codes below. The gene names have been italicized similar to the other molecular pathology codes.</u></p> |                    |                                                                                                                                                                                                                                                                     |                  |                                |                            |

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 81210      Tracking Number   Z1      Original Specialty Recommended RVU: **0.37**  
 Presented Recommended RVU: **0.37**  
 Global Period: XXX      RUC Recommended RVU: **0.37**

CPT Descriptor: BRAF (v-raf murine sarcoma viral oncogene homolog B1) (eg, colon cancer), gene analysis, V600E variant

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 54-year-old man with metastatic colorectal carcinoma is being considered for targeted therapy with anti-epidermal growth factor receptor (EGFR) monoclonal antibodies. Initial molecular studies indicate the tumor does not contain any of 12 common KRAS mutations at codons 12 or 13. A tumor-rich tissue sample is submitted for BRAF gene mutation testing.

Percentage of Survey Respondents who found Vignette to be Typical: 94%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: None

Description of Intra-Service Work: Paraffin is removed, and high quality DNA is isolated from the patient's tumor tissue. DNA is subjected to PCR amplification for exon 15 of the BRAF gene. The PCR products undergo bidirectional dideoxynucleotide chain termination sequencing on a capillary electrophoresis instrument. The pathologist evaluates the electropherograms to identify nucleotide sequence variants. The pathologist composes a report which specifies the patient's mutation status. The report is edited, signed and the results are communicated to appropriate caregivers.

Description of Post-Service Work: None

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert panel reviewed the survey data from 66 pathologists and compared it to the key reference code 88291 (Work RVU = 0.52, 20 minutes). The survey respondents indicated code 81210 is slightly less intense

and complex as 88291, although the median Work RVU = 0.52. The expert panel agreed that the median physician time of 15 minutes is typical and compared to the key reference service, the 25<sup>th</sup> percentile work RVU of 0.37 appropriately values new CPT code 81210 within this family of services.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The molecular stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pathology                      How often? Rarely

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 7,000

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate.

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 88182

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 81225      Tracking Number Z2      Original Specialty Recommended RVU: **0.37**  
 Presented Recommended RVU: **0.37**  
 Global Period: XXX      RUC Recommended RVU: **0.37**

CPT Descriptor: CYP2C19 (cytochrome P450, family 2, subfamily C, polypeptide 19) (eg, drug metabolism), gene analysis, common variants (eg, \*2, \*3, \*4, \*8, \*17)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 60 year-old Caucasian man is seen by a cardiologist after experiencing an acute myocardial infarct. The physician is considering percutaneous coronary intervention for this patient and needs to place the patient on an anti-platelet drug (clopidogrel) to prevent clotting. To determine whether the standard 300 mg loading dose of clopidogrel should be altered, a sample of anticoagulated peripheral blood is submitted to the laboratory to test for common variants in the CYP2C19 gene.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: None

Description of Intra-Service Work: High quality genomic DNA is isolated and subjected to two amplification reactions (PCR). Pooled PCR amplicons are enzymatically fragmented, labeled with biotin, and hybridized to a microarray containing oligonucleotide probes. After staining with a streptavidin-conjugated fluorescent dye, the array is scanned to detect signal from the hybridized DNA fragments. The pathologist evaluates the allelic ratios and data supporting the recommended identification of specific CYP2C19 variants. The pathologist composes a report which specifies the patient's CYP2C19 allele status. The report is edited, signed and the results are communicated to appropriate caregivers.

Description of Post-Service Work: None

CPT Descriptor Immunolectrophoresis; serum**KEY MPC COMPARISON CODES:**

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

|                                                                                                                         |               |                 |                    |                                         |

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert panel reviewed the survey data from pathologists who perform the service and compared it to the key reference code 886320 (Work RVU = 0.37, 17 minutes). The survey respondents indicated code 81225 is

more intense and complex than 86320 with a median Work RVU = 0.50. The expert panel agreed that the median physician time of 13 minutes is typical and compared to the key reference service, the 25<sup>th</sup> percentile work RVU of 0.37 appropriately values new CPT code 81225 within this family of services.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The molecular stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pathology                      How often? Rarely

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

|           |           |            |   |

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 88182

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 81226      Tracking Number   Z3      Original Specialty Recommended RVU: **0.43**  
 Presented Recommended RVU: **0.43**  
 Global Period: XXX      RUC Recommended RVU: **0.43**

CPT Descriptor: CYP2D6 (cytochrome P450, family 2, subfamily D, polypeptide 6) (eg, drug metabolism), gene analysis, common variants (eg, \*2, \*3, \*4, \*5, \*6, \*9, \*10, \*17, \*19, \*29, \*35, \*41, \*1XN, \*2XN, \*4XN)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A pre-menopausal 47-year-old woman is seen by an oncologist for breast cancer. Her tumor was positive for estrogen and progesterone receptors. The oncologist is considering treatment with tamoxifen rather than an aromatase inhibitor. To aid in this decision, the oncologist desires to predict the patient's ability to metabolize tamoxifen to the more active drug, endoxifen. A sample of anticoagulated peripheral blood is submitted to the laboratory to test for common variants in the CYP2D6 gene.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: None

Description of Intra-Service Work: High quality genomic DNA is isolated and subjected to two amplification reactions (PCR). Pooled PCR amplicons are enzymatically fragmented, labeled with biotin, and hybridized to a microarray containing oligonucleotide probes. After staining with a streptavidin-conjugated fluorescent dye, the array is scanned to detect signal from the hybridized DNA fragments. The pathologist evaluates the allelic ratios and data supporting the recommended identification of specific CYP2D6 variants. The pathologist composes a report which specifies the patient's CYP2D6 allele status. The report is edited, signed and the results are communicated to appropriate caregivers.

Description of Post-Service Work: None

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert panel reviewed the survey data from pathologists who perform the service and compared it to the key reference code 88291 (Work RVU = 0.52, 20 minutes). The survey respondents indicated code 81226 is more intense and complex than 88291, although the median Work RVU = 0.50. The expert panel agreed that the median physician time of 15 minutes is typical and compared to the key reference service, the 25<sup>th</sup> percentile work RVU of 0.43 appropriately values new CPT code 81226 within this family of services.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The molecular stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pathology                      How often? Rarely

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|
|-----------|-----------|------------|---|

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
| Specialty | Frequency | Percentage | % |

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 2,000  
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate.

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
| Specialty | Frequency | Percentage | % |
| Specialty | Frequency | Percentage | % |

Do many physicians perform this service across the United States?

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 88182

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

|                    |                    |                                                 |
|--------------------|--------------------|-------------------------------------------------|
| CPT Code: 81227    | Tracking Number Z4 | Original Specialty Recommended RVU: <b>0.38</b> |
|                    |                    | Presented Recommended RVU: <b>0.38</b>          |
| Global Period: XXX |                    | RUC Recommended RVU: <b>0.38</b>                |

CPT Descriptor: CYP2C9 (cytochrome P450, family 2, subfamily C, polypeptide 9) (eg, drug metabolism), gene analysis, common variants (eg, \*2, \*3, \*5, \*6)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 60-year-old man presents to his physician with complaints of fatigue, lightheadedness, and palpitations. Diagnostic workup revealed atrial fibrillation, for which the physician would like to prescribe warfarin. In order to facilitate rapid achievement of the proper dose, she orders warfarin sensitivity genotyping for common variants of the CYP2C9 gene, which have been shown to significantly influence the dose of warfarin needed to achieve appropriate therapeutic levels. A sample of peripheral blood is submitted to the laboratory for genotypic analysis of the CYP2C9 gene.

Percentage of Survey Respondents who found Vignette to be Typical: 92%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: None

Description of Intra-Service Work: High quality genomic DNA is isolated and subjected to a multiplexed PCR reaction, using primers specific for the most common variants, CYP2C9(\*2) and CYP2C9(\*3). The amplified target DNA is hybridized to a ferrocene signal probe and to an allele-specific capture probe, which is immobilized on an oligoarray. The captured target DNA generates a specific electrochemical signal that identifies the target DNA sequence. The pathologist examines the data and analytic system controls, and determines whether CYP2C9 variants are present in the patient's sample. The pathologist composes a report which specifies the patient's genotype. The report is edited, signed and the results are communicated to appropriate caregivers.

Description of Post-Service Work: None

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert panel reviewed the survey data from pathologists who perform the service and compared it to the key reference code 86320 (Work RVU = 0.37, 17 minutes). The survey respondents indicated code 81227 is more intense and complex as 86320 and the median Work RVU = 0.50. The expert panel agreed that the median physician time of 14 minutes is typical and compared to the key reference service, the 25<sup>th</sup> percentile work RVU of 0.38 appropriately values new CPT code 81227 within this family of services.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The molecular stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pathology                      How often? Rarely

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
| Specialty | Frequency | Percentage | % |
| Specialty | Frequency | Percentage | % |

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 4,000  
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. `

|           |           |            |   |
|-----------|-----------|------------|---|

| Specialty | Frequency | Percentage | % |
| Specialty | Frequency | Percentage | % |

Do many physicians perform this service across the United States?

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 88182

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 81245      Tracking Number Z6      Original Specialty Recommended RVU: **0.37**  
 Presented Recommended RVU: **0.37**  
 Global Period: XXX      RUC Recommended RVU: **0.37**

CPT Descriptor: FLT3 (fms-related tyrosine kinase 3) (eg, acute myeloid leukemia), gene analysis, internal tandem duplication (ITD) variants (ie, exons 14, 15)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 55 year old man presents to his primary care physician complaining of fatigue, dyspnea on exertion, and easy bruising. The patient's hemogram demonstrates leukocytosis with 30% blasts, anemia and thrombocytopenia. The peripheral blood smear shows decreased platelets and red blood cells along with large blasts with prominent nucleoli and Auer rods. The bone marrow contains 80% blasts which demonstrate an aberrant immunophenotype (CD33/CD13-positive with some cells expressing CD34 and CD117). The karyotype of the malignant cells is normal. An anticoagulated bone marrow specimen is submitted to the laboratory for FLT3 internal tandem duplication (ITD) mutation analysis.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: None

Description of Intra-Service Work: High quality genomic DNA is isolated from the bone marrow sample and subjected to a single PCR amplification encompassing the region which normally contains FLT3 internal tandem duplications. The fluorescent PCR products are separated by capillary electrophoresis. The pathologist evaluates the electropherogram comparing the relative sizes of the PCR product(s) to a control peak to determine FLT3/ITD mutation status. The pathologist composes a report which specifies the FLT3 ITD mutation status of the patient's leukemic cells. The report is edited, signed and the results are communicated to appropriate caregivers.

Description of Post-Service Work: None

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert panel reviewed the survey data from 44 pathologists who perform the service and compared it to the key reference code 88291 (Work RVU = 0.52, 20 minutes). The survey respondents indicated code 81245 is less intense and

complex as 88291, and the Work RVU = 0.45. The expert panel agreed that the median physician time of 15 minutes is typical and compared to the key reference service, the 25<sup>th</sup> percentile work RVU of 0.37 appropriately values new CPT code 81245 within this family of services.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The molecular stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pathology                      How often? Rarely

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|

Do many physicians perform this service across the United States?

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 88182

## AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS SUMMARY OF RECOMMENDATION

|                    |                    |                                                 |
|--------------------|--------------------|-------------------------------------------------|
| CPT Code: 81257    | Tracking Number Z7 | Original Specialty Recommended RVU: <b>0.50</b> |
|                    |                    | Presented Recommended RVU: <b>0.50</b>          |
| Global Period: XXX |                    | RUC Recommended RVU: <b>0.50</b>                |

CPT Descriptor: HBA1/HBA2 (alpha globin 1 and alpha globin 2) (eg, alpha thalassemia, Hb Bart's hydrops fetalis syndrome, HbH disease), gene analysis; for common deletions or variant (eg, Southeast Asian, Thai, Filipino, Mediterranean, alpha3.7, alpha4.2, alpha20.5, and Constant Spring)

### CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 26-year-old G1P0 woman of Vietnamese descent presents to her obstetrician for a first prenatal visit after missing a menstrual cycle and obtaining a positive home pregnancy test result. Both the patient and her partner have been identified as alpha thalassemia carriers by hemoglobin electrophoresis. An anticoagulated peripheral blood sample is submitted to the laboratory for testing to identify the specific type of alpha thalassemia mutation the patient carries.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

### Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

### Moderate Sedation

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: None

Description of Intra-Service Work: High quality genomic DNA is isolated from whole blood and subjected to multiplex PCR amplification utilizing primers for 7 commonly occurring alpha thalassemia deletions. The PCR products, a molecular weight marker, and an allelic ladder are separated by gel electrophoresis. The pathologist evaluates the patterns of the PCR products on the gel in order to identify the patient's specific deletion. The pathologist composes a report specifying the patient's mutation status and the respective chromosomal locations (eg cis, trans). The report is edited, signed and the results are communicated to appropriate caregivers.

Description of Post-Service Work: None

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert panel reviewed the survey results and agreed that the number of survey respondents was extremely low and that conclusions could not be drawn from the data. The expert panel assimilated the overall physician work of 81257 with that of new tier 2 service 81402 *Molecular pathology procedure, Level 3 (eg, >10 SNPs, 2-10 methylated variants, or 2-10 somatic variants [typically using non-sequencing target variant analysis], immunoglobulin and T-cell receptor gene rearrangements, duplication/deletion variants 1 exon)* (Recommended Work RVU = 0.50, 20 minutes). CAP recommends a direct crosswalk of 81257 to the physician work and time of CPT code 81402, based on work described in the CPT descriptors. A physician Work RVU of 0.50 also represents the 25<sup>th</sup> percentile of the survey respondents.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The molecular stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pathology                      How often? Rarely

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|
|-----------|-----------|------------|---|

| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|
|-----------|-----------|------------|---|

| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|
|-----------|-----------|------------|---|

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 5,000  
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate.

| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|
|-----------|-----------|------------|---|

| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|
|-----------|-----------|------------|---|

| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|
|-----------|-----------|------------|---|

Do many physicians perform this service across the United States?

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 88182

CPT Descriptor: IGH@ (Immunoglobulin heavy chain locus) (eg, leukemias and lymphomas) gene rearrangement analysis to detect abnormal clonal population(s); amplification methodology (eg, polymerase chain reaction)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: An enlarged supraclavicular lymph node is identified during physical examination of 62-year-old man at a routine physician visit. A biopsy of the supraclavicular node is taken; initial morphologic and immunologic studies demonstrate a B-cell population that is suspicious for malignancy. A lymph node sample is submitted for immunoglobulin heavy chain gene rearrangement analysis for further evidence of a clonal B-lymphoid population.

Percentage of Survey Respondents who found Vignette to be Typical: 98%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: None

Description of Intra-Service Work: High quality genomic DNA is isolated from the lymph node sample and subjected to five multiplex PCR amplification reactions using fluorescently-tagged primers directed at various framework, diversity and joining regions of the immunoglobulin heavy chain gene. Following amplification, the reaction products from each tube are separately subjected to capillary electrophoresis. The pathologist evaluates the electrophoretic tracings for one or two predominant fragments of discrete size against background polyclonal or oligoclonal peaks for evidence of clonality. The pathologist composes a report which specifies the clonality status of the B-cell population in the patient sample. The report is edited, signed and the results are communicated to appropriate caregivers.

Description of Post-Service Work: None

| Post-Service intensity/complexity  |      |      |

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUR analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert panel reviewed the survey data and compared it to the key reference code 88291 (Work RVU = 0.52, 20 minutes). All intensity and complexity measures indicated a high intensity and complexity. The expert panel agreed that the median physician time of 21 minutes is typical and compared to the key reference service, the 25<sup>th</sup> percentile work RVU of 0.52 appropriately values 81261 within this family of services.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions:

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The molecular stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pathology                      How often? Rarely

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

CPT Descriptor: IGH@ (Immunoglobulin heavy chain locus) (eg, leukemias and lymphomas) gene rearrangement analysis to detect abnormal clonal population(s); direct probe methodology (eg, Southern blot)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: An enlarged inguinal lymph node and splenomegaly was found on physical examination of a 54-year-old white man who visited his internist complaining of increasing abdominal discomfort. The enlarged inguinal lymph node is excised and initial morphologic and immunologic studies demonstrate a B-cell population that is suspicious for malignancy. A lymph node sample retained frozen is submitted for Immunoglobulin heavy chain gene rearrangement Southern blot analysis.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: None

Description of Intra-Service Work: A large quantity of high quality genomic DNA is isolated from the lymph node sample, and gel electrophoresis is performed to assess integrity of the extracted DNA. The DNA undergoes digestion with the 3 restriction enzymes. The genomic fragments are separated by gel electrophoresis, transferred to a nylon membrane by capillary action, and hybridized to radiolabeled probes directed toward sequences in the immunoglobulin heavy chain joining region. The pathologist evaluates the autoradiographically generated hybridization patterns of the digestion fragments in relation to marker and control lanes for evidence of clonal rearrangements or polymorphisms. The pathologist composes a report specifying the clonality status of the B-cell population. The report is edited, signed and the results are communicated to appropriate caregivers.

Description of Post-Service Work: None

| Post-Service intensity/complexity  |      |      |

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert committee reviewed the survey data and compared it to the key reference code 88182 (Work RVU = 0.77, 20 minutes). All intensity and complexity measures indicated a high intensity and complexity. The expert panel agreed that the median physician time of 20 minutes is typical and compared to the key reference service, the 25<sup>th</sup> percentile work RVU of 0.61 appropriately values 81262 within this family of services.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The molecular stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pathology                      How often? Rarely

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 700

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate.

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
| Specialty | Frequency | Percentage | % |
| Specialty | Frequency | Percentage | % |

Do many physicians perform this service across the United States?

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 88182

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 81263      Tracking Number    Z10

Original Specialty Recommended RVU: **0.74**Presented Recommended RVU: **0.52**

Global Period: XXX

RUC Recommended RVU: **0.52**

CPT Descriptor: IGH@ (Immunoglobulin heavy chain locus) (eg, leukemia and lymphoma)  
variable region somatic mutation analysis

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 60-year-old man presents to his primary care physician complaining of recent fatigue, early satiety, and a 5 – 10 lb. weight loss. The patient has generalized lymphadenopathy and a palpable spleen tip. The complete blood count demonstrates lymphocytosis with anemia and thrombocytopenia. The peripheral blood smear shows an excess of small lymphocytes, occasional prolymphocytes, and smudge cells. Flow cytometry confirms a diagnosis of chronic lymphocytic leukemia. A blood specimen is submitted for IgVH sequencing to assess for somatic hypermutation in the leukemic cells.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is;  
Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an  
E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: None

Description of Intra-Service Work: High quality genomic DNA is isolated from whole blood and subjected to two multiplex PCR reactions utilizing primers directed at the leader, framework 1 and junctional regions of the immunoglobulin heavy chain gene. PCR products are separated by gel electrophoresis. After purification, clonal PCR products are subjected to dideoxynucleotide sequencing. The pathologist evaluates the degree of divergence from an appropriately selected reference sequence in order to determine somatic hypermutation status. The pathologist composes a report which specifies the patient's IvGH mutation status. The report is edited, signed, and the results are communicated to appropriate caregivers.

Description of Post-Service Work: None

| Intra-Service intensity/complexity | 4.00 | 3.75 |
| Post-Service intensity/complexity  |      |      |

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert committee reviewed the survey data and compared it to the key reference code 88182 (Work RVU = 0.77, 20 minutes). All intensity and complexity measures indicated a high intensity and complexity. The committee also distinguished this service as a unique complex mutation analysis unlike others. The expert panel agreed that the median physician time of 23 minutes is typical and compared to the key reference service, and the median work RVU of 0.74 appropriately values 81263 within this family of services.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The molecular stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pathology                      How often? Rarely

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

Do many physicians perform this service across the United States?

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 88182

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 81264      Tracking Number   Z11

Original Specialty Recommended RVU: **0.75**Presented Recommended RVU: **0.58**

Global Period: XXX

RUC Recommended RVU: **0.58**

CPT Descriptor: IGK@ (Immunoglobulin kappa light chain locus) (eg, leukemia and lymphoma, B-cell), gene rearrangement analysis, evaluation to detect abnormal clonal population(s)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: An enlarged supraclavicular lymph node is identified during physical examination of 62-year-old male patient at a routine physician visit. A biopsy of the enlarged node is taken and initial morphologic and immunologic studies demonstrate a B-cell population that is suspicious for malignancy. A lymph node sample is submitted for immunoglobulin kappa light chain gene rearrangement analysis for further evidence of a clonal B-lymphoid population.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: None

Description of Intra-Service Work: High quality genomic DNA is isolated from the lymph node sample and subjected to two multiplex PCR amplification reactions using fluorescently-tagged primers directed at various framework, intronic, joining and kappa-deletion regions of the immunoglobulin kappa light chain gene. Following amplification, the reaction products from each tube are separately subjected to capillary electrophoresis. The pathologist evaluates the electrophoretic tracings for one or two predominant fragments of discrete size against background polyclonal or oligoclonal peaks for evidence of clonality. The pathologist composes a report which specifies the rearrangement and clonality status of the B-cell population in the patient sample. The report is edited, signed and the results are communicated to appropriate caregivers.

Description of Post-Service Work: None

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert committee reviewed the survey data and compared it to the key reference code 88182 (Work RVU = 0.77, 20 minutes). The committee agreed that this service is similar to 81261 however it is a more complex service. In addition, the survey respondents assimilated the work to that of 88182. The expert panel agreed that the median physician time of 22 minutes is typical and compared to the key reference service, and the median work RVU of 0.75 appropriately values 81264 within this family of services.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The molecular stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pathology                      How often? Rarely

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

Do many physicians perform this service across the United States?

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 88182

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 81265      Tracking Number    Z12

Original Specialty Recommended RVU: **0.40**Presented Recommended RVU: **0.40**

Global Period: XXX

RUC Recommended RVU: **0.40**

CPT Descriptor: Comparative analysis using Short Tandem Repeat (STR) markers; patient and comparative specimen (eg, pre-transplant recipient and donor germline testing, post-transplant non-hematopoietic recipient germline [eg, buccal swab or other germline tissue sample] and donor testing, twin zygosity testing, or maternal cell contamination of fetal cells)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 55-year-old man presents to his physician complaining of fatigue, dyspnea on exertion, and easy bruising. The patient's complete blood count, peripheral blood smear, flow cytometry analysis, and bone marrow examination support a diagnosis of acute myeloid leukemia. Normal cytogenetic findings and the presence of a FLT3 internal tandem duplication mutation place him at high risk for relapse following initial treatment. The patient achieves remission with induction chemotherapy, and he is referred for peripheral blood stem cell transplantation. A matched related donor is found. Stem cells are collected from the donor, and blood specimens from the patient and the donor are submitted for pre-transplant testing to identify informative short tandem repeat (STR) markers for post-transplant chimerism testing.

Percentage of Survey Respondents who found Vignette to be Typical: 92%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: None

Description of Intra-Service Work: High quality genomic DNA is isolated from the recipient and donor whole blood samples. The individual DNA isolates are each subjected to a single multiplex PCR amplification reaction that utilizes a combination of 16 primer sets directed toward 15 polymorphic STRs and the gender marker amelogenin. The donor and recipient fluorescent PCR products are separated by capillary electrophoresis. The pathologist compares the relative sizes of the PCR products from the respective electropherograms, and identifies informative alleles that can be used for post-transplant engraftment monitoring. The pathologist composes a report specifying the informative STRs for future chimerism testing. The report is edited, signed and the results are communicated to appropriate caregivers.

Description of Post-Service Work: None

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert committee reviewed the survey data and compared it to the key reference code 86320 (Work RVU = 0.37, 17 minutes). This service involves the analysis of more than one specimen and the expert panel agreed that the median physician time of 17 minutes is typical and compared to the key reference service, and the 25<sup>th</sup> percentile work RVU of 0.40 appropriately values 81265 within this family of services.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☒ Other reason (please explain) 81265 may be billed with add on code 81265. It may be also billed at or around the time as any HLA typing codes are billed.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The molecular stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pathology                      How often? Rarely

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 88291

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 81266      Tracking Number   Z13

Original Specialty Recommended RVU: **0.41**Presented Recommended RVU: **0.41**

Global Period: XXX

RUC Recommended RVU: **0.41**

CPT Descriptor: Comparative analysis using Short Tandem Repeat (STR) markers; each additional specimen (eg, additional cord blood donor, additional fetal samples from different cultures, or additional zygoty in multiple birth pregnancies) (List separately in addition to code for primary procedure)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 55-year-old man presents to his physician complaining of fatigue, dyspnea on exertion, and easy bruising. The patient's complete blood count, peripheral blood smear, flow cytometry analysis, and bone marrow examination support a diagnosis of acute myeloid leukemia. Normal cytogenetic findings and the presence of a FLT3 internal tandem duplication mutation place him at high risk for relapse following initial treatment. The patient achieves remission with induction chemotherapy, and he is referred for peripheral blood stem cell transplantation. Because a matched donor cannot be identified, the patient will undergo a double cord blood transplant. A blood specimen from the patient and samples of each donor cord blood are submitted for pre-transplant testing to identify informative short tandem repeat (STR) markers for post-transplant chimerism testing.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: None

Description of Intra-Service Work: High quality genomic DNA is isolated from the recipient whole blood and both cord blood samples. The individual DNA isolates are each subjected to a single multiplex PCR amplification reaction that utilizes a combination of 16 primer sets directed toward 15 polymorphic STRs and the gender marker amelogenin. The fluorescent PCR products from the donors and recipient are separated by capillary electrophoresis. The pathologist compares the relative sizes of the PCR products from the respective electropherograms, and identifies informative alleles that can be used for post-transplant engraftment monitoring. The pathologist composes a report which specifies the informative STRs for future chimerism testing. The report is edited, signed and the results are communicated to appropriate caregivers.

Description of Post-Service Work: None

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert panel reviewed the survey data and compared it to the key reference code 86320 (Work RVU = 0.37, 17 minutes). The committee agreed that the work of 81266 more intense than 86320. In addition, the survey respondents assimilated the work to that of 88182. The expert panel agreed that the median physician time of 22 minutes is typical and compared to the key reference service, and the 25<sup>th</sup> percentile work RVU of 0.41 appropriately values 81266 within this family of services.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☒ Other reason (please explain) 81266 is an add on code and it may be billed at or around the same time as a HLA typing code.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed)

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty                      How often?

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 88291

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 81267      Tracking Number   Z14

Original Specialty Recommended RVU: **0.52**Presented Recommended RVU: **0.45**

Global Period: XXX

RUC Recommended RVU: **0.45**

CPT Descriptor: Chimerism (engraftment) analysis, post hematopoietic stem cell transplantation specimen, includes comparison to previously performed baseline analyses; without cell selection

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 55-year-old man who presents with normal karyotype acute myeloid leukemia (AML) undergoes a peripheral blood stem cell transplant after achieving remission with cytarabine and anthracycline chemotherapy. Thirty days post-transplant a blood specimen from the patient is submitted for engraftment (chimerism) testing.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: None

Description of Intra-Service Work: High quality genomic DNA is isolated and subjected to a single multiplex PCR amplification reaction that utilizes a combination of 16 primer sets directed toward 15 polymorphic STRs and the gender marker amelogenin. The fluorescent PCR products are separated by capillary electrophoresis. The pathologist compares electropherogram to the pretransplant recipient and donor electropherograms, and analyzes the informative alleles for the relative proportions of donor and recipient DNA. The pathologist composes a report that states the percentages of donor and recipient alleles present. The report is edited, signed and the results are communicated to appropriate caregivers.

Description of Post-Service Work: None

**SURVEY DATA**

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUR analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert committee reviewed the survey data and compared it to the key reference code 88291 (Work RVU = 0.52, 20 minutes). The committee agreed that the work of 81267 more intense than 88291. In addition, 81267 is similar to 81265 (Work RVU recommended = 0.40, 17 minutes) but is much more work as it involves an intense and complex comparison of analyses. The expert panel agreed that the median physician time of 18 minutes is typical and compared to the key reference service, and the median work RVU of 0.52 appropriately values 81267 within this family of services.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The molecular stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pathology                      How often? Rarely

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

|           |           |            |   |

Do many physicians perform this service across the United States?

### Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 88182

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 81268      Tracking Number    Z15

Original Specialty Recommended RVU: **0.75**Presented Recommended RVU: **0.51**

Global Period: XXX

RUC Recommended RVU: **0.51**

CPT Descriptor: Chimerism (engraftment) analysis, post hematopoietic stem cell transplantation specimen, includes comparison to previously performed baseline analyses; with cell selection (eg, CD3, CD33), each cell type (If comparative STR analysis of recipient [using buccal swab or other germline tissue sample] and donor are performed after hematopoietic stem cell transplantation, report IXXX6-IXXX7 in conjunction with IXXX8-IXXX9 for chimerism testing)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 55-year-old man who presents with normal karyotype acute myeloid leukemia (AML) undergoes a peripheral blood stem cell transplant after achieving remission with cytarabine and anthracycline chemotherapy. Thirty days post-transplant a blood specimen from the patient is submitted for engraftment (chimerism) testing.

Percentage of Survey Respondents who found Vignette to be Typical: 96%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: None

Description of Intra-Service Work: CD3-positive and CD33-positive cells are isolated using fluorescent antibody-based flow cytometry. High quality genomic DNA is isolated from each of these cellular fractions and subjected to a single multiplex PCR amplification reaction that utilizes a combination of 16 primer sets directed toward 15 polymorphic STRs and the gender marker amelogenin. The fluorescent PCR products are separated by capillary electrophoresis. The pathologist compares the electropherograms to the pretransplant recipient and donor electropherograms, and analyzes the informative alleles for the relative proportions of donor and recipient DNA for each cellular component. The pathologist composes a report that states the percentages of donor and recipient alleles present for each cellular component. The report is edited, signed and the results are communicated to appropriate caregivers.

Description of Post-Service Work: None

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert committee reviewed the survey data and compared it to the key reference code 88291 (Work RVU = 0.52, 20 minutes). The committee agreed that the work of 81268 more intense than 88291 and more work. 81268 involves more work than 81267 whereas individual cell sorting is performed and compared to baseline analyses. The survey respondents agreed that the physician work was greater than the reference code and that of 81267. The intensity and complexity indicators agree there is more work as well. The expert panel agreed that the median physician time of 20 minutes is typical and compared to the key reference service, and the median work RVU of 0.75 appropriately values 81268 within this family of services.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The molecular stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pathology                      How often? Rarely

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
| Specialty | Frequency | Percentage | % |
| Specialty | Frequency | Percentage | % |

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 300  
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate.

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
| Specialty | Frequency | Percentage | % |
| Specialty | Frequency | Percentage | % |

Do many physicians perform this service across the United States?

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 88182

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 81292      Tracking Number   Z16

Original Specialty Recommended RVU: **1.40**Presented Recommended RVU: **1.40**

Global Period: XXX

RUC Recommended RVU: **1.40**

CPT Descriptor: MLH1 (mutL homolog 1, colon cancer, nonpolyposis type 2) (eg, hereditary non-polyposis colorectal cancer, Lynch syndrome) gene analysis; full sequence analysis

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 45-year-old male patient presents with fatigue and weight loss. On physical examination, occult blood is discovered in the stool. The patient's family history is positive for colon cancer in several relatives. The patient undergoes a right hemicolectomy after a large, poorly differentiated adenocarcinoma with lymphocytic infiltration is found in the right colon. Microsatellite instability testing performed on the tumor demonstrates high level instability (MSI-H). Immunohistochemical staining reveals a loss of MLH1 protein expression. Mutation testing of the tumor for the BRAF V600E mutation and MLH1 hypermethylation are negative. An anticoagulated peripheral blood sample is submitted for MLH1 gene sequencing to assess the patient for the presence of an HNPCC-related mutation.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: None

Description of Intra-Service Work: High quality genomic DNA is isolated from whole blood and subjected to 19 individual PCR amplification reactions whose products encompass the entire coding sequence, exon-intron boundaries and portions of 5' and 3'-untranslated regions of the MLH1 gene. The PCR products from each reaction undergo bidirectional dideoxynucleotide chain termination sequencing using a capillary electrophoresis instrument. The pathologist evaluates the sequencing electropherograms for potential nucleotide sequence variants, insertions, deletions or other changes. The pathologist compares this evaluation with possible variants suggested by computer software to ensure that all abnormalities are identified. The pathologist composes a report which specifies the patient's mutation status to include information from a database and literature search regarding the significance of variants identified. The report is edited, signed and the results are communicated to appropriate caregivers.

Description of Post-Service Work: None

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert panel reviewed the survey results and agreed that the number of survey respondents was extremely low and that conclusions could not be drawn from the data. The expert panel assimilated the overall physician work of 81292 with that of new tier 2 service 81406 *Molecular pathology procedure, Level 7 (eg, analysis of 11-25 exons by DNA sequence analysis, mutation scanning or duplication/deletion variants of 26-50 exons, cytogenomic array analysis for neoplasia)* (Recommended Work RVU = 1.40, 60 minutes). CAP recommends a direct crosswalk of 81292 to the physician work and time of CPT code 81406, based on work described in the CPT descriptors.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The molecular stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pathology                      How often? Rarely

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
| Specialty | Frequency | Percentage | % |
| Specialty | Frequency | Percentage | % |

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 800  
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate.

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
| Specialty | Frequency | Percentage | % |
| Specialty | Frequency | Percentage | % |

Do many physicians perform this service across the United States?

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 88182

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 81293      Tracking Number   Z17

Original Specialty Recommended RVU: **0.52**Presented Recommended RVU: **0.52**

Global Period: XXX

RUC Recommended RVU: **0.52**

CPT Descriptor: MLH1 (mutL homolog 1, colon cancer, nonpolyposis type 2) (eg, hereditary non-polyposis colorectal cancer, Lynch syndrome) gene analysis; known familial variants

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 40-year-old asymptomatic woman whose 45-year-old brother was recently diagnosed with colon cancer and Lynch Syndrome presents to her physician for genetic testing. The brother has a disease-associated mutation in the MLH1 gene. An anticoagulated peripheral blood sample from the asymptomatic woman is submitted for testing for this known familial mutation.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: None

Description of Intra-Service Work: High quality genomic DNA is isolated from whole blood and subjected to PCR amplification for the respective MLH1 exon that contains the known familial mutation. The PCR products undergo bidirectional dideoxynucleotide chain termination sequencing using a capillary electrophoresis instrument. The pathologist evaluates the sequencing electropherograms for the known familial mutation and any other variants that may be present. The pathologist composes a report which specifies the patient's mutation status. The report is edited, signed and the results are communicated to appropriate caregivers.

Description of Post-Service Work: None

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert panel reviewed the survey results and agreed that the number of survey respondents was extremely low and that conclusions could not be drawn from the data. The expert panel assimilated the overall physician work of 81293 with that of new tier 2 service 81403 *Molecular pathology procedure, Level 4 (eg, analysis of single exon by DNA sequence analysis, analysis of >10 amplicons using multiplex PCR in 2 or more independent reactions, mutation scanning or duplication/deletion variants of 2-5 exons)* (Recommended Work RVU = 0.52, 28 minutes). CAP recommends a direct crosswalk of 81293 to the physician work and time of CPT code 81403, based on work described in the CPT descriptors.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The molecular stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pathology                      How often? Rarely

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

|           |           |            |   |

|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|

Do many physicians perform this service across the United States?

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 88182

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 81294      Tracking Number   Z18

Original Specialty Recommended RVU: **0.80**Presented Recommended RVU: **0.80**

Global Period: XXX

RUC Recommended RVU: **0.80**

CPT Descriptor: MLH1 (mutL homolog 1, colon cancer, nonpolyposis type 2) (eg, hereditary non-polyposis colorectal cancer, Lynch syndrome) gene analysis; duplication/deletion variants

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 40-year-old man with a family history of colon cancer undergoes a right hemicolectomy to remove a poorly differentiated colonic adenocarcinoma with lymphocytic infiltration. The tumor demonstrates high level microsatellite instability (MSI-H). Immunohistochemistry staining reveals a loss of MLH1 protein expression. Mutation testing on the tumor for the BRAF V600E mutation and MLH1 hypermethylation are negative. Prior MLH1 sequencing performed to assess the patient for the presence of an HNPCC-related mutation was negative. Deletion/duplication analysis of the MLH1 gene is performed.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: None

Description of Intra-Service Work: High quality genomic DNA previously isolated from whole blood is subjected to multiplex ligation probe ligation analysis (MLPA), which involves hybridization and ligation of multiple pairs of oligonucleotide probes specific for the 19 exons of the MLH1 gene to assess dosage of each exon. The pathologist examines peak heights and calculated ratios of individual exons to control gene sequences to determine dosage status for all exons tested in the MLH1 gene. The pathologist composes a report which specifies the patient's mutation status. The report is edited, signed and the results are communicated to appropriate caregivers.

Description of Post-Service Work: None

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert panel reviewed the survey results and agreed that the number of survey respondents was extremely low and that conclusions could not be drawn from the data. The expert panel assimilated the overall physician work of 81294 with that of new tier 2 service 81405 *Molecular pathology procedure, Level 5 (eg, analysis of 2-5 exons by DNA sequence analysis, mutation scanning or duplication/deletion variants of 6-10 exons, or characterization of a dynamic mutation disorder/triplet repeat by Southern blot analysis)* (Recommended Work RVU = 0.80, 30 minutes). CAP recommends a direct crosswalk of 81294 to the physician work and time of CPT code 81405, based on work described in the CPT descriptors.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The molecular stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pathology                      How often? Rarely

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 800  
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate.

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|

| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|

Do many physicians perform this service across the United States?

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 88182

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 81295      Tracking Number    Z19

Original Specialty Recommended RVU: **1.40**Presented Recommended RVU: **1.40**

Global Period: XXX

RUC Recommended RVU: **1.40**

CPT Descriptor: MSH2 (mutS homolog 2, colon cancer, nonpolyposis type 1) (eg, hereditary non-polyposis colorectal cancer, Lynch syndrome) gene analysis; full sequence analysis

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 45-year-old male patient presents with fatigue and weight loss. On physical examination, occult blood is discovered in the stool. The patient's family history is positive for colon cancer in several relatives. The patient undergoes a right hemicolectomy after a large, poorly differentiated adenocarcinoma with lymphocytic infiltration is found in the right colon. Microsatellite instability testing is performed on the tumor demonstrates high level instability (MSI-H). Immunohistochemical staining reveals a loss of MSH2 protein expression. An anticoagulated peripheral blood sample is submitted for MSH2 gene sequencing to assess the patient for the presence of an HNPCC-related mutation.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: None

Description of Intra-Service Work: High quality genomic DNA is isolated from whole blood and subjected to 16 individual PCR amplification reactions. The PCR products from each reaction undergo bidirectional dideoxynucleotide chain termination sequencing using a capillary electrophoresis instrument. The pathologist evaluates the sequencing electropherograms for potential nucleotide sequence variants, insertions, deletions or other changes. The pathologist compares this evaluation with possible variations suggested by computer software to ensure that all abnormalities are identified. The pathologist composes a report specifying the patient's mutation status to include information from a database and literature search regarding the significance of variants identified. The report is edited, signed and the results are communicated to appropriate caregivers.

Description of Post-Service Work: None

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert panel reviewed the survey results and agreed that the number of survey respondents was extremely low and that conclusions could not be drawn from the data. The expert panel assimilated the overall physician work of 81295 with that of new tier 2 service 81406 *Molecular pathology procedure, Level 7 (eg, analysis of 11-25 exons by DNA sequence analysis, mutation scanning or duplication/deletion variants of 26-50 exons, cytogenomic array analysis for neoplasia)* (Recommended Work RVU = 1.40, 60 minutes). CAP recommends a direct crosswalk of 81295 to the physician work and time of CPT code 81406, based on work described in the CPT descriptors.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The molecular stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pathology                      How often? Rarely

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 800  
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate.

|           |           |            |   |

| Specialty | Frequency | Percentage | % |

Do many physicians perform this service across the United States?

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 88182

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 81296      Tracking Number   Z20

Original Specialty Recommended RVU: **0.52**Presented Recommended RVU: **0.52**

Global Period: XXX

RUC Recommended RVU: **0.52**

CPT Descriptor: MSH2 (mutS homolog 2, colon cancer, nonpolyposis type 1) (eg, hereditary non-polyposis colorectal cancer, Lynch syndrome) gene analysis; known familial variants

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 40-year-old asymptomatic woman whose 45 year-old brother was recently diagnosed with colon cancer and Lynch Syndrome presents to her primary care physician for genetic testing. The brother has a disease-associated mutation in the MSH2 gene. An anticoagulated peripheral blood sample from the asymptomatic woman is submitted for testing for this known familial mutation.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: None

Description of Intra-Service Work: High quality genomic DNA is isolated from whole blood and subjected to PCR amplification for the respective MSH2 exon that contains the known familial mutation. The PCR products undergo bidirectional dideoxynucleotide chain termination sequencing using a capillary electrophoresis instrument. The pathologist evaluates the sequencing electropherograms for the known familial mutation and any other variants that may be present. The pathologist composes a report which specifies the patient's mutation status. The report is edited, signed and the results are communicated to appropriate caregivers.

Description of Post-Service Work: None

|-----------------------------------|--|--|

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert panel reviewed the survey results and agreed that the number of survey respondents was extremely low and that conclusions could not be drawn from the data. The expert panel assimilated the overall physician work of 81296 with that of new tier 2 service 81403 *Molecular pathology procedure, Level 4 (eg, analysis of single exon by DNA sequence analysis, analysis of >10 amplicons using multiplex PCR in 2 or more independent reactions, mutation scanning or duplication/deletion variants of 2-5 exons)* (Recommended Work RVU = 0.52, 28 minutes). CAP recommends a direct crosswalk of 81296 to the physician work and time of CPT code 81403, based on work described in the CPT descriptors.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The molecular stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pathology How often? Rarely

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 500  
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate.

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
| Specialty | Frequency | Percentage | % |
| Specialty | Frequency | Percentage | % |

Do many physicians perform this service across the United States?

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 88182

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 81297      Tracking Number   Z21

Original Specialty Recommended RVU: **0.80**Presented Recommended RVU: **0.80**

Global Period: XXX

RUC Recommended RVU: **0.80**

CPT Descriptor: MSH2 (mutS homolog 2, colon cancer, nonpolyposis type 1) (eg, hereditary non- polyposis colorectal cancer, Lynch syndrome) gene analysis; duplication/deletion variants

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 40-year-old man with a family history of colon cancer undergoes a right hemicolectomy to remove a poorly differentiated colonic adenocarcinoma with lymphocytic infiltration. The tumor demonstrates high level microsatellite instability (MSI-H). Immunohistochemistry staining reveals a loss of MSH2 protein expression. Prior MLH2 sequencing performed to assess the patient for the presence of an HNPCC-related mutation was negative. Deletion/duplication analysis of the MSH2 gene is performed.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: None

Description of Intra-Service Work: High quality genomic DNA previously isolated from whole blood is subjected to multiplex ligation probe ligation analysis (MLPA), which involves hybridization and ligation of multiple pairs of oligonucleotide probes specific for the 16 exons of the MSH2 gene to assess dosage of each exon. The pathologist examines peak heights and calculated ratios of individual exons to control gene sequences to determine dosage status for all exons tested in the MSH2 gene. The pathologist composes a report which specifies the patient's mutation status. The report is edited, signed and the results are communicated to appropriate caregivers.

Description of Post-Service Work: None

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert panel reviewed the survey results and agreed that the number of survey respondents was extremely low and that conclusions could not be drawn from the data. The expert panel assimilated the overall physician work of 81297 with that of new tier 2 service 81405 *Molecular pathology procedure, Level 5 (eg, analysis of 2-5 exons by DNA sequence analysis, mutation scanning or duplication/deletion variants of 6-10 exons, or characterization of a dynamic mutation disorder/triplet repeat by Southern blot analysis)* (Recommended Work RVU = 0.80, 30 minutes). CAP recommends a direct crosswalk of 81297 to the physician work and time of CPT code 81405, based on work described in the CPT descriptors.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The molecular stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pathology                      How often? Rarely

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|
|-----------|-----------|------------|---|

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 800  
 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate.

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|

Do many physicians perform this service across the United States?

### Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 88182

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 45-year-old male patient presents with fatigue and weight loss. On physical examination, occult blood is discovered in the stool. The patient's family history is positive for colon cancer in several relatives. The patient undergoes a right hemicolectomy after a large, poorly differentiated adenocarcinoma with lymphocytic infiltration is found in the right colon. Microsatellite instability testing is performed on the tumor demonstrates high level instability (MSI-H). Immunohistochemical staining reveals a loss of MSH6 protein expression. An anticoagulated peripheral blood sample is submitted for MSH6 gene sequencing to assess the patient for the presence of an HNPCC-related mutation.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: None

Description of Intra-Service Work: High quality genomic DNA is isolated from whole blood and subjected to 10 individual PCR amplification reactions whose products encompass the entire coding sequence, exon-intron boundaries and portions of 5' and 3'-untranslated regions of the MSH6 gene. The PCR products from each reaction undergo bidirectional dideoxynucleotide chain termination sequencing using a capillary electrophoresis instrument. The pathologist evaluates the sequencing electropherograms for potential nucleotide sequence variants, insertions, deletions or other changes. The pathologist compares this evaluation with possible variations suggested by computer software to ensure that all abnormalities are identified. The pathologist composes a report which specifies the patient's mutation status to include information from a database and literature search regarding the significance of variants identified. The report is edited, signed and the results are communicated to appropriate caregivers.

Description of Post-Service Work: None

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert panel reviewed the survey results and agreed that the number of survey respondents was extremely low and that conclusions could not be drawn from the data. The expert panel assimilated the overall physician work of 81298 with that of new tier 2 service 81405 *Molecular pathology procedure, Level 5 (eg, analysis of 2-5 exons by DNA sequence analysis, mutation scanning or duplication/deletion variants of 6-10 exons, or characterization of a dynamic mutation disorder/triplet repeat by Southern blot analysis)* (Recommended Work RVU = 0.80, 30 minutes). CAP recommends a direct crosswalk of 81298 to the physician work and time of CPT code 81405, based on work described in the CPT descriptors.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The molecular stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pathology                      How often? Rarely

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 88182

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 81299      Tracking Number   Z23

Original Specialty Recommended RVU: **0.52**Presented Recommended RVU: **0.52**

Global Period: XXX

RUC Recommended RVU: **0.52**

CPT Descriptor: MSH6 (mutS homolog 6 [E. coli]) (eg, hereditary non-polyposis colorectal cancer, Lynch syndrome) gene analysis; known familial variants

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 40-year-old asymptomatic woman whose 45-year-old brother was recently diagnosed with colon cancer and Lynch Syndrome presents to her primary care physician for genetic testing. The brother was found to have a disease-associated mutation in the MSH6 gene. An anticoagulated peripheral blood sample from the asymptomatic woman is submitted to test for an MSH6 gene known familial mutation.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: None

Description of Intra-Service Work: Upon receipt of the specimen, high quality genomic DNA is isolated from whole blood and subjected to PCR amplification for the respective MSH6 exon that contains the known familial mutation. The PCR products undergo bidirectional dideoxynucleotide chain termination sequencing using a capillary electrophoresis instrument. The pathologist evaluates the sequencing electropherograms for the known familial mutation and any other variants that may be present. The pathologist composes a report which specifies the patient's mutation status. The report is edited, signed and the results are communicated to appropriate caregivers.

Description of Post-Service Work: None

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert panel reviewed the survey results and agreed that the number of survey respondents was extremely low and that conclusions could not be drawn from the data. The expert panel assimilated the overall physician work of 81299 with that of new tier 2 service 81403 *Molecular pathology procedure, Level 4 (eg, analysis of single exon by DNA sequence analysis, analysis of >10 amplicons using multiplex PCR in 2 or more independent reactions, mutation scanning or duplication/deletion variants of 2-5 exons)* (Recommended Work RVU = 0.52, 28 minutes). CAP recommends a direct crosswalk of 81299 to the physician work and time of CPT code 81403, based on work described in the CPT descriptors.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The molecular stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pathology                      How often? Rarely

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|

|-----------|-----------|------------|---|

Do many physicians perform this service across the United States?

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 88182

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code:81300      Tracking Number   Z24

Original Specialty Recommended RVU: **0.65**Presented Recommended RVU: **0.65**

Global Period: XXX

RUC Recommended RVU: **0.65**

CPT Descriptor: MSH6 (mutS homolog 6 [E. coli]) (eg, hereditary non-polyposis colorectal cancer, Lynch syndrome) gene analysis; duplication/deletion variants

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 40-year-old man with a family history of colon cancer undergoes a right hemicolectomy to remove a poorly differentiated colonic adenocarcinoma with lymphocytic infiltration. The tumor demonstrates high level microsatellite instability (MSI-H). Immunohistochemical staining reveals a loss of MSH6 protein expression. Prior MLH6 gene sequencing performed to assess the patient for the presence of an HNPCC-related mutation was negative. Deletion/duplication analysis of the MSH6 gene is performed.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: None

Description of Intra-Service Work: High quality genomic DNA previously isolated from whole blood is subjected to multiplex ligation probe ligation analysis (MLPA), which involves hybridization and ligation of multiple pairs of oligonucleotide probes specific for the 10 exons of the MSH6 gene to assess dosage of each exon. The pathologist examines peak heights and calculated ratios of individual exons to control gene sequences to determine dosage status for all exons tested in the MSH6 gene. The pathologist composes a report which specifies the patient's mutation status. The report is edited, signed and the results are communicated to appropriate caregivers.

Description of Post-Service Work: None

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUR analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert panel reviewed the survey results and agreed that the number of survey respondents was extremely low and that conclusions could not be drawn from the data. The expert panel assimilated the overall physician work of 81300 with that of new tier 2 service 81404 *Molecular pathology procedure, Level 5 (eg, analysis of 2-5 exons by DNA sequence analysis, mutation scanning or duplication/deletion variants of 6-10 exons, or characterization of a dynamic mutation disorder/triplet repeat by Southern blot analysis)* (Recommended Work RVU = 0.65, 30 minutes). CAP recommends a direct crosswalk of 81300 to the physician work and time of CPT code 81404, based on work described in the CPT descriptors.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The molecular stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pathology                      How often? Rarely

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|

|-----------|-----------|------------|---|

Do many physicians perform this service across the United States?

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 88182

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 81301      Tracking Number   Z25

Original Specialty Recommended RVU: **0.50**Presented Recommended RVU: **0.50**

Global Period: XXX

RUC Recommended RVU: **0.50**

CPT Descriptor: Microsatellite instability analysis (eg, hereditary non-polyposis colorectal cancer, Lynch syndrome) of markers for mismatch repair deficiency (eg, BAT25, BAT26), includes comparison of neoplastic and normal tissue, if performed

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 45-year-old male patient presents with fatigue and weight loss. On physical examination, occult blood is discovered in the stool. The patient's family history is positive for colon cancer in several relatives. The patient undergoes a right hemicolectomy after a large, poorly differentiated adenocarcinoma with lymphocytic infiltration is found in the right colon. Microsatellite instability (MSI) testing is performed on the tumor and adjacent normal tissue.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: None

Description of Intra-Service Work: Paraffin is removed, and DNA is isolated from the patient's tumor and normal tissue. Each DNA isolate is subjected to a multiplex PCR amplification reaction that utilizes a combination of 7 fluorescently-labeled primer sets directed toward 5 mononucleotide repeat markers (BAT-25, BAT-26, NR-21, NR-24, and MONO-27), and 2 pentanucleotide repeat markers (Penta C and Penta D). The fluorescent PCR products from the tumor and normal tissue are each separated by capillary electrophoresis. The pathologist determines the MSI status of the tumor by comparing the electrophoretic patterns generated by the PCR products from tumor and normal tissue DNA in relation to a sizing standard for each of the repeat markers, and assessing the proportion of unstable markers. The pathologist composes a report which specifies the MSI status of the tumor. The report is edited, signed and the results are communicated to appropriate caregivers.

Description of Post-Service Work: None

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUR analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert panel reviewed the survey data from 41 pathologists who perform the service and compared it to the key reference code 88291 (Work RVU = 0.52, 20 minutes). The survey respondents indicated code 81301 is less slightly intense and complex as 88291, although they indicated it was more overall work, with a median Work RVU = 0.70. The expert panel agreed that the median physician time of 20 minutes is typical and compared to the key reference service, the 25<sup>th</sup> percentile work RVU of 0.50 appropriately values new CPT code 81301 within this family of services.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The molecular stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pathology                      How often? Rarely

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 88182

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 81302      Tracking Number   Z26

Original Specialty Recommended RVU: **0.65**

Global Period: XXX

Presented Recommended RVU: **0.65**RUC Recommended RVU: **0.65**

CPT Descriptor: MECP2 (methyl CpG binding protein 2) (eg, Rett syndrome) gene analysis; full sequence analysis

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 2 1/2 year-old girl born to a G2P2 mother following an unremarkable pregnancy presents to her pediatrician with regression in her language and motor skills over several months. On physical examination, the patient is small, with a head circumference in the 5th percentile. She has mildly decreased muscle tone in her limbs and slight truncal ataxia. She displays occasional abnormal limb posturing, as well as repetitive hand wringing. Rett syndrome is suspected. An anticoagulated peripheral blood sample is submitted for MECP2 sequencing to assess the patient's MECP2 mutation status.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: None

Description of Intra-Service Work: High quality genomic DNA is isolated from whole blood and subjected to 4 individual PCR amplification reactions, the products of which encompass the entire coding sequence, intron-exon boundaries and portions of 5' and 3'-untranslated regions of the MECP2 gene. The PCR products from each reaction undergo bidirectional dideoxynucleotide chain termination sequencing using a capillary electrophoresis instrument. The pathologist evaluates the sequencing electropherograms for potential nucleotide sequence variants, insertions, deletions or other changes. The pathologist compares this evaluation with possible variations suggested by computer software to ensure that all abnormalities are identified. The pathologist composes a report which specifies the patient's mutation status. The report is edited, signed and the results are communicated to appropriate caregivers.

Description of Post-Service Work: None

| Post-Service intensity/complexity  |      |      |

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPOT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert panel reviewed the survey results and agreed that the number of survey respondents was extremely low and that conclusions could not be drawn from the data. The expert panel assimilated the overall physician work of 81302 with that of new tier 2 service 81404 *Molecular pathology procedure, Level 5 (eg, analysis of 2-5 exons by DNA sequence analysis, mutation scanning or duplication/deletion variants of 6-10 exons, or characterization of a dynamic mutation disorder/triplet repeat by Southern blot analysis)* (Recommended Work RVU = 0.65, 30 minutes). CAP recommends a direct crosswalk of 81302 to the physician work and time of CPT code 81404, based on work described in the CPT descriptors.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The molecular stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pathology                      How often? Rarely

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

|-----------|-----------|------------|---|

Do many physicians perform this service across the United States?

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 88182

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 81303      Tracking Number   Z27

Original Specialty Recommended RVU: **0.52**Presented Recommended RVU: **0.52**

Global Period: XXX

RUC Recommended RVU: **0.52**

CPT Descriptor: MECP2 (methyl CpG binding protein 2) (eg, Rett syndrome) gene analysis; known familial variant

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 14 month-old girl born to a G2P2 mother who has a known MECP2 mutation presents to her pediatrician with developmental delay. The patient's older sister was diagnosed with Rett syndrome two years previously, and a mutation in the MECP2 gene was identified. At that time, the patient's mother was tested and was found to carry the identical MECP2 mutation. An anticoagulated peripheral blood sample is submitted for MECP2 sequencing to assess the patient for the known familial MECP2 mutation.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&amp;M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: None

Description of Intra-Service Work: High quality genomic DNA is isolated from whole blood and subjected to PCR amplification reaction of the exon that contains the known familial MECP2 mutation. The PCR products undergo bidirectional dideoxynucleotide chain termination sequencing using a capillary electrophoresis instrument. The pathologist evaluates the sequencing electropherograms for the known familial mutation and any other variants that may be present. The pathologist composes a report which specifies the patient's mutation status. The report is edited, signed and the results are communicated to appropriate caregivers.

Description of Post-Service Work: None

| 88387               | XXX           | 0.62            | RUC Time           |

CPT Descriptor Macroscopic examination, dissection, and preparation of tissue for non-microscopic analytical studies (eg, nucleic acid-based molecular studies); each tissue preparation (eg, a single lymph node)

**KEY MPC COMPARISON CODES:**

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert panel reviewed the survey results and agreed that the number of survey respondents was extremely low and that conclusions could not be drawn from the data. The expert panel assimilated the overall physician work of 81303 with that of new tier 2 service 81403 *Molecular pathology procedure, Level 4 (eg, analysis of single exon by DNA sequence analysis, analysis of >10 amplicons using multiplex PCR in 2 or more independent reactions, mutation scanning or duplication/deletion variants of 2-5 exons)* (Recommended Work RVU = 0.52, 28 minutes). CAP recommends a direct crosswalk of 81303 to the physician work and time of CPT code 81403, based on work described in the CPT descriptors.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The molecular stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pathology                      How often? Rarely

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

Do many physicians perform this service across the United States?

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 88182

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 81304      Tracking Number   Z28

Original Specialty Recommended RVU: **0.52**Presented Recommended RVU: **0.52**

Global Period: XXX

RUC Recommended RVU: **0.52**

CPT Descriptor: MECP2 (methyl CpG binding protein 2) (eg, Rett syndrome) gene analysis; duplication/deletion variants

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 2 1/2 year-old girl born to a G2P2 mother following an unremarkable pregnancy presents to her pediatrician with regression in her language and motor skills over several months. On physical examination, the patient is small with a head circumference in the 5th percentile. She has mildly decreased muscle tone in her limbs and slight truncal ataxia. She displays occasional abnormal limb posturing, as well as repetitive hand wringing. Rett syndrome is suspected. An anticoagulated peripheral blood sample was submitted to the laboratory for MECP2 sequencing, and a mutation was not detected. Deletion/duplication analysis of the MECP2 gene is performed.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: None

Description of Intra-Service Work: High quality genomic DNA previously isolated from whole blood is subjected to multiplex ligation probe ligation analysis (MLPA), which involves hybridization and ligation of oligonucleotide probes specific for the 4 exons of the MECP2 gene to assess dosage of each exon. The pathologist examines peak heights and calculated ratios of individual exons to control gene sequences to determine dosage status for all exons tested in the MECP2 gene. The pathologist composes a report which specifies the patient's mutation status. The report is edited, signed and the results are communicated to appropriate caregivers.

Description of Post-Service Work: None

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUR analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert panel reviewed the survey results and agreed that the number of survey respondents was extremely low and that conclusions could not be drawn from the data. The expert panel assimilated the overall physician work of 81304 with that of new tier 2 service 81403 *Molecular pathology procedure, Level 4 (eg, analysis of single exon by DNA sequence analysis, analysis of >10 amplicons using multiplex PCR in 2 or more independent reactions, mutation scanning or duplication/deletion variants of 2-5 exons)* (Recommended Work RVU = 0.52, 28 minutes). CAP recommends a direct crosswalk of 81304 to the physician work and time of CPT code 81403, based on work described in the CPT descriptors.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The molecular stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pathology                      How often? Rarely

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

|           |           |            |   |
|-----------|-----------|------------|---|

Presented Recommended RVU: **0.39**RUC Recommended RVU: **0.39**

CPT Descriptor: NPM1 (nucleophosmin) (eg, acute myeloid leukemia) gene analysis, exon 12 variants

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 55-year-old man presents to his primary care physician complaining of fatigue, dyspnea on exertion, and easy bruising. The patient's hemogram demonstrates leukocytosis with 30% blasts, anemia and thrombocytopenia. The peripheral blood smear shows decreased platelets and red blood cells along with large blasts with prominent nucleoli and Auer rods. The bone marrow contains 80% blasts which demonstrate an aberrant immunophenotype (CD33/CD13-positive with some cells expressing CD34 and CD117). The karyotype of the malignant cells is normal. A sample of anticoagulated bone marrow is submitted for NPM1 exon 12 tetranucleotide insertion mutation testing.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: None

Description of Intra-Service Work: Upon receipt of the specimen high quality genomic DNA is isolated. A single PCR amplification is performed encompassing the region which normally contains NPM1 tetranucleotide insertion mutations. The fluorescent PCR products are separated by capillary electrophoresis. The pathologist evaluates the electropherogram comparing the relative sizes of the PCR product(s) in relation to a control peak to determine the NPM1 exon 12 mutation status. The pathologist composes a report describing the NPM1 exon 12 mutation status of the patient's leukemic cells. The report is edited, signed and the results are communicated to appropriate caregivers.

Description of Post-Service Work: None

CPT Descriptor 1 Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A problem focused history; A problem focused examination; Straightforward medical decision making. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are self limited or minor. Physicians typically spend 10 minutes face-to-face with the patient and/or family.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert panel reviewed the survey data from pathologists who perform the service and compared it to the key reference code 88291 (Work RVU = 0.52, 20 minutes). The survey respondents indicated code 81310 is less intense and complex than 88291, and the median Work RVU = 0.51. The expert panel agreed that the survey respondents underestimated the time spent creating the report and communicating the results. The expert panel therefore recommends 19 total minutes of physician time similar to 88291 (20 minutes) as typical for this service. The expert panel also agreed that the 25<sup>th</sup> percentile work RVU of 0.39 appropriately values new CPT code 81310 within this family of services.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The molecular stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pathology                      How often? Rarely

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|
|-----------|-----------|------------|---|

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
| Specialty | Frequency | Percentage | % |

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 5,000  
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate.

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
| Specialty | Frequency | Percentage | % |
| Specialty | Frequency | Percentage | % |

Do many physicians perform this service across the United States?

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 88182

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 81317      Tracking Number   Z30

Original Specialty Recommended RVU: **1.40**Presented Recommended RVU: **1.40**

Global Period: XXX

RUC Recommended RVU: **1.40**

CPT Descriptor: PMS2 (postmeiotic segregation increased 2 [*S. cerevisiae*]) (eg, hereditary non-polyposis colorectal cancer, Lynch syndrome) gene analysis; full sequence analysis

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 45-year-old male patient presents with fatigue and weight loss. On physical examination, occult blood is discovered in the stool. The patient's family history is positive for colon cancer in several relatives. The patient undergoes a right hemicolectomy after a large, poorly differentiated adenocarcinoma with lymphocytic infiltration is found in the right colon. Microsatellite instability testing is performed on the tumor demonstrates high level instability (MSI-H). Immunohistochemical staining reveals a loss of PMS2 protein expression. An anticoagulated peripheral blood sample is submitted for PMS2 sequencing to assess the patient for the presence of an HNPCC-related mutation.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: None

Description of Intra-Service Work: High quality genomic DNA is isolated from whole blood and subjected to 15 individual PCR amplification reactions. The PCR products from each reaction undergo bidirectional dideoxynucleotide chain termination sequencing using a capillary electrophoresis instrument. The pathologist evaluates the sequencing electropherograms for potential nucleotide sequence variants, insertions, deletions or other changes. The pathologist compares this evaluation with possible variations suggested by computer software to ensure that all abnormalities are identified. The pathologist composes a report which specifies the patient's mutation status to include information from a database and literature search regarding the significance of variants identified. The report is edited, signed and the results are communicated to appropriate caregivers.

Description of Post-Service Work: None

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert panel reviewed the survey results and agreed that the number of survey respondents was extremely low and that conclusions could not be drawn from the data. The expert panel assimilated the overall physician work of 81317 with that of new tier 2 service 81406 *Molecular pathology procedure, Level 7 (eg, analysis of 11-25 exons by DNA sequence analysis, mutation scanning or duplication/deletion variants of 26-50 exons, cytogenomic array analysis for neoplasia)* (Recommended Work RVU = 1.40, 60 minutes). CAP recommends a direct crosswalk of 81317 to the physician work and time of CPT code 81406, based on work described in the CPT descriptors.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The molecular stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pathology                      How often? Rarely

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
| Specialty | Frequency | Percentage | % |
| Specialty | Frequency | Percentage | % |

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 600  
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate.

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
| Specialty | Frequency | Percentage | % |
| Specialty | Frequency | Percentage | % |

Do many physicians perform this service across the United States?

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 88182

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 81318      Tracking Number   Z31

Original Specialty Recommended RVU: **0.52**Presented Recommended RVU: **0.52**

Global Period: XXX

RUC Recommended RVU: **0.52**

CPT Descriptor: PMS2 (postmeiotic segregation increased 2 [S. cerevisiae]) (eg, hereditary non-polyposis colorectal cancer, Lynch syndrome) gene analysis; known familial variants

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 40-year-old asymptomatic woman whose 45-year-old brother was recently diagnosed with colon cancer and Lynch Syndrome presents to her primary care physician for genetic testing. The brother has a disease-associated mutation in the PMS2 gene. An anticoagulated peripheral blood sample from the asymptomatic woman is submitted for testing for this known familial mutation.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: None

Description of Intra-Service Work: High quality genomic DNA is isolated from whole blood and subjected to PCR amplification for the respective PMS2 gene exon that contains the known familial mutation. The PCR products undergo bidirectional dideoxynucleotide chain termination sequencing using a capillary electrophoresis instrument. The pathologist evaluates the sequencing electropherograms for the known familial mutation and any other variants that may be present. The pathologist composes a report which specifies the patient's mutation status. The report is edited, signed and the results are communicated to appropriate caregivers.

Description of Post-Service Work: None

**Modifier -51 Exempt Status**

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

**New Technology/Service:**

Is this new/revised procedure considered to be a new technology or service? Yes

**KEY REFERENCE SERVICE:**

|                     |               |                 |                    |
|---------------------|---------------|-----------------|--------------------|
| <u>Key CPT Code</u> | <u>Global</u> | <u>Work RVU</u> | <u>Time Source</u> |
| 88387               | XXX           | 0.62            | RUC Time           |

CPT Descriptor Macroscopic examination, dissection, and preparation of tissue for non-microscopic analytical studies (eg, nucleic acid-based molecular studies); each tissue preparation (eg, a single lymph node)

**KEY MPC COMPARISON CODES:**

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

|-----------------------------------|--|--|

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUR analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert panel reviewed the survey results and agreed that the number of survey respondents was extremely low and that conclusions could not be drawn from the data. The expert panel assimilated the overall physician work of 81318 with that of new tier 2 service 81403 *Molecular pathology procedure, Level 4 (eg, analysis of single exon by DNA sequence analysis, analysis of >10 amplicons using multiplex PCR in 2 or more independent reactions, mutation scanning or duplication/deletion variants of 2-5 exons)* (Recommended Work RVU = 0.52, 28 minutes). CAP recommends a direct crosswalk of 81318 to the physician work and time of CPT code 81403, based on work described in the CPT descriptors.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The molecular stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pathology                      How often? Rarely

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|

| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|
|-----------|-----------|------------|---|

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 200  
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate.

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|

|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|

Do many physicians perform this service across the United States?

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 88182

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 81319      Tracking Number   Z32

Original Specialty Recommended RVU: **0.80**Presented Recommended RVU: **0.80**

Global Period: XXX

RUC Recommended RVU: **0.80**

CPT Descriptor: PMS2 (postmeiotic segregation increased 2 [*S. cerevisiae*]) (eg, hereditary non-polyposis colorectal cancer, Lynch syndrome) gene analysis; duplication/deletion variants

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 40-year-old man with a family history of colon cancer undergoes a right hemicolectomy to remove a poorly differentiated colonic adenocarcinoma with lymphocytic infiltration. The tumor demonstrates high level microsatellite instability. Immunohistochemistry staining reveals a loss of PMS2 protein expression. Prior PMS2 gene sequencing performed to assess the patient for the presence of an HNPCC-related mutation was negative. Deletion/duplication analysis of the PMS2 gene is performed.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: None

Description of Intra-Service Work: High quality genomic DNA previously isolated from whole blood is subjected to multiplex ligation probe ligation analysis (MLPA) which involves hybridization and ligation of multiple pairs of oligonucleotide probes specific for 13 of the 15 exons of the PMS2 gene to assess dosage of each exon. The pathologist examines peak heights and calculated ratios of individual exons to control gene sequences to determine dosage status for all exons tested in the PMS2 gene. The pathologist composes a report which specifies the patient's mutation status. The report is edited, signed and the results are communicated to appropriate caregivers.

Description of Post-Service Work: None

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert panel reviewed the survey results and agreed that the number of survey respondents was extremely low and that conclusions could not be drawn from the data. The expert panel assimilated the overall physician work of 81319 with that of new tier 2 service 81405 *Molecular pathology procedure, Level 6 (eg, analysis of 6-10 exons by DNA sequence analysis, mutation scanning or duplication/deletion variants of 11-25 exons)* (Recommended Work RVU = 0.80, 30 minutes). CAP recommends a direct crosswalk of 81319 to the physician work and time of CPT code 881405, based on work described in the CPT descriptors.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The molecular stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pathology                      How often? Rarely

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 400  
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate.

|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
| Specialty | Frequency | Percentage | % |
| Specialty | Frequency | Percentage | % |

Do many physicians perform this service across the United States?

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 88182

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 81331      Tracking Number   Z33

Original Specialty Recommended RVU: **0.39**Presented Recommended RVU: **0.39**

Global Period: XXX

RUC Recommended RVU: **0.39**

CPT Descriptor: SNRPN/UBE3A (small nuclear ribonucleoprotein polypeptide N and ubiquitin protein ligase E3A) (eg, Prader-Willi syndrome and/or Angelman syndrome), methylation analysis

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 2-year-old girl is brought to a pediatrician for evaluation. She has consistently been in the 5th to 10th percentile on growth charts, is somewhat developmentally delayed, and is a voracious eater. The pediatrician discusses the possibility of Prader-Willi syndrome with the parents. A sample of anticoagulated peripheral blood is submitted for SNRPN/UBE3A methylation analysis.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: None

Description of Intra-Service Work: High quality genomic DNA is isolated from the blood sample and undergoes bisulfite modification to convert unmethylated cytosine nucleotides to uracil. Following PCR amplification using primers specific for sequences on the maternal (methylated) and paternal (unmethylated) chromosomes, the PCR products are separated on agarose gels. The pathologist evaluates the electrophoretic patterns to determine whether normal biparental inheritance is demonstrated. The pathologist composes a report which specifies the patient's SNRPN/UBE3A mutation status. The report is edited, signed and the results are communicated to appropriate caregivers.

Description of Post-Service Work: None

CPT Descriptor 1 Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A problem focused history; A problem focused examination; Straightforward medical decision making. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are self limited or minor. Physicians typically spend 10 minutes face-to-face with the patient and/or family.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert panel reviewed the survey data from pathologists who perform the service and compared it to the key reference code 88291 (Work RVU = 0.52, 20 minutes). The survey respondents indicated code 81331 is slightly less overall work than 88291 with the median Work RVU = 0.48, but also indicated the work was more intense than the reference code in the intra-service period. The expert panel agreed that the median physician time of 15 minutes is typical and compared to the key reference service, the 25<sup>th</sup> percentile Work RVU of 0.39 appropriately values new CPT code 81331 within this family of services.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The molecular stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pathology                      How often? Rarely

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|
|-----------|-----------|------------|---|

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
| Specialty | Frequency | Percentage | % |

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 250  
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate.

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
| Specialty | Frequency | Percentage | % |
| Specialty | Frequency | Percentage | % |

Do many physicians perform this service across the United States?

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 88182

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code:81332      Tracking Number    Z34

Original Specialty Recommended RVU: **0.40**Presented Recommended RVU: **0.40**

Global Period: XXX

RUC Recommended RVU: **0.40**

CPT Descriptor: SERPINA1 (serpin peptidase inhibitor, clade A, alpha-1 antiproteinase, antitrypsin, member 1) (eg, alpha-1-antitrypsin deficiency), gene analysis, common variants (eg, \*S and \*Z)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 53-year-old woman with an extensive smoking history complains to her family physician that she has been experiencing modest but increasing shortness of breath. Pulmonary function studies suggest mild airflow obstruction consistent with chronic obstructive pulmonary disease. Liver enzyme studies are normal. Alpha-1-antitrypsin deficiency is part of the differential diagnosis. An anticoagulated peripheral blood sample is submitted for SERPINA1 genotype determination of the 'Z' and 'S' alleles.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: None

Description of Intra-Service Work: High quality genomic DNA is isolated and subjected to two separate PCR amplification reactions encompassing the regions of the SERPINA1 gene which code for the 'Z' and 'S' alleles. PCR amplification products are digested with different restriction endonucleases, and the digestion products are visualized separately by ethidium bromide staining following agarose gel electrophoresis. The pathologist evaluates the patterns of restriction endonuclease digestion products on gel photographs to determine the patient's mutation status for the normal 'M' as well as mutant 'Z' and 'S' alleles. The pathologist composes a report which specifies the patient's SERPINA1 mutation status. The report is edited, signed and the results are communicated to the appropriate caregivers.

Description of Post-Service Work: None

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUR analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert panel reviewed the survey results and agreed that the number of survey respondents was extremely low and that conclusions could not be drawn from the data. The expert panel assimilated the overall physician work of 81332 with that of new tier 2 service 81401 *Molecular pathology procedure, Level 2 (eg, 2-10 SNPs, 1 methylated variant, or 1 somatic variant [typically using nonsequencing target variant analysis], or detection of a dynamic mutation disorder/triplet repeat)* (Recommended Work RVU = 0.40, 15 minutes). CAP recommends a direct crosswalk of 81332 to the physician work and time of CPT code 81401, based on work described in the CPT descriptors.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The molecular stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pathology                      How often? Rarely

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

|-----------|-----------|------------|---|

Do many physicians perform this service across the United States?

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 88182

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 81340      Tracking Number   Z35

Original Specialty Recommended RVU: **0.63**Presented Recommended RVU: **0.63**

Global Period: XXX

RUC Recommended RVU: **0.63**

CPT Descriptor: TRB@ (T cell antigen receptor, beta) (eg, leukemia and lymphoma), gene rearrangement analysis to detect abnormal clonal population(s); using amplification methodology (eg, polymerase chain reaction)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 55-year-old male patient presents with fever, episodic night sweats, weight loss and lymphadenopathy. A biopsy of an enlarged supraclavicular node is taken; initial morphologic and immunologic studies demonstrate a T-cell population that is suspicious for malignancy. A frozen sample of the lymph node is submitted for T-cell antigen receptor gene, beta rearrangement studies as part of a pathologic evaluation for lymphoma.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: None

Description of Intra-Service Work: High quality genomic DNA is extracted from a lymph node sample. In order to detect a clonally rearranged population of T-cells against a background of polyclonal T-cells, 3 multiplex PCR reactions are performed using fluorescent-linked primers directed at the variable, joining, and diversity regions of the T-cell receptor beta chain genes. The resulting PCR products are separated using capillary electrophoresis. The pathologist evaluates the capillary tracing for a predominant fragment of discrete size and appropriate morphology against background polyclonal or oligoclonal peaks for evidence of clonality. The pathologist composes a report which specifies the clonality status of the T-cell population. The report is edited, signed and the results are communicated to appropriate caregivers.

Description of Post-Service Work: None

| Post-Service intensity/complexity  |      |      |

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert panel reviewed the survey data from pathologists who perform the service and compared it to the key reference code 88182 (Work RVU = 0.77, 20 minutes). The survey respondents indicated code 81340 is slightly less intense and complex than 88182. However, the respondents also equated the new code's overall work with that of 88182, with a median Work RVU = 0.77. The expert panel agreed that the median physician time of 25 minutes is typical and compared to the key reference service, the survey's 25<sup>th</sup> percentile work RVU of 0.63 appropriately values new CPT code 81210 within this family of services.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The molecular stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pathology                      How often? Rarely

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

Do many physicians perform this service across the United States?

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 88182

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 81341      Tracking Number   Z36

Original Specialty Recommended RVU: **0.45**Presented Recommended RVU: **0.45**

Global Period: XXX

RUC Recommended RVU: **0.45**

CPT Descriptor: TRB@ (T cell antigen receptor, beta) (eg, leukemia and lymphoma), gene rearrangement analysis to detect abnormal clonal population(s); using direct probe methodology (eg, Southern blot)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 55-year-old male patient presents with fever, episodic night sweats, weight loss and lymphadenopathy. A biopsy of an enlarged supraclavicular node is taken; initial morphologic and immunologic studies demonstrate a T-cell population that is suspicious for malignancy. T-cell gene rearrangement studies performed using PCR analysis are indeterminate. A frozen sample of the lymph node is submitted to the laboratory for Southern blot analysis to further assess for a clonally rearranged population of T-cells.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: None

Description of Intra-Service Work: A large quantity of high quality genomic DNA is isolated from the lymph node sample. Gel electrophoresis of the extracted DNA is performed to assess DNA integrity. The DNA undergoes digestion with 3 restriction enzymes. The genomic fragments are separated by gel electrophoresis, transferred to a nylon membrane by capillary action, and hybridized to radiolabeled probes directed toward the TCRB joining regions (Jβ1 and 2). The pathologist evaluates the autoradiographically generated hybridization patterns of the digestion fragments in relation to marker and control lanes to determine T-cell clonality status. The pathologist composes a report which specifies the clonality status of the T-cell population. The report is edited, signed and the results are communicated to appropriate caregivers.

Description of Post-Service Work: None

CPT Descriptor 1 Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A problem focused history; A problem focused examination; Straightforward medical decision making. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are self limited or minor. Physicians typically spend 10 minutes face-to-face with the patient and/or family.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert panel reviewed the survey results and agreed that the number of survey respondents was extremely low and that conclusions could not be drawn from the data. The expert panel assimilated the overall physician work of 81341 with that of CPT code 88388 *Macroscopic examination, dissection, and preparation of tissue for non-microscopic analytical studies (eg, nucleic acid-based molecular studies); in conjunction with a touch imprint, intraoperative consultation, or frozen section, each tissue preparation (eg, a single lymph node) (List separately in addition to code for primary procedure)* (Recommended Work RVU = 0.45, 12 minutes). However the expert panel agreed that the survey median time of 19 minutes accurately reflects the typical time required to perform this service. CAP recommends a direct crosswalk of 81341 to the physician Work RVU of 88388 at 0.45 RVUs and a total physician time of 19 minutes, based on time, physician work effort, and intensity and complexity of the service.

---

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.
- 

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The molecular stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pathology                      How often? Rarely

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|
|-----------|-----------|------------|---|

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
| Specialty | Frequency | Percentage | % |

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,000  
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate.

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
| Specialty | Frequency | Percentage | % |
| Specialty | Frequency | Percentage | % |

Do many physicians perform this service across the United States?

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 88182

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 81342      Tracking Number   Z36

Original Specialty Recommended RVU: **0.57**Presented Recommended RVU: **0.57**

Global Period: XXX

RUC Recommended RVU: **0.57**

CPT Descriptor: TRG@ (T cell antigen receptor, gamma) (eg, leukemia and lymphoma), gene rearrangement analysis, evaluation to detect abnormal clonal population(s)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 55-year-old male patient presents with fever, episodic night sweats, weight loss and lymphadenopathy. A biopsy of an enlarged supraclavicular node is taken; initial morphologic and immunologic studies demonstrate a T-cell population that is suspicious for malignancy. A frozen sample of the lymph node is submitted for T-cell antigen receptor gene, gamma rearrangement studies as part of a pathologic evaluation for lymphoma.

Percentage of Survey Respondents who found Vignette to be Typical: 98%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: None

Description of Intra-Service Work: High quality genomic DNA is extracted from a lymph node sample. In order to detect a clonally rearranged population of T-cells against a background of polyclonal T-cells, 2 multiplex PCR reactions are performed using fluorescent linked primers directed toward the variable and joining regions of the T-cell receptor gamma genes. The resulting PCR products are separated using capillary electrophoresis. The pathologist evaluates the capillary tracing for a predominant fragment of discrete size and appropriate shape against background polyclonal or oligoclonal peaks for evidence of clonality. The pathologist composes a report which specifies the clonality status of the T-cell population. The report is edited, signed and the results are communicated to appropriate caregivers.

Description of Post-Service Work: None

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert panel reviewed the survey data from 50 pathologists who perform the service and compared it to the key reference code 88291 (Work RVU = 0.52, 20 minutes). The survey respondents indicated code 81342 takes more time

and work than 88291. The survey's median Work RVU=0.77, and median time = 25 minutes. The survey respondents also indicated overall that the intensity and complexity of the new code is greater than the key reference code. The expert panel agreed that the median physician time of 25 minutes is typical and compared to the key reference service, the 25<sup>th</sup> percentile work RVU of 0.57 appropriately values new CPT code 81342 within this family of services.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The molecular stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pathology How often? Rarely

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 6,000  
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate.

Do many physicians perform this service across the United States?

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 88182

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 81350      Tracking Number   Z38

Original Specialty Recommended RVU: **0.37**Presented Recommended RVU: **0.37**

Global Period: XXX

RUC Recommended RVU: **0.37**

CPT Descriptor: UGT1A1 (UDP glucuronosyltransferase 1 family, polypeptide A1) (eg, irinotecan metabolism), gene analysis, common variants (eg, \*28, \*36, \*37)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 60-year-old male patient presents with fatigue and weight loss. The patient is found to have poorly differentiated adenocarcinoma of the colon with unresectable metastases to the liver. Despite 5-FU, leucovorin, and oxaliplatin (FLOFOX) therapy, the patient's disease progresses, and irinotecan therapy is recommended. Prior to beginning irinotecan treatment, an anticoagulated peripheral blood sample is submitted to test the patient's UGT1A1 promoter TA repeat numbers.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: None

Description of Intra-Service Work: High quality genomic DNA is isolated from whole blood and subjected to PCR amplification for the region containing the UGT1A1 promoter TA repeat segment. The fluorescent products are subjected to analysis using capillary electrophoresis. The pathologist evaluates the electropherogram and compares it to a sizing ladder to determine the patient's genotype. Based on this analysis, the pathologist composes a report which specifies the patient's genotype. The report is edited, signed and the results are communicated to appropriate caregivers.

Description of Post-Service Work: None

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert panel reviewed the survey data from pathologists who perform the service and compared it to the key reference code 88291 (Work RVU = 0.52, 20 minutes). The survey respondents indicated code 81350 takes 15 minutes

to provide with less overall work than the key reference service. (median Work RVU = 0.48) The expert panel agreed that the median physician time of 15 minutes is typical and compared to the key reference service, the 25<sup>th</sup> percentile work RVU of 0.37 appropriately values new CPT code 81350 within this family of services.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The molecular stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pathology                      How often? Rarely

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |

CPT Descriptor: VKORC1 (vitamin K epoxide reductase complex, subunit 1) (eg, warfarin metabolism), gene analysis, common variants (eg, -1639/3673)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 60-year-old man presents to his physician with complaints of fatigue, lightheadedness, and palpitations. A diagnostic workup revealed atrial fibrillation, for which the physician would like to prescribe warfarin. In order to facilitate rapid achievement of the proper dose, she orders warfarin sensitivity genotyping for common variants of the VKORC1 gene, which have been shown to significantly influence the dose of warfarin needed to achieve appropriate therapeutic levels. A sample of peripheral blood is submitted for genotypic analysis of the VKORC1 gene.

Percentage of Survey Respondents who found Vignette to be Typical: 92%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: None

Description of Intra-Service Work: High quality genomic DNA is isolated and subjected to a multiplexed PCR reaction, using primers specific for the most common variants, VKORC1 (-1639A). The amplified target DNA is hybridized to a ferrocene signal probe and to an allele-specific capture probe, which is immobilized on an oligoarray. The captured target DNA generates a specific electrochemical signal that identifies the target DNA sequence. The pathologist examines the patient's results and analytic system controls, and determines whether VKORC1 variants are present in the patient's sample. The pathologist composes a report which specifies the patient's genotype. The report is edited, signed and the results are communicated to appropriate caregivers.

Description of Post-Service Work: None

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert panel reviewed the survey data from pathologists who perform the service and compared it to the key reference code 86320 (Work RVU = 0.37, 17 minutes). The survey respondents indicated code 81355 is more intense and complex as 86320 and the median Work RVU = 0.50. The expert panel agreed that the median physician time of 15 minutes is typical and compared to the key reference service, the 25<sup>th</sup> percentile work RVU of 0.38 appropriately values new CPT code 81355 within this family of services.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The molecular stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pathology How often? Rarely

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
| Specialty | Frequency | Percentage | % |
| Specialty | Frequency | Percentage | % |

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 4,000  
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate.

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
| Specialty | Frequency | Percentage | % |
| Specialty | Frequency | Percentage | % |

Do many physicians perform this service across the United States?

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 88182

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 81370      Tracking Number   Z39

Original Specialty Recommended RVU: **0.54**Presented Recommended RVU: **0.54**

Global Period: XXX

RUC Recommended RVU: **0.54**

CPT Descriptor: HLA Class I and II typing, low resolution (eg, antigen equivalents); HLA-A, -B, -C, -DRB1/3/4/5, and -DQB1

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 55-year-old man with insulin dependent diabetes mellitus has end stage renal disease for which he is receiving dialysis treatment. The patient is found to be a suitable renal transplant candidate, and HLA typing is requested for listing on the UNOS kidney registry for potential recipients. A sample of anticoagulated peripheral blood is submitted to the laboratory for low resolution HLA-A, -B, -C, -DRB1/3/4/5, and -DQB1 testing.

Percentage of Survey Respondents who found Vignette to be Typical: 93%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: None

Description of Intra-Service Work: High quality genomic DNA is isolated from whole blood. The genomic regions containing the HLA-A, -B, -C, -DRB1/3/4/5 and -DQB1 loci are amplified by PCR using a series of 142 sequence specific primer sets. The amplicons produced are separated by size via gel electrophoresis. The pathologist examines a digitized image or photograph of the ethidium bromide stained gel to assess the presence or absence of amplicons produced for the allele group-specific reactions in comparison to positive and negative controls. Based on the manual analysis of amplicon patterns and with the assistance of computer software, the pathologist determines the HLA type for the HLA-A, -B, -C, DRB1/3/4/5, and -DQB1 loci. The pathologist composes a report which specifies the patient's HLA type at the low resolution level. The report is edited, signed and the results are communicated to appropriate caregivers.

Description of Post-Service Work: None

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUR analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert panel reviewed the survey data and compared it to the key reference code 88291 (Work RVU = 0.52, 20 minutes). The 30 survey respondents indicated 813730 requires more physician work and is more complex or intense in 7 out of 9 measures compared to the key reference service. The expert panel agreed that the median physician time of 15 minutes is typical and compared to the key reference service, the 25<sup>th</sup> percentile work RVU of 0.54 appropriately values 81370 within this family of services.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The molecular stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pathology                      How often? Rarely

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

|-----------|-----------|------------|---|

Do many physicians perform this service across the United States?

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 88182

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 81371      Tracking Number   Z40

Original Specialty Recommended RVU: **0.77**Presented Recommended RVU: **0.60**

Global Period: XXX

RUC Recommended RVU: **0.60**

CPT Descriptor: HLA Class I and II typing, low resolution (eg, antigen equivalents); HLA-A, -B, and -DRB1/3/4/5 (eg, verification typing)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 45-year-old man with acute myelogenous leukemia with unfavorable cytogenetics is in his first remission. The patient will require a hematopoietic stem cell transplant. A potential HLA matched unrelated donor has been identified through the National Marrow Donor Program. Prior to final donor selection, a sample of anticoagulated peripheral blood is submitted to the laboratory for low resolution typing for HLA-A, -B, -DRB1/3/4/5 to confirm the recipient's typing and donor match.

Percentage of Survey Respondents who found Vignette to be Typical: 93%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: None

Description of Intra-Service Work: High quality genomic DNA is isolated from whole blood. The genomic regions containing the HLA-A, -B, -DRB1/3/4/5 loci are amplified by PCR using a series of 95 sequence specific primer sets. The amplicons produced are separated by size via gel electrophoresis. The pathologist examines a digitized image or photograph of the ethidium bromide stained gel to assess the presence or absence of amplicons produced for the allele group-specific reactions in comparison to positive and negative controls. Based on the manual analysis of the amplicon patterns and with the assistance of computer software, the pathologist determines the HLA type for the HLA-A, -B, and -DRB1/3/4/5 loci, and compares the results to the original high resolution typing used for the donor search to verify the original typing result. The pathologist composes a report which specifies the patient's HLA type from both analyses. The report is edited, signed and the results are communicated to appropriate caregivers.

Description of Post-Service Work: None

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert panel reviewed the survey data and compared it to the key reference code 86077 (Work RVU = 0.94, 40 minutes). The survey respondents indicated that new code 81371 requires less physician work than the reference code. The expert panel agreed that the median physician time of 30 minutes is typical and compared to the key reference service, the median work RVU of 0.77 appropriately values 81371 within this family of services.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The molecular stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pathology How often? Rarely

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?  
10,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty.  
Please explain the rationale for this estimate.

|           |           |            |   |

| Specialty | Frequency | Percentage | % |
| Specialty | Frequency | Percentage | % |
| Specialty | Frequency | Percentage | % |

Do many physicians perform this service across the United States?

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 88182

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 81372      Tracking Number   Z41

Original Specialty Recommended RVU: **0.52**Presented Recommended RVU: **0.52**

Global Period: XXX

RUC Recommended RVU: **0.52**

CPT Descriptor: HLA Class I typing, low resolution (eg, antigen equivalents); complete (ie, HLA-A, -B, and -C)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 40-year-old woman has a history of diffuse large cell lymphoma. The patient has undergone chemotherapy and has been multiply transfused. She has become refractory to platelet transfusion as a result of antibodies to Class I HLA antigens. A sample of anticoagulated peripheral blood is submitted to the laboratory for low resolution HLA-A, -B, -C testing to initiate a search for an HLA matched platelet unit for transfusion.

Percentage of Survey Respondents who found Vignette to be Typical: 93%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&amp;M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: None

Description of Intra-Service Work: High quality genomic DNA is isolated from whole blood. The genomic regions containing the HLA-A, -B, -C loci are amplified by PCR using a series of 95 sequence specific primer sets. The amplicons produced are separated by size via gel electrophoresis. The pathologist examines a digitized image or photograph of the ethidium bromide stained gel to assess the presence or absence of amplicons produced for the allele group-specific reactions in comparison to positive and negative controls. Based on the manual analysis of the amplicon patterns and with the assistance of computer software, the pathologist determines the HLA type for the HLA-A, -B, and -C loci. The pathologist composes a report which specifies the patient's HLA type at the low resolution level. The report is edited, signed and the results are communicated to appropriate caregivers.

Description of Post-Service Work: None

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUR analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert panel reviewed the survey data and compared it to the key reference code 88182 (Work RVU = 0.77, 20 minutes). The survey respondents indicated 81372 requires less physician work than the reference code yet this service has a high intensity and complexity within the HLA family. The expert panel agreed that the median physician time of 15 minutes is typical and compared to the key reference service, the 25<sup>th</sup> percentile work RVU of 0.52 appropriately values 81372 within this family of services.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The molecular stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pathology                      How often? Rarely

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

Do many physicians perform this service across the United States?

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 88182

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 81373      Tracking Number   Z42

Original Specialty Recommended RVU: **0.37**Presented Recommended RVU: **0.37**

Global Period: XXX

RUC Recommended RVU: **0.37**

CPT Descriptor: HLA Class I typing, low resolution (eg, antigen equivalents); one locus (eg, HLA-A, B, or -C), each

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 32-year-old woman has a complex array of symptoms and signs that indicate the presence of an autoimmune disorder. Several disorders with HLA-B associations are considered. A sample of anticoagulated peripheral blood is submitted to the laboratory for HLA-B typing.

Percentage of Survey Respondents who found Vignette to be Typical: 93%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&amp;M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: None

Description of Intra-Service Work: High quality genomic DNA is isolated from whole blood. The genomic region containing the HLA-B locus is amplified by PCR using 47 sequence-specific primers sets. The amplicons produced are separated by size via gel electrophoresis. The pathologist examines a digitized image or photograph of the ethidium bromide stained gel to assess the presence or absence of amplicons produced for the allele group-specific reactions in comparison to positive and negative controls. Based on the manual analysis of the amplicon patterns and with the assistance of computer software, the pathologist determines the HLA type for the HLA-B locus. The pathologist composes a report which specifies the patient's HLA-B type at the low resolution level. The report is edited, signed and the results are communicated to appropriate caregivers.

Description of Post-Service Work: None

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert panel reviewed the survey data and compared it to the key reference code 86320 (Work RVU = 0.37, 17 minutes). The survey respondents assimilated the physician work of 81373 to the key reference service. The expert panel agreed that the survey respondents underestimated the total time for the service. Specifically the CAP expert panel agreed that the interpretation and report time was underestimated. The expert panel agreed that a total physician time of 15 minutes is typical and compared to the key reference service, the 25<sup>th</sup> percentile work RVU of 0.37 appropriately values 81373 within this family of services.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The molecular stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pathology                      How often? Rarely

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
| Specialty | Frequency | Percentage | % |
| Specialty | Frequency | Percentage | % |

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 4,000  
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate.

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
| Specialty | Frequency | Percentage | % |
| Specialty | Frequency | Percentage | % |

Do many physicians perform this service across the United States?

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 88291

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 81374      Tracking Number   Z43

Original Specialty Recommended RVU: **0.34**Presented Recommended RVU: **0.34**

Global Period: XXX

RUC Recommended RVU: **0.34**

CPT Descriptor: HLA Class I typing, low resolution (eg, antigen equivalents); one antigen equivalent (eg, B\*27), each

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 37-year-old man has suspected ankylosing spondylitis. A sample of anticoagulated peripheral blood is submitted to the laboratory for HLA-B\*27 testing.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&amp;M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: None

Description of Intra-Service Work: High quality genomic DNA is isolated from whole blood. The genomic region containing the HLA-B locus is amplified with the PCR using a set of primers specific for HLA-B27. The amplicons produced are separated by size via gel electrophoresis. The pathologist examines a digitized image or photograph of the ethidium bromide stained gel to assess the presence or absence of amplicons produced for the allele group-specific reactions in comparison to positive and negative controls. Based on the manual analysis of the amplicon patterns and with the assistance of computer software, the pathologist determines the HLA-B\*27 status. The pathologist composes a report which specifies the patient's HLA-B\*27 status. The report is edited, signed and the results communicated to appropriate caregivers.

Description of Post-Service Work: None

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.
