The expert panel reviewed the survey data and compared it to the key reference code 86320 (Work RVU = 0.37, 17 minutes). The survey respondents indicated the physician work of 81374 was slightly greater than the key reference service however less intense and complex. The expert panel agreed that the survey respondents underestimated the total time for the service. Specifically the CAP expert panel agreed that the interpretation and report time was underestimated. The expert panel agreed that a total physician time of 13 minutes is typical and compared to the key reference service, the 25<sup>th</sup> percentile work RVU of 0.34 appropriately values 81374 within this family of services.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The molecular stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pathology                      How often? Rarely

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 88291

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 81375      Tracking Number   Z44

Original Specialty Recommended RVU: **0.60**Presented Recommended RVU: **0.60**

Global Period: XXX

RUC Recommended RVU: **0.60**

CPT Descriptor: HLA Class II typing, low resolution (eg, antigen equivalents); HLA-DRB1/3/4/5 and -DQB1

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 28-year-old man is being considered as a potential hematopoietic stem cell donor for his sister who has been diagnosed with acute myelogenous leukemia. He and the other asymptomatic siblings were initially typed for Class I HLA (HLA-A,-B,-C). He was found to be a full match for his sister at these loci. A sample of anticoagulated peripheral blood is submitted to the laboratory for low resolution HLA-DRB1/3/4/5 and -DQB1 typing.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: None

Description of Intra-Service Work: High quality genomic DNA is isolated from whole blood. The genomic region containing the HLA-DRB1/3/4/5 and -DQB1 loci are amplified by PCR using 48 sequence-specific primer sets. The amplicons produced are separated by size via gel electrophoresis. The pathologist examines a digitized image or photograph of the ethidium bromide stained gel to assess the presence or absence of amplicons produced for the allele group-specific reactions in comparison to positive and negative controls. Based on the manual analysis of the amplicon patterns and with the assistance of computer software, the pathologist determines the HLA type for the HLA-DRB1/3/4/5, and -DQB1 loci. The pathologist composes a report which specifies the donor's HLA-DRB1/3/4/5 and -DQB1 type at the low resolution level and assesses the match with the recipient. The report is edited, signed and the results are communicated to appropriate caregivers.

Description of Post-Service Work: None

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert panel reviewed the survey data and compared it to the key reference code 88291 (Work RVU = 0.52, 20 minutes). The survey respondents indicated the physician work of 81375 is much greater than the key reference service as the median Work RVU was 0.75. In addition all of the intensity and complexity measures indicated that 81375 is much more complex and intense than 88291. The expert panel agreed that a total physician time of 15 minutes is typical and compared to the key reference service, the 25<sup>th</sup> percentile Work RVU of 0.60 appropriately values 81375 within this family of services.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The molecular stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pathology                      How often? Rarely

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|

|           |           |            |   |

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 88182

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 81376      Tracking Number   Z45

Original Specialty Recommended RVU: **0.62**Presented Recommended RVU: **0.50**

Global Period: XXX

RUC Recommended RVU: **0.50**

CPT Descriptor: HLA Class II typing, low resolution (eg, antigen equivalents); one locus (eg, HLA-DRB1/3/4/5, -DQB1, -DQA1, -DPB1, or -DPA1), each

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 45-year-old man is being considered as a potential kidney donor for a friend with end stage renal disease. The potential recipient has antibodies against multiple HLA-DQ antigens and will be incompatible with 85% of the donor pool. The physician wishes to screen the potential donor for HLA-DQB1 before proceeding with a full donor work-up. A sample of anticoagulated peripheral blood from the potential donor is submitted to the laboratory for HLA-DQB1 typing.

Percentage of Survey Respondents who found Vignette to be Typical: 92%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: None

Description of Intra-Service Work: High quality genomic DNA is isolated from whole blood. The genomic region containing the HLA -DQB1 loci is amplified by PCR using 24 sequence-specific primer sets. The amplicons produced are separated by size via gel electrophoresis. The pathologist examines a digitized image or photograph of the ethidium bromide stained gel to assess the presence or absence of amplicons produced for the allele group-specific reactions in comparison to positive and negative controls. Based on the manual analysis of the amplicon patterns and with the assistance of computer software, the pathologist determines the HLA type for the HLA-DQB1 locus. The pathologist composes a report which specifies the patient's HLA-DQB1 type at the low resolution level. The report is edited, signed and the results are communicated to appropriate caregivers.

Description of Post-Service Work: None

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert panel reviewed the survey data and compared it to the key reference code 88182 (Work RVU = 0.77, 20 minutes). The survey respondents indicated the physician work of 81376 is less physician work than the key reference service as the median Work RVU was 0.62. However, the all intensity and complexity measures indicated that 81376 is similar in complexity and intensity as 88291. The expert panel agreed that a total physician time of 15 minutes is typical and compared to the key reference service, the median Work RVU of 0.62 appropriately values 81376 within this family of services.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The molecular stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pathology                      How often? Rarely

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

|           |           |            |   |

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 88182

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 81377      Tracking Number   Z46

Original Specialty Recommended RVU: **0.43**Presented Recommended RVU: **0.43**

Global Period: XXX

RUC Recommended RVU: **0.43**

CPT Descriptor: HLA Class II typing, low resolution (eg, antigen equivalents); one antigen equivalent, each

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 50-year-old woman presents to an ophthalmologist for ocular pain and photophobia. She has been suffering headaches and dizziness for several weeks. Upon examination, the doctor finds signs of posterior uveitis and observes vitiligo on her face and her arms. He suspects Vogt-Koyanagi-Harada (VKH), an autoimmune disease strongly associated with HLA-DR4. A sample of anti-coagulated peripheral blood is submitted to the laboratory for HLA-DR4 typing.

Percentage of Survey Respondents who found Vignette to be Typical: 89%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&amp;M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: None

Description of Intra-Service Work: High quality genomic DNA is isolated and subjected to PCR amplification using a set of primers specific for the HLA-DRB1\*04 allele group. A series of negative and positive control DNA samples are run in parallel. The amplicons produced are separated by size via gel electrophoresis. The pathologist examines a digitized image or photograph of the ethidium bromide stained gel to assess the presence or absence of amplicons produced for the allele group-specific reactions in comparison to positive and negative controls. Based on the manual analysis of the amplicon patterns and with the assistance of computer software, the pathologist determines the HLA-DRB1\*04 status. The pathologist composes a report which specifies the patient's HLA-DRB1\*04 status. The report is edited, signed and the results are communicated to appropriate caregivers.

Description of Post-Service Work: None

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert panel reviewed the survey data and compared it to the key reference code 88291 (Work RVU = 0.52, 20 minutes). The survey respondents indicated the physician work of 81377 is less than the key reference service as the median Work RVU was 0.51. The expert panel also referenced CPT code 88388 (Work RVU = 0.45, 12 minutes total time) as a good comparison code. The expert panel agreed that a total physician time of 15 minutes is typical and compared to the key reference service, the 25<sup>th</sup> percentile Work RVU of 0.43 appropriately values 81377 within this family of services.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The molecular stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pathology                      How often? Rarely

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|
|-----------|-----------|------------|---|

| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|
|-----------|-----------|------------|---|

| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|
|-----------|-----------|------------|---|

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 2,000  
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate.

| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|
|-----------|-----------|------------|---|

| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|
|-----------|-----------|------------|---|

| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|
|-----------|-----------|------------|---|

Do many physicians perform this service across the United States?

---

### Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 88291

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 81378      Tracking Number   Z47

Original Specialty Recommended RVU: **0.45**Presented Recommended RVU: **0.45**

Global Period: XXX

RUC Recommended RVU: **0.45**

CPT Descriptor: HLA Class I and II typing, high resolution (ie, alleles or allele groups), HLA-A, -B, -C, and -DRB1

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 45-year-old man with acute myelogenous leukemia with unfavorable cytogenetics is in his first remission. The patient will require a hematopoietic stem cell transplant and has no siblings. A sample of anticoagulated peripheral blood is submitted to the laboratory for high resolution HLA-A, -B, -C and -DRB1 testing to search for an HLA matched donor through the National Marrow Donor Program.

Percentage of Survey Respondents who found Vignette to be Typical: 94%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&amp;M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: None

Description of Intra-Service Work: High quality genomic DNA is isolated from whole blood. The genomic regions containing the HLA-A, -B, -C and DRB1 genes are amplified by PCR using locus specific primers. For each locus, the PCR products are sequenced with a series of forward and reverse primers. The pathologist visually analyzes the DNA sequences obtained and assesses their alignment against a consensus sequence and comparison with a database of all known alleles with the assistance of software. Ambiguities are resolved using sequence specific primers. Based on these analyses, the pathologist assigns an HLA type for HLA-A, -B, -C and DRB1 at the allele level. The pathologist composes a report which specifies the patient's HLA type. The report is edited, signed and the results are communicated to appropriate caregivers.

Description of Post-Service Work: None

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUR analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert panel reviewed the survey data and agreed that the survey respondents overestimated the physician work, but not the time involved. The expert panel agreed with the survey respondent's median time of 20 minutes for this service, as the typical time required. The expert panel assimilated the overall physician work with that of recently RUC reviewed service 88388 (Work RVU = 0.45, 12 minutes). CAP recommends a direct crosswalk of 81378 to the physician work of 88388 (Work RVU = 0.45) and a total time of 20 minutes for CPT code 81378.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The molecular stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pathology                      How often? Rarely

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

|-----------|-----------|------------|---|

Do many physicians perform this service across the United States?

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 88291

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 81379      Tracking Number   Z48

Original Specialty Recommended RVU: **0.45**Presented Recommended RVU: **0.45**

Global Period: XXX

RUC Recommended RVU: **0.45**

CPT Descriptor: HLA Class I typing, high resolution (ie, alleles or allele groups); complete (ie, HLA-A, -B, and -C)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 45-year-old man with acute myelogenous leukemia is being considered for a hematopoietic stem cell transplant from an unrelated donor. The potential recipient has been previously typed by high resolution for HLA Class II and low resolution for HLA-A, -B, and -C in an unsuccessful attempt to identify a related donor. To select the best unrelated donor, high resolution typing of the patient is necessary. A sample of anticoagulated peripheral blood is submitted to the laboratory for high resolution HLA-A, -B, and -C allele identification.

Percentage of Survey Respondents who found Vignette to be Typical: 89%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&amp;M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: None

Description of Intra-Service Work: High quality genomic DNA is isolated from whole blood. The genomic regions containing the HLA-A, -B, and -C genes are amplified by PCR using locus specific primers. For each locus, the PCR products are sequenced with a series of forward and reverse primers. The pathologist evaluates the DNA sequences obtained, assesses their alignment against a consensus sequence and compares results against a database of all known alleles with the assistance of computer software. Ambiguities are resolved using sequence specific primers. Based on these analyses, the pathologist assigns an HLA type for HLA-A, -B, and -C at the allele level. The pathologist composes a report which specifies the patient's HLA type. The report is edited, signed and the results are communicated to appropriate caregivers.

Description of Post-Service Work: None

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert panel reviewed the survey data and agreed that the survey respondents overestimated the physician work, but not the time involved. The expert panel agreed with the survey respondent's median time of 15 minutes for this service, as the typical time required. The expert panel assimilated the overall physician work with that of recently RUC reviewed service 88388 (Work RVU = 0.45, 12 minutes). CAP recommends a direct crosswalk of 81379 to the physician work of 88388 (Work RVU = 0.45) and a total time of 15 minutes for CPT code 81379.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The molecular stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pathology                      How often? Rarely

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

|-----------|-----------|------------|---|

Do many physicians perform this service across the United States?

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 88291

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 81380      Tracking Number   Z49

Original Specialty Recommended RVU: **0.45**Presented Recommended RVU: **0.45**

Global Period: XXX

RUC Recommended RVU: **0.45**

CPT Descriptor: HLA Class I typing, high resolution (ie, alleles or allele groups); one locus (eg, HLA-A, -B, or -C), each

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 34 year old woman with acute myelogenous leukemia is being considered for a hematopoietic stem cell transplant from a related donor. Low resolution HLA typing of the patient and several family members identifies a brother who is a potential 2 haplotype match. However, four closely related HLA-B allele groups are segregating in the family, calling into question whether the patient and her brother have inherited identical HLA-B alleles. High resolution typing of the B locus of the patient and her brother is required to resolve this ambiguity. A sample of anticoagulated peripheral blood from the patient is submitted to the laboratory for high resolution HLA-B locus testing to assess her HLA-B allele type for comparison to her brother's type.

Percentage of Survey Respondents who found Vignette to be Typical: 67%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: None

Description of Intra-Service Work: High quality genomic DNA is isolated from whole blood. The genomic regions containing the HLA-B gene are amplified by PCR using locus specific primers. The resulting PCR products are sequenced with a series of forward and reverse primers. The pathologist evaluates the DNA sequences obtained, assesses their alignment against a consensus sequence and compares results against a database of all known alleles with the assistance of computer software. Ambiguities are resolved using sequence specific primers. Based on these analyses, the pathologist assigns an HLA type for HLA-B at the allele level. The pathologist composes a report which specifies the patient's HLA type and assesses the match with the potential donor. The report is edited, signed and the results are communicated to appropriate caregivers.

Description of Post-Service Work: None

**Modifier -51 Exempt Status**

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status?

**New Technology/Service:**

Is this new/revised procedure considered to be a new technology or service? Yes

**KEY REFERENCE SERVICE:**

| <u>Key CPT Code</u> | <u>Global</u> | <u>Work RVU</u> | <u>Time Source</u> |
|---------------------|---------------|-----------------|--------------------|
| 86077               | XXX           | 0.94            | RUC Time           |

CPT Descriptor Blood bank physician services; difficult cross match and/or evaluation of irregular antibody(s), interpretation and written report

**KEY MPC COMPARISON CODES:**

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

| <u>MPC CPT Code 1</u> | <u>Global</u> | <u>Work RVU</u> | <u>Time Source</u> | <u>Most Recent Medicare Utilization</u> |
|-----------------------|---------------|-----------------|--------------------|-----------------------------------------|
| 97110                 | XXX           | 0.45            | RUC Time           | 42,096,399                              |

CPT Descriptor 1 Therapeutic procedure, 1 or more areas, each 15 minutes; therapeutic exercises to develop strength and endurance, range of motion and flexibility

| <u>MPC CPT Code 2</u> | <u>Global</u> | <u>Work RVU</u> | <u>Time Source</u> | <u>Most Recent Medicare Utilization</u> |
|-----------------------|---------------|-----------------|--------------------|-----------------------------------------|
| 93016                 | XXX           | 0.45            | RUC Time           | 1,112,086                               |

CPT Descriptor 2 Cardiovascular stress test using maximal or submaximal treadmill or bicycle exercise, continuous electrocardiographic monitoring, and/or pharmacological stress; physician supervision only, without interpretation and report

| <u>Other Reference CPT Code</u> | <u>Global</u> | <u>Work RVU</u> | <u>Time Source</u> |
|---------------------------------|---------------|-----------------|--------------------|
| 88388                           | XXX           | 0.45            | RUC Time           |

CPT Descriptor Macroscopic examination, dissection, and preparation of tissue for non-microscopic analytical studies (eg, nucleic acid-based molecular studies); in conjunction with a touch imprint, intraoperative consultation, or frozen section, each tissue preparation (eg, a single lymph node) (List separately in addition to code for primary procedure)

**RELATIONSHIP OF CODE BEING REVIEWED TO KEY REFERENCE SERVICE(S):**

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by the mean) of the service you are rating to the key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Key Reference Code: 3      % of respondents: 33.3 %

**TIME ESTIMATES (Median)**

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert panel reviewed the survey data and agreed that the survey respondents overestimated the physician work, but not the time involved. The expert panel agreed with the survey respondent's median time of 15 minutes for this service, as the typical time required. The expert panel assimilated the overall physician work with that of recently RUC reviewed service 88388 (Work RVU = 0.45, 12 minutes). CAP recommends a direct crosswalk of 81380 to the physician work of 88388 (Work RVU = 0.45) and a total time of 15 minutes for CPT code 81380.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The molecular stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pathology                      How often? Rarely

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

|-----------|-----------|------------|---|

Do many physicians perform this service across the United States?

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 88291

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 81381      Tracking Number   Z50

Original Specialty Recommended RVU: **0.45**Presented Recommended RVU: **0.45**

Global Period: XXX

RUC Recommended RVU: **0.45**

CPT Descriptor: HLA Class I typing, high resolution (ie, alleles or allele groups); one allele or allele group (eg, B\*57:01P), each

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: An antiretroviral regimen including the drug abacavir is planned for a 35-year-old man with a diagnosis of HIV-1. Prior to beginning abacavir treatment, a sample of anticoagulated peripheral blood is submitted to the laboratory for HLA-B\*57:01 allele testing.

Percentage of Survey Respondents who found Vignette to be Typical: 91%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: None

Description of Intra-Service Work: High quality genomic DNA is isolated from whole blood. The genomic region containing the HLA-B locus is amplified by PCR, and the amplicons are interrogated in hybridization reactions with 100 oligonucleotide probes immobilized on fluorescent microscopic beads. Fluorescence is then assessed in a fluorescent bead array assay. The pathologist examines the fluorescent intensities seen with each probe and determines the status of the HLA-B\*57 allele group with the assistance of computer software. Testing with additional probes to distinguish HLA-B\*57:01 from other B\*57 alleles is performed if necessary. Based on these analyses, the pathologist determines the status of the HLA-B\*57:01 allele. The pathologist composes a report which specifies the patient's HLA-B\*57:01 allele status. The report is edited, signed and the results are communicated to appropriate caregivers.

Description of Post-Service Work: None

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUR analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert panel reviewed the survey data and agreed that the survey respondents overestimated the physician work and underestimated the time required. The expert panel assimilated the overall physician work with that of recently RUC reviewed service 88388 (Work RVU = 0.45, 12 minutes). CAP recommends a direct crosswalk of 81381 to the physician work and time of CPT code 88388.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The molecular stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pathology                      How often? Rarely

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,000  
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate.

Do many physicians perform this service across the United States?

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 88291

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code:81382      Tracking Number    Z51

Original Specialty Recommended RVU: **0.45**Presented Recommended RVU: **0.45**

Global Period: XXX

RUC Recommended RVU: **0.45**

CPT Descriptor: HLA Class II typing, high resolution (ie, alleles or allele groups); one locus (eg, HLA-DRB1, -DRB3, -DRB4, -DRB5, -DQB1, -DQA1, -DPB1, or -DPA1), each

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 45-year-old man with acute myelogenous leukemia with unfavorable cytogenetics is in his first remission. The patient will require a hematopoietic stem cell transplant and has no siblings. In addition to high resolution HLA-A, -B, -C and DRB1 testing, the physician requests that HLA-DQB1 be included in the search for an HLA matched donor through the National Marrow Donor Program. A sample of anticoagulated peripheral blood is submitted to the laboratory for HLA-DQB1 allele typing.

Percentage of Survey Respondents who found Vignette to be Typical: 91%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: None

Description of Intra-Service Work: High quality genomic DNA is isolated from whole blood. The genomic region containing the HLA Class II gene is amplified by PCR using locus specific primers. The PCR products are sequenced with a series of forward and reverse primers. The pathologist evaluates the DNA sequences obtained, assesses their alignment against a consensus sequence and compares results against a database of all known alleles with the assistance of computer software. Ambiguities are resolved using sequence specific primers.. Based on these analyses, the pathologist assigns an HLA type at the allele level. The pathologist composes a report which specifies the patient's HLA-DQB1 alleles. The report is edited, signed and the results are communicated to appropriate caregivers.

Description of Post-Service Work: None

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUR analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert panel reviewed the survey data and agreed that the survey respondents overestimated the physician work but not the time required. The expert panel agrees with the median survey time of 15 minutes as the typical time required to provide this service. The expert panel assimilated the overall physician work with that of recently RUC reviewed service 88388 (Work RVU = 0.45, 12 minutes). CAP recommends a direct crosswalk of 81382 to the physician work of 88388 of 0.45 Work RVUs and total time of 15 minutes for CPT code 81382.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The molecular stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pathology                      How often? Rarely

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

|           |           |            |   |

Do many physicians perform this service across the United States?

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 88291

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code:81383      Tracking Number   Z52

Original Specialty Recommended RVU: **0.45**Presented Recommended RVU: **0.45**

Global Period: XXX

RUC Recommended RVU: **0.45**

CPT Descriptor: HLA Class II typing, high resolution (ie, alleles or allele groups); one allele or allele group (eg, HLA-DQB1\*06:02P), each

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 30-year-old woman describes excessive daytime sleepiness over the past two months and a recent single episode of transient weakness resulting in her collapse to the floor while discussing a family member's recent death. The results of a polysomnogram and a multiple sleep latency test are indeterminate in helping reach a diagnosis of narcolepsy. A sample of anticoagulated peripheral blood is submitted to the laboratory for HLA-DQB1\*06:02 allele identification.

Percentage of Survey Respondents who found Vignette to be Typical: 91%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: None

Description of Intra-Service Work: High quality genomic DNA is isolated from whole blood. The genomic region containing the HLA-DQB1 locus is PCR amplified using sets of sequence specific primers to detect HLA-DQB1\*06 group alleles and to distinguish among DQB1\*06 alleles. The amplicons produced are separated by size via gel electrophoresis. The pathologist examines the digitized images or photographs of the ethidium bromide stained gels to assess the presence or absence of amplicons produced for the specific reactions in comparison to positive and negative controls. Based on the manual analysis of the amplicon patterns and with the assistance of computer software, the pathologist determines whether the HLA-DQB1\*06:02 allele is present. The pathologist composes a report which specifies the patient's HLA-DQB1\*06:02 allele status. The report is edited, signed and the results are communicated to appropriate caregivers.

Description of Post-Service Work: None

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUR analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert panel reviewed the survey data and agreed that the survey respondents overestimated the physician work and time. The expert panel assimilated the overall physician work with that of recently RUC reviewed service 88388 (Work RVU = 0.45, 12 minutes). CAP recommends a Work RVU crosswalk of 81383 to the physician work of CPT code 88388 and the intra-service median survey time of 15 minutes total.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The molecular stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pathology                      How often? Rarely

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,000  
 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate.

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|

Do many physicians perform this service across the United States?

### Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 88291

**AMA/Specialty Society Update Process  
Practice Expense Summary of Recommendation  
Non Facility Direct Inputs**

59 New Molecular Pathology Services

Global Period: \_XXX Meeting Date: \_September 2011

Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

**TAB 5** – All practice expenses were cross-walked to already reviewed Tier 2 codes (April 2011), except for the HLA code set where CAP surveyed several large and small labs throughout the United States. Survey responses were compiled; questions and clarifications were followed up with lab managers and directors. CAP's expert panel reviewed compiled PE inputs and made adjustments to the clinical labor, supplies, and equipment for all codes.

**TAB 9** – All practice expenses were cross-walked to already reviewed Tier 2 codes (April 2011).

If you have provided any comparison practice expense inputs on your spreadsheet, please provide a rationale for the selection of codes. Comparison Code Rationale:

Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

Molecular DNA analyses based on specific code.

Intra-Service Clinical Labor Activities:

NONE

Post-Service Clinical Labor Activities:

Clean up, document filing, and other activities, see spreadsheet

## AMA/Specialty Society RVS Update Committee Summary of Recommendations

September 2011

### **Molecular Pathology Test-Tier 2**

In response to payer requests, the CPT Editorial Panel developed a new coding structure to describe molecular pathology services, based on the efforts and recommendations of the Molecular Pathology Coding Workgroup convened beginning in October 2009. In October 2010, the Panel accepted 9 Tier 2 codes, which are a list of codes to be reported when the service is not listed in the Tier 1 codes. The Tier 2 codes are arranged by the level of technical resources and interpretive professional work required. The RUC understands that these services will be rarely reported and represent tests that are established and well developed, however their low volume does not warrant characterization as Tier 1 and unlikely to be automated at this time. If increases, the RUC understands that the test will be assigned a Tier 1 code. These services were previously reported with a series of “stacking codes.” The RUC understands that payment for these services is currently based on a mixture of payment methodologies, including the physician fee schedule and the clinical lab fee schedule. CMS has requested that the RUC review data provided by the College of American Pathologists to provide the agency with more information as a policy is developed to determine which payment schedule is appropriate for these services.

In April 2011, the RUC found it difficult to appropriately assign a physician work valuation to these services. The number of survey respondents for each code ranged from 11 to 26, all below the RUC’s required minimum of thirty respondents. The recommendations submitted by the specialty did not reflect appropriate valuation given the corresponding time recommendations. The RUC proposed interim recommendations and the specialty society re-surveyed for the September 2011 RUC Meeting. For the September 2011 RUC meeting, the specialty society was able to garner a significantly higher response rate and thus the RUC has considerable confidence in their survey data for the following Molecular Pathology Tier 2 Tests.

#### **81400 Molecular pathology procedure, Level 1 (eg, identification of single germline variant [eg, SNP] by techniques such as restriction enzyme digestion or melt curve analysis)**

The RUC reviewed the specialty’s survey data from 94 molecular pathologists who provide these services. The survey results indicated a median physician time for 81400 of 10 minutes and a work value of 0.37. The RUC agreed that the median time accurately reflects the amount of time required to perform the service. The RUC compared 81400 to the key reference code 86320 *Immunoelectrophoresis; serum* (work RVU = 0.37) and agreed that the reference code requires more time to perform than the surveyed code, 17 minutes and 10 minutes, respectively. The RUC also compared this service to 93784 *Ambulatory blood pressure monitoring, utilizing a system such as magnetic tape and/or computer disk, for 24 hours or longer; including recording, scanning analysis, interpretation and report* (intra-time=15 minutes, work RVU=0.38), and noted that the

surveyed code requires less time to perform than this reference code. **Based on these comparisons, the RUC recommends a work RVU of 0.32, the survey's 25<sup>th</sup> percentile, for CPT code 81400.**

**81401 Molecular pathology procedure, Level 2 (eg, 2-10 SNPs, 1 methylated variant, or 1 somatic variant [typically using nonsequencing target variant analysis], or detection of a dynamic mutation disorder/triplet repeat)**

The RUC reviewed the specialty society's survey data from 59 molecular pathologists who provide these services. The survey data resulted in a median physician time for 81401 of 15 minutes and a work RVU of 0.50. The RUC agreed that this time accurately reflects the amount of time required to perform the service. The RUC compared 81401 to the key reference code 88291 *Cytogenetics and molecular cytogenetics, interpretation and report* (work RVU = 0.52) and agreed that the reference code requires more time to perform than the surveyed code, 20 minutes and 15 minutes, respectively. Further, the RUC noted that the key reference code is a more intense service to perform as compared to the reference code. The RUC also compared this service to 93784 *Ambulatory blood pressure monitoring, utilizing a system such as magnetic tape and/or computer disk, for 24 hours or longer; including recording, scanning analysis, interpretation and report* (intra-time=15 minutes, work RVU=0.38), and noted that the surveyed code requires similar physician time to perform as compared to this reference code. **Based on these comparisons, the RUC recommends a work RVU of 0.40, the survey's 25<sup>th</sup> percentile, for CPT code 81401.**

**81402 Molecular pathology procedure, Level 3 (eg, >10 SNPs, 2-10 methylated variants, or 2-10 somatic variants [typically using non-sequencing target variant analysis], immunoglobulin and T-cell receptor gene rearrangements, duplication/deletion variants 1 exon)**

The RUC reviewed the specialty society's survey data from 61 molecular pathologists who provide these services. The survey data resulted in a median physician time for 81402 of 20 minutes and a work RVU of 0.52. The RUC agreed that this time accurately reflects the amount of time required to perform the service. The RUC compared 81402 to the key reference code 88291 *Cytogenetics and molecular cytogenetics, interpretation and report* (work RVU = 0.52) and agreed that the reference code requires the same time to provide as compared to the surveyed code, 20 minutes. The RUC also compared this service to 93784 *Ambulatory blood pressure monitoring, utilizing a system such as magnetic tape and/or computer disk, for 24 hours or longer; including recording, scanning analysis, interpretation and report* (intra-time=15 minutes, work RVU=0.38), and noted that the surveyed code requires more time to perform as compared to this reference code. **Based on these comparisons, the RUC recommends a work RVU of 0.50, the survey's 25<sup>th</sup> percentile, for CPT code 81402.**

**81403 Molecular pathology procedure, Level 4 (eg, analysis of single exon by DNA sequence analysis, analysis of >10 amplicons using multiplex PCR in 2 or more independent reactions, mutation scanning or duplication/deletion variants of 2-5 exons)**

The RUC reviewed the specialty society's survey data from 47 molecular pathologists who provide these services. The survey data indicated a median time for 81403 of 28 minutes with a median physician work RVU of 0.77. The RUC agreed that this time accurately reflects the amount of time required to perform the service. The RUC compared 81403 to the key reference code 88291 *Cytogenetics and molecular cytogenetics, interpretation and report* (work RVU = 0.52) and agreed that the reference code requires less time to perform as compared to the surveyed code, 20 minutes and 28 minutes, respectively. However, the specialty acknowledged, and the RUC agreed, that although the surveyed code requires

more time to perform as compared to the reference code, they are similarly intense services. The RUC also compared this service to 95251 *Ambulatory continuous glucose monitoring of interstitial tissue fluid via a subcutaneous sensor for a minimum of 72 hours; interpretation and report* (intra-time=30 minutes, work RVU=0.85), and noted that the surveyed code requires less time and is a less intense service to perform as compared to this reference code. **Based on these comparisons, the RUC recommends a work RVU of 0.52, the survey's 25<sup>th</sup> percentile, for CPT code 81403.**

**81404 Molecular pathology procedure, Level 5 (eg, analysis of 2-5 exons by DNA sequence analysis, mutation scanning or duplication/deletion variants of 6-10 exons, or characterization of a dynamic mutation disorder/triplet repeat by Southern blot analysis)**

The RUC reviewed the specialty society's survey data from 49 molecular pathologist who provide these services. The survey data indicated a median time for 81404 of 30 minutes with a median physician work RVU of 0.83. The RUC agreed that this time accurately reflects the amount of time required to perform the service. The RUC compared 81404 to the key reference code 88291 *Cytogenetics and molecular cytogenetics, interpretation and report* (work RVU = 0.52) and agreed that the reference code requires less time to perform as compared to the surveyed code, 20 minutes and 30 minutes, respectively. Further, the specialty acknowledged, and the RUC agreed, that the surveyed code is a more intense service to perform in comparison to the reference code. The RUC also compared this service to 86077 *Blood bank physician services; difficult cross match and/or evaluation of irregular antibody(s), interpretation and written report* (Work RVU=0.94) and noted that the reference code requires more time to perform in comparison to the surveyed code, 40 minutes and 30 minutes, respectively. **Based on these comparisons, the RUC recommends a work RVU of 0.65, the survey's 25<sup>th</sup> percentile, for CPT code 81404.**

**81405 Molecular pathology procedure, Level 6 (eg, analysis of 6-10 exons by DNA sequence analysis, mutation scanning or duplication/deletion variants of 11-25 exons)**

The RUC reviewed the specialty's survey data from 31 molecular pathologists who provide these services. The survey data indicated a median time for 81405 of 30 minutes with a median physician work RVU of 0.94.. The RUC agreed that this time accurately reflects the amount of time required to perform the service. The RUC compared 81403 to the key reference code 88112 *Cytopathology, selective cellular enhancement technique with interpretation (eg, liquid based slide preparation method), except cervical or vaginal* (work RVU = 1.18) and agreed that the reference code requires more time to perform as compared to the surveyed code, 43 minutes and 30 minutes, respectively. The RUC also compared this service to 86077 *Blood bank physician services; difficult cross match and/or evaluation of irregular antibody(s), interpretation and written report* (Work RVU=0.94) and noted that the reference code requires more time to perform in comparison to the surveyed code, 40 minutes and 30 minutes, respectively. **Based on these comparisons, the RUC recommends a work RVU of 0.80, the survey's 25<sup>th</sup> percentile, for CPT code 81405.**

**81406 Molecular pathology procedure, Level 7 (eg, analysis of 11-25 exons by DNA sequence analysis, mutation scanning or duplication/deletion variants of 26-50 exons, cytogenomic array analysis for neoplasia)**

The RUC reviewed the survey data as presented by the specialty society which indicated that the median time for 81406 was 60 minutes, with a median work RVU of 1.40. The RUC agreed that this time accurately reflects the amount of time required to perform the service. The RUC

compared 81406 to the key reference code 88323 *Consultation and report on referred material requiring preparation of slides* (work RVU = 1.83) and agreed that the reference code requires similar time to perform as compared to the surveyed code, 56 minutes and 60 minutes, respectively. However, the specialty acknowledged and the RUC agreed that although the surveyed code requires similar time to perform as compared to the reference code, the reference code is a more intense service to perform in comparison to the surveyed code. The RUC also compared this service to 92626 *Evaluation of auditory rehabilitation status; first hour* (intra-time=60 minutes, work RVU=1.40), and noted that the surveyed code requires the same time and is a similarly intense service to perform as compared to this reference code. **Based on these comparisons, the RUC recommends a work RVU of 1.40, the survey's median, for CPT code 81406.**

**81407 Molecular pathology procedure, Level 8 (eg, analysis of 26-50 exons by DNA sequence analysis, mutation scanning or duplication/deletion variants of >50 exons, sequence analysis of multiple genes on one platform)**

The RUC reviewed the survey data as presented by the specialty society which indicated that the median time for 81406 was 60 minutes, with a median work RVU of 1.85. The RUC agreed that this time accurately reflects the amount of time required to perform the service. The RUC compared 81407 to the key reference code 88309 *Level VI - Surgical pathology, gross and microscopic examination* (work RVU = 2.80) and agreed that the reference code requires more time to perform as compared to the surveyed code, 90 minutes and 60 minutes, respectively. The RUC also compared this service to 96118 *Neuropsychological testing (eg, Halstead-Reitan Neuropsychological Battery, Wechsler Memory Scales and Wisconsin Card Sorting Test), per hour of the psychologist's or physician's time, both face-to-face time administering tests to the patient and time interpreting these test results and preparing the report* (Work RVU=1.86) and noted that this reference code requires the same time to perform in comparison to the surveyed code, 60 minutes. **Based on these comparisons, the RUC recommends a work RVU of 1.85, the survey's median percentile, for CPT code 81407.**

**81408 Molecular pathology procedure, Level 9 (eg, analysis of >50 exons in a single gene by DNA sequence analysis)**

The RUC reviewed the survey data as presented by the specialty society which indicated that the median time for 81408 was 80 minutes, with a median work RVU of 2.80. The RUC agreed that this time accurately reflects the amount of time required to perform the service. The RUC compared 81408 to the key reference code 88309 *Level VI - Surgical pathology, gross and microscopic examination* (work RVU = 2.80) and agreed that the reference code requires more time to perform as compared to the surveyed code, 90 minutes and 80 minutes, respectively. The RUC also compared this service to 88325 *Consultation, comprehensive, with review of records and specimens, with report on referred material* (Work RVU=2.50) and noted that this reference code requires the same time to perform in comparison to the surveyed code, 80 minutes. **Based on these comparisons, the RUC recommends a work RVU of 2.35, the survey's 25<sup>th</sup> percentile, for CPT code 81408.**

**Practice Expense**

The practice expense inputs for these services were approved at the April 2011 RUC meeting and forwarded to CMS in May 2011.

**Work Neutrality**

Reviewing the Medicare utilization data for 83912 *Molecular diagnostics; interpretation and report* (work RVU = 0.37) and the specialty's estimate of utilization of these individual services, the RUC understands that these recommendations will be work neutral to the family.

### **New Technology**

The entire set of molecular pathology codes should be re-reviewed after claims data are available and there is experience with the new coding system. The time, work valuation, and practice expense inputs should all be reviewed again in the future as these estimates are based on a good faith effort using available information in 2011.

| CPT Code<br>(●New)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Track-<br>ing<br>Num-<br>ber | CPT Descriptor | Global<br>Period | Work RVU<br>Recom-<br>mendation |

| <b>Pathology and Laboratory</b><br><b><u>Molecular Pathology</u></b><br><u>The following Molecular Pathology Procedure (Tier 2) codes are used to report procedures not listed in the Tier 1 molecular pathology codes (AXXX1-UXXX1). They represent medically useful procedures that are generally performed in lower volumes than Tier 1 procedures (eg, the incidence of the disease being tested is rare). They are arranged by level of technical resources and interpretive work by the physician.. The individual analyses listed under each code (ie, level of procedure) utilize the definitions and coding principles as described in the introduction preceding the Tier 1 molecular pathology codes. The parenthetical examples of methodologies presented near the beginning of each code provide general guidelines used to group procedures for a given level and are not all-inclusive.</u><br><u>Use the appropriate molecular pathology procedure level code that includes the specific analyte listed after the code descriptor. If the analyte tested is not listed under one of the Tier 2 codes or is not represented by a Tier 1 code, use the appropriate methodology codes in the 83890-83914 and 88384-88386 series.</u> |                              |                |                  |                                 |

|           |     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |     |      |

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 81401      Tracking Number   AA2

Original Specialty Recommended RVU: **0.40**Presented Recommended RVU: **0.40**

Global Period: XXX

RUC Recommended RVU: **0.40**

CPT Descriptor: Molecular pathology procedure, Level 2 (eg, 2-10 SNPs, 1 methylated variant, or 1 somatic variant [typically using nonsequencing target variant analysis], or detection of a dynamic mutation disorder/triplet repeat) CCND1/ IGH (BCL1/ IGH, t[(11;14)d] (eg, mantle cell lymphoma) translocation analysis, major breakpoint, qualitative, and quantitative, if performed

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 30-year-old asymptomatic man with a family history of Huntington disease presents to his physician for predictive genetic testing for Huntington disease. A sample of anticoagulated peripheral blood is submitted for HTT mutation testing.

Percentage of Survey Respondents who found Vignette to be Typical: 85%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Kept overnight (less than 24 hours) 0% , Admitted (more than 24 hours) 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Is moderate sedation inherent in your reference code (Office setting)?

Is moderate sedation inherent in your reference code (Hospital/ASC setting)?

**Description of Pre-Service Work:**

Description of Intra-Service Work: High quality genomic DNA is isolated from whole blood and subjected to PCR amplification for the CACNA1C gene exon which contains the known familial mutation. The PCR products undergo bidirectional dideoxynucleotide chain termination sequencing using capillary electrophoresis. The pathologist evaluates the sequencing electropherograms for the known familial mutation and any other variants that may be present. The pathologist composes a report which specifies the patient's mutation status. The report is edited, signed and the results are communicated to appropriate caregivers.

**Description of Post-Service Work:**

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert panel reviewed the survey data and compared the physician work of the new code to the key reference code 88291 (Work RVU = 0.52, 20 minutes total time). The expert panel agreed that considering the robust survey results, the median physician time of 15 minutes was typical, and the 25<sup>th</sup> percentile work RVU of 0.40 appropriately values 81401.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) Stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of code 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty College of American Pathologists

How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 0

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

|           |             |                   |
|-----------|-------------|-------------------|
| Specialty | Frequency 0 | Percentage 0.00 % |
|-----------|-------------|-------------------|

|           |             |                   |
|-----------|-------------|-------------------|
| Specialty | Frequency 0 | Percentage 0.00 % |
|-----------|-------------|-------------------|

|           |             |                   |
|-----------|-------------|-------------------|
| Specialty | Frequency 0 | Percentage 0.00 % |
|-----------|-------------|-------------------|

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 2,000  
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate.

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 88291

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 81400      Tracking Number   AA1

Original Specialty Recommended RVU: **0.32**Presented Recommended RVU: **0.32**

Global Period: XXX

RUC Recommended RVU: **0.32**

CPT Descriptor: Molecular pathology procedure, Level 1 (eg, identification of single germline variant [eg, SNP] by techniques such as restriction enzyme digestion or melt curve analysis)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: An asymptomatic newborn girl of Northern European descent is suspected to have medium chain acyl dehydrogenase deficiency (MCAD) on the basis of newborn screening. A sample of anticoagulated peripheral blood is submitted for genetic testing for the common ACADM gene K304E variant.

Percentage of Survey Respondents who found Vignette to be Typical: 85%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Kept overnight (less than 24 hours) 0% , Admitted (more than 24 hours) 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Is moderate sedation inherent in your reference code (Office setting)?

Is moderate sedation inherent in your reference code (Hospital/ASC setting)?

Description of Pre-Service Work: n/a

Description of Intra-Service Work: High quality genomic DNA is isolated. The genomic region containing the site of the K304E variant is amplified by PCR using primers that in the presence of the K304E variant, introduce an additional restriction endonuclease site into the amplicon. The PCR products undergo digestion with a restriction endonuclease, and the resulting fragments are separated using gel electrophoresis. The pathologist evaluates the patterns of the digestion fragments in relation to marker and control lanes to determine the patient's mutation and zygosity status. The pathologist composes a report which specifies the patient's mutation and zygosity status. The report is edited, signed and the results are communicated to appropriate caregivers.

Description of Post-Service Work: n/a

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert panel reviewed the survey data and compared the physician work of the new code to the key reference code 86320 (Work RVU = 0.37, 17 minutes total time). The expert panel agreed that considering the robust survey results, the median physician time of 10 minutes was typical, and compared to the key reference service the 25<sup>th</sup> percentile work RVU of 0.32 appropriately values 81400.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) Stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty College of American Pathologists

How often? Sometimes

Specialty

How often?

Specialty

How often?

Estimate the number of times this service might be provided nationally in a one-year period? 0

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

|           |             |                   |
|-----------|-------------|-------------------|
| Specialty | Frequency 0 | Percentage 0.00 % |
|-----------|-------------|-------------------|

|           |             |                   |
|-----------|-------------|-------------------|
| Specialty | Frequency 0 | Percentage 0.00 % |
|-----------|-------------|-------------------|

|           |             |                   |
|-----------|-------------|-------------------|
| Specialty | Frequency 0 | Percentage 0.00 % |
|-----------|-------------|-------------------|

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 2,000

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate.

|           |             |                   |
|-----------|-------------|-------------------|
| Specialty | Frequency 0 | Percentage 0.00 % |
| Specialty | Frequency 0 | Percentage 0.00 % |
| Specialty | Frequency 0 | Percentage 0.00 % |

Do many physicians perform this service across the United States? Yes

---

### Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 88291

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 81402      Tracking Number   AA3

Original Specialty Recommended RVU: **0.50**Presented Recommended RVU: **0.50**

Global Period: XXX

RUC Recommended RVU: **0.50**

CPT Descriptor: Molecular pathology procedure, Level 3 (eg, >10 SNPs, 2-10 methylated variants, or 2-10 somatic variants [typically using non-sequencing target variant analysis], immunoglobulin and T-cell receptor gene rearrangements, duplication/deletion variants 1 exon)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 14-year-old girl of Turkish descent is seen by her physician for her third episode of fever accompanied by pleuritic chest pain, abdominal discomfort, and pain in the lower extremity joints. Her physical examination demonstrates a temperature of 38.5°C and dullness to percussion at the left lung base. Her abdomen is rigid with apparent rebound tenderness and diminished bowel sounds, and her left knee is warm and swollen with pain upon passive motion. Her white blood count, erythrocyte sedimentation rate and fibrinogen level are elevated. Familial Mediterranean fever is suspected, and a sample of anticoagulated peripheral blood is submitted for genetic testing for common variants in the MEFV gene.

Percentage of Survey Respondents who found Vignette to be Typical: 66%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Kept overnight (less than 24 hours) 0% , Admitted (more than 24 hours) 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Is moderate sedation inherent in your reference code (Office setting)?

Is moderate sedation inherent in your reference code (Hospital/ASC setting)?

Description of Pre-Service Work: n/a

Description of Intra-Service Work: High quality genomic DNA is isolated and subjected to multiplex PCR. Following exonuclease I and shrimp alkaline phosphatase treatment, a second reaction using allele specific primer extension (ASPE) amplifies either the normal or mutant allele sequences for 11 common MEFV variants. The fluorescently-tagged PCR products are separated by capillary electrophoresis. The pathologist evaluates the electropherogram comparing the relative sizes and peak heights of the PCR products to determine mutation and zygosity status. The pathologist composes a report which specifies the patient's mutation status. The report is edited, signed and the results are communicated to appropriate caregivers.

Description of Post-Service Work: n/a

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUR analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert committee reviewed the survey data and compared it to the key reference code 88291 (Work RVU = 0.52, 20 minutes). The expert panel agreed that the median physician time of 20 minutes is typical and compared to the key reference service, the 25<sup>th</sup> percentile work RVU of 0.50 appropriately values 81402.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The molecular stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty College of American Pathologists

How often? Sometimes

Specialty

How often?

Specialty

How often?

Estimate the number of times this service might be provided nationally in a one-year period? 0

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|

|           |             |                   |
|-----------|-------------|-------------------|
| Specialty | Frequency 0 | Percentage 0.00 % |
|-----------|-------------|-------------------|

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 2,000  
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate.

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
| Specialty | Frequency | Percentage | % |
| Specialty | Frequency | Percentage | % |

Do many physicians perform this service across the United States? Yes

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 88182

## AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS SUMMARY OF RECOMMENDATION

CPT Code: 81403      Tracking Number   AA4

Original Specialty Recommended RVU: **0.52**Presented Recommended RVU: **0.52**

Global Period: XXX

RUC Recommended RVU: **0.52**

CPT Descriptor: Molecular pathology procedure, Level 4 (eg, analysis of single exon by DNA sequence analysis, analysis of >10 amplicons using multiplex PCR in 2 or more independent reactions, mutation scanning or duplication/deletion variants of 2-5 exons)

### CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 72-year-old man with chronic myelogenous leukemia (CML) of several years duration on maintenance therapy with imatinib mesylate, experiences a greater than 1 log increase in his BCR/ABL1 transcript levels on repeat measurements. He reports adherence to his therapeutic regimen, and his imatinib level was found to be within the therapeutic range. Because of an apparent loss of response to imatinib, a sample of anticoagulated peripheral blood is submitted for ABL1 tyrosine kinase domain sequencing to assess for imatinib resistance mutations.

Percentage of Survey Respondents who found Vignette to be Typical: 89%

### Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Kept overnight (less than 24 hours) 0% , Admitted (more than 24 hours) 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

### Moderate Sedation

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Is moderate sedation inherent in your reference code (Office setting)?

Is moderate sedation inherent in your reference code (Hospital/ASC setting)?

Description of Pre-Service Work: n/a

Description of Intra-Service Work: High quality total cellular RNA is isolated and stored under RNase-free conditions. Reverse transcriptase is used to convert RNA to cDNA. PCR amplification using primers for the BCR/ABL1 major breakpoint translocation is performed, followed by nested PCR amplification using internal primers flanking the tyrosine kinase domain region. The nested PCR products undergo bidirectional dideoxynucleotide chain termination sequencing using a capillary electrophoresis instrument. The pathologist evaluates the sequencing electropherograms for potential nucleotide sequence variants. The pathologist compares this evaluation with possible variations suggested by computer software to ensure that all abnormalities are identified. The pathologist composes a report specifying the patient's ABL1 kinase domain mutation status. The report is edited, signed and the results are communicated to appropriate caregivers.

Description of Post-Service Work: n/a

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert committee reviewed the survey data and compared it to the key reference code 88291 (Work RVU = 0.52, 20 minutes). The survey respondents indicated code 81403 was less intense and complex than 88291 however it typically took more time. The overall work effort was therefore similar to 88291. The expert panel agreed that the median physician time of 28 minutes is typical and compared to the key reference service, the 25<sup>th</sup> percentile work RVU of 0.52 appropriately values 81403.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The molecular stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Do many physicians perform this service across the United States? Yes

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 88182

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 81404      Tracking Number   AA5

Original Specialty Recommended RVU: **0.65**Presented Recommended RVU: **0.65**

Global Period: XXX

RUC Recommended RVU: **0.65**

CPT Descriptor: Molecular pathology procedure, Level 5 (eg, analysis of 2-5 exons by DNA sequence analysis, mutation scanning or duplication/deletion variants of 6-10 exons, or characterization of a dynamic mutation disorder/triplet repeat by Southern blot analysis)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 30-year-old woman who has relatives with head and neck paragangliomas presents to her physician complaining of an enlarging, otherwise asymptomatic right-sided neck mass. Imaging studies suggest a carotid body paraganglioma. The patient is referred to a surgeon, who suspects a hereditary paraganglioma-pheochromocytoma syndrome. An anticoagulated peripheral blood sample is submitted for SDHD gene sequencing.

Percentage of Survey Respondents who found Vignette to be Typical: 69%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Kept overnight (less than 24 hours) 0% , Admitted (more than 24 hours) 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Is moderate sedation inherent in your reference code (Office setting)?

Is moderate sedation inherent in your reference code (Hospital/ASC setting)?

Description of Pre-Service Work: n/a

Description of Intra-Service Work: High quality genomic DNA is isolated from whole blood and subjected to 4 individual PCR amplification reactions. The PCR products from each reaction undergo bidirectional dideoxynucleotide chain termination sequencing using a capillary electrophoresis instrument. The pathologist evaluates the sequencing electropherograms for potential nucleotide sequence variants, insertions, deletions or other changes. The pathologist compares this evaluation with possible variations suggested by computer software to ensure that all abnormalities are identified. The pathologist composes a report specifying the patient's mutation status. The report is edited, signed and the results are communicated to appropriate caregivers.

Description of Post-Service Work: n/a

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert committee reviewed the survey data and compared it to the key reference code 88291 (Work RVU = 0.52, 20 minutes). The survey respondents indicated code 81404 is greater or as intense and complex as

88291 and it typically takes more time. Therefore, it was clear that there is more overall work in 81404 than in 88291. The expert panel agreed that the median physician time of 30 minutes is typical and compared to the key reference service, the 25<sup>th</sup> percentile work RVU of 0.65 appropriately values 81404.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The molecular stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty College of American Pathologists

How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
| Specialty | Frequency | Percentage | % |
| Specialty | Frequency | Percentage | % |

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 2,000

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate.

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
| Specialty | Frequency | Percentage | % |
| Specialty | Frequency | Percentage | % |

Do many physicians perform this service across the United States? Yes

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 88182

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 81405      Tracking Number   AA6

Original Specialty Recommended RVU: **0.80**Presented Recommended RVU: **0.80**

Global Period: XXX

RUC Recommended RVU: **0.80**

CPT Descriptor: Molecular pathology procedure, Level 6 (eg, analysis of 6-10 exons by DNA sequence analysis, mutation scanning or duplication/deletion variants of 11-25 exons)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 30-year-old woman with a family history that includes several relatives with chromaffin tumors presents to her physician complaining of episodic headaches, palpitations, sweating, and anxiety. Plasma metanephrines are elevated, and an MRI reveals a mass in the region of the organ of Zuckerkandl, that upon resection is confirmed to be a paraganglioma. A hereditary paraganglioma-pheochromocytoma syndrome is suspected, and an anticoagulated peripheral blood sample is submitted for SDHB gene sequencing.

Percentage of Survey Respondents who found Vignette to be Typical: 90%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Kept overnight (less than 24 hours) 0% , Admitted (more than 24 hours) 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Is moderate sedation inherent in your reference code (Office setting)?

Is moderate sedation inherent in your reference code (Hospital/ASC setting)?

Description of Pre-Service Work: n/a

Description of Intra-Service Work: High quality genomic DNA is isolated from whole blood and subjected to 8 individual PCR amplification reactions. The PCR products from each reaction undergo bidirectional dideoxynucleotide chain termination sequencing using a capillary electrophoresis instrument. The pathologist evaluates the sequencing electropherograms for potential nucleotide sequence variants, insertions, deletions or other changes. The pathologist compares this evaluation with possible variations suggested by computer software to ensure that all abnormalities are identified. The pathologist composes a report specifying the patient's SDHB mutation status. The report is edited, signed and the results are communicated to appropriate caregivers.

Description of Post-Service Work: n/a

| Post-Service intensity/complexity  | 0.00 | 0.00 |

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert committee reviewed the survey data and compared it to the key reference code 88112 (Work RVU = 1.18, 43 minutes). The survey respondents indicated code 81405 is greater, or as intense and complex, as 88112 and it typically takes more time. The expert panel agreed with the survey respondents based on the fact that there are 11-25 exons to be reviewed. The expert panel agreed that the median physician time of 30 minutes is typical and compared to the key reference service, the 25<sup>th</sup> percentile work RVU of 0.80 appropriately values 81405.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The molecular stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty College of American Pathologists

How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
| Specialty | Frequency | Percentage | % |
| Specialty | Frequency | Percentage | % |

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 2,000  
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate.

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
| Specialty | Frequency | Percentage | % |
| Specialty | Frequency | Percentage | % |

Do many physicians perform this service across the United States? Yes

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 88182

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 81406      Tracking Number   AA7

Original Specialty Recommended RVU: **1.40**Presented Recommended RVU: **1.40**

Global Period: XXX

RUC Recommended RVU: **1.40**

CPT Descriptor: Molecular pathology procedure, Level 7 (eg, analysis of 11-25 exons by DNA sequence analysis, mutation scanning or duplication/deletion variants of 26-50 exons, cytogenomic array analysis for neoplasia)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 10-month-old infant of mixed Ashkenazi Jewish ancestry experiences progressive muscle weakness with a loss of motor skills, decreased attentiveness, and an increased startle response. His pediatrician suspects a diagnosis of Tay-Sachs disease, and the patient is tested for the common Ashkenazi Jewish HEXA gene variants. The patient is found to be heterozygous for the +TATC1278 variant, but no additional common mutations are detected. An anticoagulated peripheral blood sample is submitted for HEXA sequencing to assess the patient for the presence of a second HEXA mutation.

Percentage of Survey Respondents who found Vignette to be Typical: 81%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Kept overnight (less than 24 hours) 0% , Admitted (more than 24 hours) 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Is moderate sedation inherent in your reference code (Office setting)?

Is moderate sedation inherent in your reference code (Hospital/ASC setting)?

Description of Pre-Service Work: n/a

Description of Intra-Service Work: High quality genomic DNA is isolated from whole blood and subjected to 14 individual PCR amplification reactions. The PCR products from each reaction undergo bidirectional dideoxynucleotide chain termination sequencing using a capillary electrophoresis instrument. The pathologist evaluates the sequencing electropherograms for potential nucleotide sequence variants, insertions, deletions or other changes. The pathologist compares this evaluation with possible variations suggested by computer software to ensure that all abnormalities are identified. The pathologist composes a report specifying the patient's HEXA mutation status. The report is edited, signed and the results are communicated to appropriate caregivers.

Description of Post-Service Work: n/a

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert committee reviewed the survey data and compared it to the key reference code 88323 (Work RVU = 1.83, 56 minutes). The survey respondents indicated code 81406 is greater, or as intense and complex, as 88323 and it typically takes more time. All intensity and complexity measures indicated a high intensity and complexity. The expert panel agreed with the survey respondents based on the fact that there are 26-50 exons to be reviewed. The expert panel agreed that the median physician time of 60 minutes is typical and compared to the key reference service, the median work RVU of 1.40 appropriately values 81406.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The molecular stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty College of American Pathologists

How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

Do many physicians perform this service across the United States? Yes

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 88182

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 81407      Tracking Number   AA8

Original Specialty Recommended RVU: **1.85**Presented Recommended RVU: **1.85**

Global Period: XXX

RUC Recommended RVU: **1.85**

CPT Descriptor: Molecular pathology procedure, Level 8 (eg, analysis of 26-50 exons by DNA sequence analysis, mutation scanning or duplication/deletion variants of >50 exons, sequence analysis of multiple genes on one platform)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 10-month-old girl with a family history of epilepsy is taken to her pediatrician after experiencing a febrile seizure in association with a viral infection. An SCN1A-related seizure disorder is suspected. An anticoagulated peripheral blood sample is submitted for SCN1A sequencing to assess the patient for the presence of a SCN1A-related seizure disorder mutation.

Percentage of Survey Respondents who found Vignette to be Typical: 87%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital                      , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Kept overnight (less than 24 hours) 0% , Admitted (more than 24 hours) 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Is moderate sedation inherent in your reference code (Office setting)?

Is moderate sedation inherent in your reference code (Hospital/ASC setting)?

Description of Pre-Service Work: n/a

Description of Intra-Service Work: High quality genomic DNA is isolated from whole blood and subjected to 30 individual PCR amplification reactions. The PCR products from each reaction undergo bidirectional dideoxynucleotide chain termination sequencing using a capillary electrophoresis instrument. The pathologist evaluates the sequencing electropherograms for potential nucleotide sequence variants, insertions, deletions or other changes. The pathologist compares this evaluation with possible variations suggested by computer software to ensure that all abnormalities are identified. The pathologist composes a report specifying the patient's SCN1A mutation status. The report is edited, signed and the results are communicated to appropriate caregivers.

Description of Post-Service Work: n/a

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert committee reviewed the survey data and compared it to the key reference code 88309 (Work RVU = 2.80, 90 minutes). The survey respondents indicated code 81407 is greater, or as intense and complex as 88309 in 5 out of 9 measures. All intensity and complexity measures indicated a high intensity and complexity. The expert panel agreed with the survey respondents that 81407 is complex and intense. The expert panel agreed that the median physician time of 60 minutes is typical and compared to the key reference service, the median work RVU of 1.85 appropriately values 81407 within this family of Tier 2 services.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The molecular stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty College of American Pathologists

How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,000  
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate.

|           |           |            |   |

| Specialty | Frequency | Percentage | % |

Do many physicians perform this service across the United States? Yes

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 88182

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 81408      Tracking Number   AA9

Original Specialty Recommended RVU: **2.35**Presented Recommended RVU: **2.35**

Global Period: XXX

RUC Recommended RVU: **2.35**

CPT Descriptor: Molecular pathology procedure, Level 9 (eg, analysis of >50 exons in a single gene by DNA sequence analysis)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 16-month-old girl is found by her pediatrician to have mild axillary freckling and 2 large café-au-lait macules on routine physical examination. The history and physical examination is otherwise within normal limits. A diagnosis of neurofibromatosis is suspected. An anticoagulated peripheral blood sample is submitted for NF1 sequencing to assess the patient for the presence of a neurofibromatosis-related mutation.

Percentage of Survey Respondents who found Vignette to be Typical: 67%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Kept overnight (less than 24 hours) 0% , Admitted (more than 24 hours) 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Is moderate sedation inherent in your reference code (Office setting)?

Is moderate sedation inherent in your reference code (Hospital/ASC setting)?

Description of Pre-Service Work: n/a

Description of Intra-Service Work: High quality genomic DNA is isolated from whole blood and subjected to 58 individual PCR amplification reactions. The PCR products from each reaction undergo bidirectional dideoxynucleotide chain termination sequencing using a capillary electrophoresis instrument. The pathologist evaluates the sequencing electropherograms for potential nucleotide sequence variants, insertions, deletions or other changes. The pathologist compares this evaluation with possible variations suggested by computer software to ensure that all abnormalities are identified. The pathologist composes a report specifying the patient's NF1 mutation status. The report is edited, signed and the results are communicated to appropriate caregivers.

Description of Post-Service Work: n/a

CPT Descriptor 2 Inpatient consultation for a new or established patient, which requires these 3 key components: A detailed history; A detailed examination; and Medical decision making of low complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate severity. Physicians typically spend 55 minutes at the bedside and on the patient's hospital floor or unit.

|                                 |               |                 |                    |

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Following the survey, the data were reviewed by an expert panel that included CAP's relative value workgroup, CAP's RUC advisor, the American Society of Cytopathology (ASC) RUC advisor, molecular pathology experts (MDs) and representatives from the general and academic pathology practice settings.

The expert committee reviewed the survey data and compared it to the key reference code 88309 (Work RVU = 2.80, 90 minutes). The survey respondents indicated code 81408 is greater, or as intense and complex as 88309 in 8 out of 9 measures. All intensity and complexity measures indicated a high intensity and complexity. The expert panel agreed with the survey respondents that 81408 is complex and intense. The expert panel agreed that the median physician time of 80 minutes is typical and compared to the key reference service, the 25<sup>th</sup> percentile work RVU of 2.35 appropriately values 81408 within this family of Tier 2 services.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The molecular stacking codes are currently used for the TC and 83912 for the PC. CAP can not provide absolute frequency data as the previous reporting of these services was methodology based and not analyte specific. The specialty society estimates that the total number of Tier 1 and Tier 2 professional services will fall in the 350,000 range for the Medicare population based on the current volume of 83912.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty College of American Pathologists

How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
| Specialty | Frequency | Percentage | % |
| Specialty | Frequency | Percentage | % |

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,000  
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate.

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
| Specialty | Frequency | Percentage | % |
| Specialty | Frequency | Percentage | % |

Do many physicians perform this service across the United States? Yes

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 88182

AMA/Specialty Society RVS Update Committee  
Summary of Recommendations  
*Originated from the RUC Relativity Assessment Workgroup – Codes Reported Together 75% or More Screen*

September 2011

**Pacemaker or Pacing Cardioverter-Defibrillator**

In February 2010, the Pacemaker and Pacing Cardioverter-Defibrillator series of CPT codes (33207, 33208, 33212, 33213, 33240 and 33249) were identified by the Relativity Assessment Workgroup through the Codes Reported Together 75% or More Screen. These insertion codes were commonly billed with the removal codes (33233, 33241 and 71090) or the device evaluation code (93641). In February 2011, the specialties submitted a code change proposal to the CPT Editorial Panel to bundle the services commonly reported together. A total of 12 codes were created or significantly revised, mandating a RUC survey in April 2011. In April 2011, the RUC reviewed the services and determined that the survey data was inconsistent both in the physician time and work values of the removal and replacement codes. In addition, a data error was noted to have caused wide variances in the survey's post-operative visit data. Given the complexity of these services, the RUC recommended interim values at the April 2011 RUC Meeting. The specialty societies resurveyed these codes and presented them to the RUC at the September 2011 RUC Meeting.

*Pacemaker Services*

**33212 Insertion of pacemaker pulse generator only with existing; single lead**

The RUC reviewed the survey data for CPT code 33212 and agreed that the median physician time components accurately reflect the physician time required to perform this service. However, the survey respondents overstated the work RVU at the median level and the RUC agreed that the 25<sup>th</sup> percentile work RVU of 5.26 was appropriate for this service. To validate a work RVU of 5.26, the RUC compared 33212 to the key reference service CPT code 61885 *Insertion or replacement of cranial neurostimulator pulse generator or receiver, direct or inductive coupling; with connection to a single electrode array* (work RVU= 6.05). The Committee noted that the reference service has greater total time compared to the surveyed code, 181 minutes and 129 minutes, respectively and should be valued greater than 33212. Finally, the RUC discussed the appropriate level of post-operative visits for this service. The RUC agreed that the typical physician work related to the management of the wound requires one level three office visit (99213) and a half discharge day management service (99238). With solid survey data and the comparison to the key reference code, the RUC concurred that 33212 is appropriately valued relative to the family of services and other similar services in the RBRVS. **The RUC recommends a work RVU of 5.26 for CPT code 33212.**

**33213 Insertion of pacemaker pulse generator only with existing; dual leads**

The RUC reviewed the survey data for CPT code 33213 and agreed that the median intra-service time accurately reflects the physician time required to perform this service. However, the post-service time was reduced from 22.5 minutes to 20 minutes to maintain continuity between the entire family of services. The RUC agreed that the survey respondents overstated the work RVU at the median level and a consistent work value was established to ensure the physician work required to insert or remove and replace each additional lead is accurate and relative to the family. Therefore, the RUC

reviewed the survey data and noted that the average increase at the 25<sup>th</sup> percentile between each additional lead is 0.27 work RVUs for the entire surveyed family. The Committee applied the standard increment of 0.27 work RVUs to the base code, 33212, and agreed that a work RVU of 5.53 accurately reflects the typical physician work for 33213. To validate this work RVU, the RUC compared 33213 to reference code 61885 *Insertion or replacement of cranial neurostimulator pulse generator or receiver, direct or inductive coupling; with connection to a single electrode array* (work RVU= 6.05) and noted that 61885 has greater total time at 181 minutes compared to 130 minutes and should be valued greater than the surveyed code. Finally, the RUC discussed the appropriate level of post-operative visits for this service. The RUC agreed that the typical physician work related to the management of the wound requires one level three office visit (99213) and a half discharge day management service (99238). With the comparison to the reference code, the RUC concurred that 33213 is appropriately valued relative to the family of services and other similar services in the RBRVS. **The RUC recommends a work RVU of 5.53 for CPT code 33213.**

### ***33221 Insertion of pacemaker pulse generator only with existing; multiple leads***

The RUC reviewed the survey data for CPT code 33221 and agreed that the median physician time components accurately reflect the physician time required to perform this service. However, the survey respondents overstated the work RVU at the median level and the RUC applied the standard increment of 0.27 work RVUs to the insertion of dual leads code, 33213, and agreed that a work RVU of 5.80 accurately reflects the typical physician work for 33221. To validate this work RVU, the RUC noted that the recommended work RVU is almost identical to the 25<sup>th</sup> percentile survey value of 5.79. In addition, the RUC compared 33221 to reference code 61885 *Insertion or replacement of cranial neurostimulator pulse generator or receiver, direct or inductive coupling; with connection to a single electrode array* (work RVU= 6.05) and noted that 61885 has greater total time at 181 minutes compared to 134 minutes and should be valued greater than the surveyed code.

The RUC discussed the appropriate level of post-operative visits for this service. The RUC agreed that the typical physician work related to the management of the wound requires one level three office visit (99213) and a half discharge day management service (99238). Finally, the Committee compared the recommended work value of 33221 compared to 33213 and agreed that the increase of 0.27 work RVUs accurately reflects the added complexity of physician work required with the insertion of more than two leads. With the comparison to the reference code, the RUC concurred that 33221 is appropriately valued relative to the family of services and other similar services in the RBRVS. **The RUC recommends a work RVU of 5.80 for CPT code 33221.**

### ***33227 Removal of permanent pacemaker pulse generator with replacement of pacemaker pulse generator; single lead system***

The RUC reviewed the survey data for CPT code 33227 and agreed that the median physician time components accurately reflect the physician time required to perform this service. However, the survey respondents overstated the work RVU at the median level and the RUC agreed that the 25<sup>th</sup> percentile work RVU of 5.50 was appropriate for this service. To validate a work RVU of 5.50, the RUC compared 33227 to reference code 61885 *Insertion or replacement of cranial neurostimulator pulse generator or receiver, direct or inductive coupling; with connection to a single electrode array* (work RVU= 6.05) and noted that 61885 has greater total time at 181 minutes compared to 129 minutes and should be valued greater than the surveyed code. In addition, the Committee reviewed 36570 *Insertion of peripherally inserted central venous access device, with subcutaneous port; younger than 5 years of age* (work RVU= 5.36) and agreed that both services have identical intra-service time, 45 minutes, and should be valued similarly. Finally, the RUC discussed the appropriate level of post-operative visits for this service. The RUC agreed that the typical physician work

related to the management of the wound requires one level three office visit (99213) and a half discharge day management service (99238). With solid survey data and the comparison to two reference codes, the RUC concurred that 33227 is appropriately valued relative to the family of services and other similar services in the RBRVS. **The RUC recommends a work RVU of 5.50 for CPT code 33227.**

***33228 Removal of permanent pacemaker pulse generator with replacement of pacemaker pulse generator; dual lead system***

The RUC reviewed the survey data for CPT code 33228 and agreed that the median physician time components accurately reflect the physician time required to perform this service. However, the survey respondents overstated the work RVU at the median level and the RUC established a consistent work value increment to ensure the physician work required to insert or remove and replace each additional lead is accurate and relative to the family. Therefore, the RUC reviewed the survey data and noted that the average increase at the 25<sup>th</sup> percentile between each additional lead is 0.27 work RVUs for the entire surveyed family. The Committee applied the standard increment of 0.27 work RVUs to the base code, 33227, and agreed that a work RVU of 5.77 accurately reflects the typical physician work for 33228. To validate this work RVU, the RUC noted that the recommended work RVU is almost identical to the 25<sup>th</sup> percentile survey value of 5.70. In addition, the RUC compared 33228 to reference code 61885 *Insertion or replacement of cranial neurostimulator pulse generator or receiver, direct or inductive coupling; with connection to a single electrode array* (work RVU= 6.05) and noted that 61885 has greater total time at 181 minutes compared to 134 minutes and should be valued greater than the surveyed code. The Committee also reviewed 36570 *Insertion of peripherally inserted central venous access device, with subcutaneous port; younger than 5 years of age* (work RVU= 5.36) and agreed that the surveyed code should be valued higher than the reference code due to greater intra-service time, 50 minutes and 45 minutes, respectively. Finally, the RUC discussed the appropriate level of post-operative visits for this service. The RUC agreed that the typical physician work related to the management of the wound requires one level three office visit (99213) and a half discharge day management service (99238). With the comparison to two reference codes, the RUC concurred that 33228 is appropriately valued relative to the family of services and other similar services in the RBRVS. **The RUC recommends a work RVU of 5.77 for CPT code 33228.**

***33229 Removal of permanent pacemaker pulse generator with replacement of pacemaker pulse generator; multiple lead system***

The RUC reviewed the survey data for CPT code 33229 and agreed that the median physician time components accurately reflect the physician time required to perform this service. However, the survey respondents overstated the work RVU at the median level and the RUC applied the standard increment of 0.27 work RVUs to the dual removal and replacement of a dual lead system code, 33229, and agreed that a work RVU of 6.04 accurately reflects the typical physician work for 33229. To validate this work RVU, the RUC noted that the recommended work RVU is almost identical to the 25<sup>th</sup> percentile survey value of 6.00. In addition, the RUC compared 33229 to reference code 61885 *Insertion or replacement of cranial neurostimulator pulse generator or receiver, direct or inductive coupling; with connection to a single electrode array* (work RVU= 6.05) and noted that 61885 has greater total time at 181 minutes compared to 144 minutes and should be valued greater than the surveyed code. The Committee also reviewed 62350 *Implantation, revision or repositioning of tunneled intrathecal or epidural catheter, for long-term medication administration via an external pump or implantable reservoir/infusion pump; without laminectomy* (work RVU= 6.05) and noted that both services have identical intra-service time, 60 minutes. Therefore, 33229 and 62350 should be valued almost identically.

The RUC discussed the appropriate level of post-operative visits for this service. The RUC agreed that the typical physician work related to the management of the wound requires one level three office visit (99213) and a half discharge day management service (99238). Finally, the Committee compared the recommended work value of 33229 compared to 33228 and agreed that the increase of 0.27 work RVUs accurately reflects the added complexity of physician work required with the removal of more than two leads. With the comparison to the reference codes, the RUC concurred that 33229 is appropriately valued relative to the family of services and other similar services in the RBRVS. **The RUC recommends a work RVU of 6.04 for CPT code 33229.**

#### *Cardioverter-Defibrillator Services*

##### ***33240 Insertion of pacing cardioverter-defibrillator pulse generator only with existing; single lead***

The RUC reviewed the survey data for CPT code 33240 and agreed that the median physician time components accurately reflect the physician time required to perform this service. However, the survey respondents overstated the work RVU at the median level and the RUC agreed that the 25<sup>th</sup> percentile work RVU of 6.05 was appropriate for this service. To validate a work RVU of 6.05, the RUC compared 33240 to reference code 36561 *Insertion of tunneled centrally inserted central venous access device, with subcutaneous port; age 5 years or older* (work RVU= 6.04) and noted that while the surveyed code has greater total time compared to the reference code, 140 minutes and 130 minutes, respectively, the intra-service time for both services is highly comparable with identical time of 45 minutes. Given this, the RUC agreed that the two services should be valued similarly. Finally, the RUC discussed the appropriate level of post-operative visits for this service. The RUC agreed that the typical physician work related to the management of the wound requires one level three office visit (99213) and a half discharge day management service (99238). With the comparison to the reference code, the RUC concurred that 33240 is appropriately valued relative to the family of services and other similar services in the RBRVS. **The RUC recommends a work RVU of 6.05 for CPT code 33240.**

##### ***33230 Insertion of pacing cardioverter-defibrillator pulse generator only with existing; dual leads***

The RUC reviewed the survey data for CPT code 33230 and agreed that the median intra-service time accurately reflects the physician time required to perform this service. However, the post-service time was reduced from 25 minutes to 20 minutes to maintain continuity between the entire family of services. The RUC agreed that the survey respondents overstated the work RVU at the median level and a consistent work value was established to ensure the physician work required to insert or remove and replace each additional lead is accurate and relative to the family. The Committee applied the standard increment of 0.27 work RVUs to the base code, 33240, and agreed that a work RVU of 6.32 accurately reflects the typical physician work for 33230. To validate this work RVU, the RUC compared 33230 to reference code 36561 *Insertion of tunneled centrally inserted central venous access device, with subcutaneous port; age 5 years or older* (work RVU= 6.04) and noted that the surveyed code has greater intra-service time compared to the reference code, 60 minutes and 45 minutes, respectively. Therefore, 33230 should be valued greater than the reference code. In addition, the RUC compared 33230 to reference code 61885 *Insertion or replacement of cranial neurostimulator pulse generator or receiver, direct or inductive coupling; with connection to a single electrode array* (work RVU= 6.05) and agreed that the surveyed code should be valued greater given its higher intra-service time compared to the reference code, 60 minutes and 45 minutes, respectively. Finally, the RUC discussed the

appropriate level of post-operative visits for this service. The RUC agreed that the typical physician work related to the management of the wound requires one level three office visit (99213) and a half discharge day management service (99238). With the comparison to the reference codes, the RUC concurred that 33230 is appropriately valued relative to the family of services and other similar services in the RBRVS. **The RUC recommends a work RVU of 6.32 for CPT code 33230.**

***33231 Insertion of pacing cardioverter-defibrillator pulse generator only with existing; multiple leads***

The RUC reviewed the survey data for CPT code 33231 and agreed that the median intra-service time accurately reflects the physician time required to perform this service. However, the post-service time was reduced from 25 minutes to 20 minutes to maintain continuity between the entire family of services. The RUC agreed that the survey respondents overstated the work RVU at the median level and a consistent work value was established to ensure the physician work required to insert or remove and replace each additional lead is accurate and relative to the family. The Committee applied the standard increment of 0.27 work RVUs to the insertion of dual leads code, 33230, and agreed that a work RVU of 6.59 accurately reflects the typical physician work for 33231. To validate this work RVU, the RUC first noted that the recommended work RVU is almost identical to the 25<sup>th</sup> percentile survey value of 6.63. In addition, the RUC compared 33231 to reference code 36561 *Insertion of tunneled centrally inserted central venous access device, with subcutaneous port; age 5 years or older* (work RVU= 6.04) and noted that the surveyed code has greater intra-service time compared to the reference code, 60 minutes and 45 minutes, respectively. Therefore, 33231 should be valued greater than the reference code. In addition, the RUC compared 33231 to reference code 61885 *Insertion or replacement of cranial neurostimulator pulse generator or receiver, direct or inductive coupling; with connection to a single electrode array* (work RVU= 6.05) and agreed that the surveyed code should be valued greater given its higher intra-service time compared to the reference code, 60 minutes and 45 minutes, respectively.

The RUC discussed the appropriate level of post-operative visits for this service. The RUC agreed that the typical physician work related to the management of the wound requires one level three office visit (99213) and a half discharge day management service (99238). Finally, the Committee compared the recommended work value of 33231 compared to 33230 and agreed that the increase of 0.27 work RVUs accurately reflects the added complexity of physician work required with the insertion of more than two leads. With the comparison to the reference codes, the RUC concurred that 33231 is appropriately valued relative to the family of services and other similar services in the RBRVS. **The RUC recommends a work RVU of 6.59 for CPT code 33231.**

***33262 Removal of pacing cardioverter-defibrillator pulse generator with replacement of pacing cardioverter-defibrillator pulse generator; single lead system***

The RUC reviewed the survey data for CPT code 33262 and agreed that the median physician time components accurately reflect the physician time required to perform this service. However, the survey respondents overstated the work RVU at the median level and the RUC agreed that the 25<sup>th</sup> percentile work RVU of 6.06 was appropriate for this service. To validate a work RVU of 6.06, the RUC compared 33262 to reference code 62350 *Implantation, revision or repositioning of tunneled intrathecal or epidural catheter, for long-term medication administration via an external pump or implantable reservoir/infusion pump; without laminectomy* (work RVU= 6.05) and noted that both codes have identical intra-service time, 60 minutes and similar total time. Therefore, the surveyed code and reference code should be valued almost identically. Finally, the RUC discussed the

appropriate level of post-operative visits for this service. The RUC agreed that the typical physician work related to the management of the wound requires one level three office visit (99213) and a half discharge day management service (99238). With solid survey data and the comparison to the reference code, the RUC concurred that 33262 is appropriately valued relative to the family of services and other similar services in the RBRVS. **The RUC recommends a work RVU of 6.06 for CPT code 33262.**

***33263 Removal of pacing cardioverter-defibrillator pulse generator with replacement of pacing cardioverter-defibrillator pulse generator; dual lead system***

The RUC reviewed the survey data for CPT code 33263 and agreed that the median intra-service time accurately reflects the physician time required to perform this service. However, the post-service time was reduced from 25 minutes to 20 minutes to maintain continuity between the entire family of services. The RUC agreed that the survey respondents overstated the work RVU at the median level and a consistent work value was established to ensure the physician work required to insert or remove and replace each additional lead is accurate and relative to the family. The Committee applied the standard increment of 0.27 work RVUs to the base code, 33262, and agreed that a work RVU of 6.33 accurately reflects the typical physician work for 33263. To validate this work RVU, the RUC compared 33263 to reference code 36561 *Insertion of tunneled centrally inserted central venous access device, with subcutaneous port; age 5 years or older* (work RVU= 6.04) and noted that the surveyed code has greater intra-service time compared to the reference code, 60 minutes and 45 minutes, respectively. Therefore, 33263 should be valued greater than the reference code. In addition, the RUC compared 33263 to reference code 61885 *Insertion or replacement of cranial neurostimulator pulse generator or receiver, direct or inductive coupling; with connection to a single electrode array* (work RVU= 6.05) and agreed that the surveyed code should be valued greater given its higher intra-service time compared to the reference code, 60 minutes and 45 minutes, respectively. Finally, the RUC discussed the appropriate level of post-operative visits for this service. The RUC agreed that the typical physician work related to the management of the wound requires one level three office visit (99213) and a half discharge day management service (99238). With the comparison to the reference codes, the RUC concurred that 33263 is appropriately valued relative to the family of services and other similar services in the RBRVS. **The RUC recommends a work RVU of 6.33 for CPT code 33263.**

***33264 Removal of pacing cardioverter-defibrillator pulse generator with replacement of pacing cardioverter-defibrillator pulse generator; multiple lead system***

The RUC reviewed the survey data for CPT code 33264 and agreed that the median physician time components accurately reflect the physician time required to perform this service. However, the survey respondents overstated the work RVU at the median level and the RUC agreed that a consistent work value increment should be established to ensure the physician work required to insert or remove and replace each additional lead is accurate and relative to the family. The Committee applied the standard increment of 0.27 work RVUs to the removal and replacement of a dual lead system code, 33263, and agreed that a work RVU of 6.60 accurately reflects the typical physician work for 33264. To validate this work RVU, the RUC first noted that the recommended work RVU is almost identical to the 25<sup>th</sup> percentile survey value of 6.63. In addition, the RUC compared 33264 to reference code 36561 *Insertion of tunneled centrally inserted central venous access device, with subcutaneous port; age 5 years or older* (work RVU= 6.04) and noted that the surveyed code has greater intra-service time compared to the reference code, 60 minutes and 45 minutes, respectively. Therefore,

33264 should be valued greater than the reference code. In addition, the RUC compared 33264 to reference code 61885 *Insertion or replacement of cranial neurostimulator pulse generator or receiver, direct or inductive coupling; with connection to a single electrode array* (work RVU= 6.05) and agreed that the surveyed code should be valued greater given its higher intra-service time compared to the reference code, 60 minutes and 45 minutes, respectively.

The RUC discussed the appropriate level of post-operative visits for this service. The RUC agreed that the typical physician work related to the management of the wound requires one level three office visit (99213) and a half discharge day management service (99238). Finally, the Committee compared the recommended work value of 33264 compared to 33263 and agreed that the increase of 0.27 work RVUs accurately reflects the added complexity of physician work required with the insertion of more than two leads. With the comparison to the reference codes, the RUC concurred that 33264 is appropriately valued relative to the family of services and other similar services in the RBRVS. **The RUC recommends a work RVU of 6.60 for CPT code 33264.**

#### Work Neutrality

The RUC's recommendation for this family of codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

#### Practice Expense

The RUC accepted the direct practice expense inputs recommended by the specialty for these procedures performed in the facility setting at the April 2011 RUC Meeting.

| CPT Code<br>(●New)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Track-<br>ing<br>Num-<br>ber | CPT Descriptor | Global<br>Period | Work RVU<br>Recommendation |

|--------------------|------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|----------------------------|
|                    |                              | <p>pacemaker system includes a pulse generator and one electrode inserted in the right atrium and one electrode inserted in the right ventricle. In certain circumstances, an additional electrode may be required to achieve pacing of the left ventricle (bi-ventricular pacing). In this event, transvenous (cardiac vein) placement of the electrode should be separately reported using code 33224 or 33225. Epicardial placement of the electrode should be separately reported using 33202-33203.</p> <p>Like a pacemaker system, a pacing cardioverter-defibrillator (<u>ICD</u>) system includes a pulse generator and electrodes, although pacing cardioverter-defibrillators may require multiple leads, even when only a single chamber is being paced. A pacing cardioverter-defibrillator system may be inserted in a single chamber (pacing in the ventricle) or in dual chambers (pacing in atrium and ventricle). These devices use a combination of antitachycardia pacing, low-energy cardioversion or defibrillating shocks to treat ventricular tachycardia or ventricular fibrillation.</p> <p>Pacing cardioverter-defibrillator pulse generators may be implanted in a subcutaneous infraclavicular pocket or in an abdominal pocket. Removal of a pacing cardioverter-defibrillator pulse generator requires opening of the existing subcutaneous pocket and disconnection of the pulse generator from its electrode(s). A thoracotomy (or laparotomy in the case of abdominally placed pulse generators) is not required to remove the pulse generator.</p> <p>The electrodes (leads) of a pacing cardioverter-defibrillator system are positioned in the heart via the venous system (transvenously), in most circumstances. In certain circumstances, an additional electrode may be required to achieve pacing of the left ventricle (bi-ventricular pacing). In this event, transvenous (cardiac vein) placement of the electrode should be separately reported using code 33224 or 33225. Epicardial placement of the electrode should be separately reported using 33202-33203.</p> <p>Electrode positioning on the epicardial surface of the heart requires a thoracotomy, or thoracoscopic placement of the leads. Removal of electrode(s) may first be attempted by transvenous extraction (<del>code 33234, 33235, or 33244</del>). However, if transvenous extraction is unsuccessful, a thoracotomy may be required to remove the electrodes (<del>code 33238 or 33243</del>). Use <del>codes 33212, 33213, 33221, 33240, 33230, 33231</del>, as appropriate in addition to the thoracotomy or endoscopic epicardial lead placement codes to report the insertion of the generator if done by the same physician during the same session. (<del>33202 or 33203</del>) to report the insertion of the generator if done by the same physician during the same session.</p> <p>When the “battery” of a pacemaker or pacing cardioverter-defibrillator is changed, it is actually the pulse generator that is changed. <u>Removal of pacemaker or pacing cardioverter-defibrillator pulse generator only is reported with 33233 or 33241. Removal of a pacemaker or pacing cardioverter-defibrillator pulse generator with insertion of a new pulse generator without any replacement or insertion of a lead(s) is reported with 33227-33229 and 33262-33264. Replacement</u> Insertion of a new pulse generator, when existing leads are already in place and when no prior pulse</p> |                  |                            |

| <p>generator should be removed, is reported with 33212, 33213, 33221, 33240, 33230, 33231. When a code pulse generator insertion involves the insertion or replacement of one or more lead(s), use the system codes 33206-33208 for pacemaker or 33249 for removal pacing cardioverter-defibrillator. Removal of the pulse generator and another code for insertion (33233 or 33241) or extraction of transvenous leads (33234, 33235 or 33244) should be reported separately. An exception involves a pacemaker upgrade from single to dual system which includes removal of pulse generator, replacement of new pulse generator, and insertion of new lead, reported with 33214.</p> <p>Repositioning of a pacemaker electrode, pacing cardioverter-defibrillator electrode(s), or a left ventricular pacing electrode is reported using 33215 or 33226, as appropriate. Replacement of a pacemaker electrode, pacing cardioverter-defibrillator electrode(s), or a left ventricular pacing electrode is reported using 33206-33208, 33210-33213, or 33224, as appropriate.</p> <p>The pacemaker and pacing cardioverter-defibrillator device evaluation codes 93279-93299 may not be reported in conjunction with pulse generator and lead insertion or revision codes 33206-33249. Defibrillator threshold testing (DFT) during pacing cardioverter-defibrillator insertion or replacement may be separately reported using 93640, 93641.</p> <p>Radiological supervision and interpretation related to the pacemaker or pacing cardioverter-defibrillator procedure is included in 33206-33249. To report fluoroscopic guidance for diagnostic lead evaluation without lead insertion, replacement, or revision procedures, use 76000.</p> <p>The following definitions apply to 33206-33249.</p> <p><b><u>Single lead:</u></b> a pacemaker or pacing cardioverter-defibrillator with pacing and sensing function in only one chamber of the heart.</p> <p><b><u>Dual lead:</u></b> a pacemaker or pacing cardioverter-defibrillator with pacing and sensing function in only two chambers of the heart.</p> <p><b><u>Multiple lead:</u></b> a pacemaker or pacing cardioverter-defibrillator with pacing and sensing function in three or more chambers of the heart.</p> |                              |                                                                                                                                                                                                                                   |                  |                            |

CPT Descriptor: Insertion of pacemaker pulse generator only with existing; single lead

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 68 year old patient presents with complete heart block and existing lead placed during a separate surgical procedure. The patient has no signs of systemic infection and needs implantation of a single chamber pacemaker pulse generator and attachment to existing lead.

Percentage of Survey Respondents who found Vignette to be Typical: 70%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 97% , In the ASC 0%, In the office 3%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 86% , Overnight stay-less than 24 hours 14% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 25%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? Yes

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 83%

Is moderate sedation inherent to this procedure in the office setting? Yes

Percent of survey respondents who stated moderate sedation is typical in the office setting? 100%

Description of Pre-Service Work: Patient is evaluated for stability with respect to overall cardiovascular status. A history and multi-system physical exam are obtained. The procedure and its risks are discussed in detail with the patient and patient's family, as well as why pacing is needed, the risks, benefits, indications and alternatives. Mark the incision site and obtain informed consent and answer patient and family questions. Scheduling and follow-up issues are discussed. Medications are often adjusted including insulin, diuretics and anti-coagulants. Monitor the patient positioning and draping and assist with positioning as needed. Scrub and gown. Observe and/or assist in insertion of monitoring lines and induction of anesthesia.

Description of Intra-Service Work: The appropriate pectoral region is prepared and draped in a sterile manner. An incision is made in the subclavicular region and carried to the pectoralis fascia or the subpectoral region. A pocket for the pacemaker generator is created either in the plane of pectoralis fascia or underneath the pectoral muscles just above the ribcage. The existing lead is dissected free from fibrous tissue. Hemostasis is achieved. The lead is tested for sensing, capture threshold and impedance. The pocket is irrigated. The pacing lead is connected to the new generator. The generator is inserted into the pocket. The pocket is closed with either suture alone or a combination of suture and staples or suture and tissue adhesive. Programming of the device is performed.

Description of Post-Service Work: Report dictated and temporary immediate post-op sheet is completed. Family is found and updated on patient's status. The wound is assessed with respect to appropriate healing. The dressing is removed. Any required antibiotics or analgesic medications are prescribed. Orders are written and staff are given instructions. The patient is then established on a schedule for periodic appropriate Pacemaker Clinic visits, as well as transtelephonic monitoring.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The codes related to pacemaker and internal cardioverter-defibrillator (ICD) removal and replacement were identified by the CPT/RUC Joint Workgroup as being commonly reported together in 2009. The American College of Cardiology and the Heart Rhythm Society were instructed to create bundled services that reflected the commonly provided removal and replacement of a pacemaker or ICD pulse generator. As part of this coding proposal, new codes were added to reflect the availability of pacemakers and ICDs with greater than two leads. A total of 12 codes were created or significantly revised, mandating a RUC survey. ACC and

HRS convened a panel of physicians familiar with the services to review the survey data. The survey was robust and was completed by physicians who have experience with each of the services.

Code 33212 will be used to report the insertion of a single lead pacemaker pulse generator without having first removed another pulse generator. This service will be reported uncommonly. After reviewing the data, the physicians noted that the median survey value of 5.85 was higher than the current value of 5.52. The panel did not feel that an argument could be made for compelling evidence to increase the work value for the service.

The panel reviewed the preservice time and selected package 1b, a straightforward patient and a straightforward procedure with sedation. The service is generally performed under conscious sedation which is included as part of the code. The package was adjusted to reduce the preservice evaluation time from 19 minutes to 15 minutes to reflect the data from the survey.

The panel noted that the survey showed that the service is commonly performed in a hospital but the patient is sent home the same day. Based on the newly established RUC standard, the panel included a half-day hospital discharge as part of the recommendation as well.

Survey respondents identified a median of 2 follow-up visits for this service, one 99213 and one 99214.

The key reference service is 61885, insertion or replacement of cranial neurostimulator pulse generator or receiver, direct or inductive coupling; with connection to 2 or more electrode arrays. Those who selected the key service felt 33212 was more intense/complex than this reference service in some measures and less intense/complex in other measures when compared to this reference service.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 33212

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty cardiology/electrophysiology

How often? Rarely

Specialty

How often?

Specialty

How often?

Estimate the number of times this service might be provided nationally in a one-year period? 203

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2009 Medicare Part B Claims Data for the prior code and an extrapolation of an estimated 99% decrease in utilization. The panel believes 2/3 of the total utilization will be provided to Medicare patients.

CPT Descriptor: Insertion of pacemaker pulse generator only with existing; dual leads

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: An 82 year-old patient presents with third degree AV block and existing leads placed during a separate surgical procedure. The patient has no signs of systemic infection and needs implantation of a dual chamber pacemaker pulse generator and attachment to existing leads.

Percentage of Survey Respondents who found Vignette to be Typical: 77%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 97% , In the ASC 0%, In the office 3%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 90% , Overnight stay-less than 24 hours 10% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 33%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? Yes

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 82%

Is moderate sedation inherent to this procedure in the office setting? Yes

Percent of survey respondents who stated moderate sedation is typical in the office setting? 100%

Description of Pre-Service Work: Patient is evaluated for stability with respect to overall cardiovascular status. A history and multi-system physical exam are obtained. The procedure and its risks are discussed in detail with the patient and patient's family, as well as why pacing is needed, the risks, benefits, indications and alternatives. Mark the incision site and obtain informed consent and answer patient and family questions. Scheduling and follow-up issues are discussed. Medications are often adjusted including insulin, diuretics and anti-coagulants. Monitor the patient positioning and draping and assist with positioning as needed. Scrub and gown. Observe and/or assist in insertion of monitoring lines and induction of anesthesia.

Description of Intra-Service Work: The appropriate pectoral region is prepared and draped in a sterile manner. An incision is made in the subclavicular region and carried to the pectoralis fascia or the subpectoral region. A pocket for the pacemaker generator is created either in the plane of pectoralis fascia or underneath the pectoral muscles just above the ribcage. The existing leads are dissected free from fibrous tissue. Hemostasis is achieved. The leads are tested for sensing, capture threshold and impedance. The pocket is irrigated. The pacing leads are connected to the new generator. The generator is inserted into the pocket. The pocket is closed with either suture alone or a combination of suture and staples or suture and tissue adhesive. Programming of the device is performed.

Description of Post-Service Work: Report dictated and temporary immediate post-op sheet is completed. Family is found and updated on patient's status. The wound is assessed with respect to appropriate healing. The dressing is removed. Any required antibiotics or analgesic medications are prescribed. Orders are written and staff are given instructions. The patient is then established on a schedule for periodic appropriate Pacemaker Clinic visits, as well as transtelephonic monitoring.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The codes related to pacemaker and internal cardioverter-defibrillator (ICD) removal and replacement were identified by the CPT/RUC Joint Workgroup as being commonly reported together in 2009. The American College of Cardiology and the Heart Rhythm Society were instructed to create bundled services that reflected the commonly provided removal and replacement of a pacemaker or ICD pulse generator. As part of this coding proposal, new codes were added to reflect the availability of pacemakers and ICDs with greater than two leads. A total of 12 codes were created or significantly revised, mandating a RUC survey. ACC and

HRS convened a panel of physicians familiar with the services to review the survey data. The survey was robust and was completed by physicians who have experience with each of the services.

Code 33213 will be used to report the insertion of a dual lead pacemaker pulse generator without having first removed another pulse generator. This service will be reported uncommonly. After reviewing the data, the panel felt the survey median of 6.05 adequately represents the physician work for the procedure.

The panel reviewed the preservice time and selected package 1b, a straightforward patient and a straightforward procedure with sedation. The service is generally performed under conscious sedation which is included as part of the code. The package was adjusted to reduce the preservice evaluation time from 19 minutes to 15 minutes to reflect the data from the survey.

The panel noted that the survey showed that the service is commonly performed in a hospital but the patient is sent home the same day. Based on the newly established RUC standard, the panel included a half-day hospital discharge as part of the recommendation as well.

Survey respondents identified a median of 2 follow-up visits for this service, both 99213.

The key reference service is 33217, insertion of 2 transvenous electrodes, permanent pacemaker or cardioverter-defibrillator. Those who selected the key service felt 33213 was more intense/complex than this reference service.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 33213

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty cardiology/electrophysiology                      How often? Rarely

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 729

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2009 Medicare Part B Claims Data for the prior code and an extrapolation of an estimated 90% decrease in utilization. The panel believes 2/3 of the total utilization will be provided to Medicare patients.

CPT Descriptor: Insertion of pacemaker pulse generator only with existing; multiple leads

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 42-year-old patient with congenital heart disease presents with systolic heart failure and left bundle branch block (LBBB). During a prior surgical procedure, pacemaker leads were placed in the right atrium (RA), right ventricle (RV) and left ventricle (LV) in anticipation of need for pacing and tunneled subcutaneously. The patient now meets indications for biventricular pacing.

Percentage of Survey Respondents who found Vignette to be Typical: 72%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 96% , In the ASC 0%, In the office 4%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 96% , Overnight stay-less than 24 hours 4% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 100%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? Yes

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 86%

Is moderate sedation inherent to this procedure in the office setting? Yes

Percent of survey respondents who stated moderate sedation is typical in the office setting? 100%

Description of Pre-Service Work: Patient is evaluated for stability with respect to overall cardiovascular status. A history and multi-system physical exam are obtained. The procedure and its risks are discussed in detail with the patient and patient's family, as well as why pacing is needed, the risks, benefits, indications and alternatives. Mark the incision site and obtain informed consent and answer patient and family questions. Scheduling and follow-up issues are discussed. Medications are often adjusted including insulin, diuretics and anti-coagulants. Monitor the patient positioning and draping and assist with positioning as needed. Scrub and gown. Observe and/or assist in insertion of monitoring lines and induction of anesthesia.

Description of Intra-Service Work: The appropriate pectoral region is prepared and draped in a sterile manner. An incision is made in the subclavicular region and carried to the pectoralis fascia or the subpectoral region. A pocket for the pacemaker generator is created either in the plane of pectoralis fascia or underneath the pectoral muscles just above the ribcage. The existing leads are dissected free from fibrous tissue. Hemostasis is achieved. The leads are tested for sensing, capture threshold and impedance. The pocket is irrigated. The pacing leads are connected to the new generator. The generator is inserted into the pocket. The pocket is closed with either suture alone or a combination of suture and staples or suture and tissue adhesive. Programming of the device is performed.

Description of Post-Service Work: Report dictated and temporary immediate post-op sheet is completed. Family is found and updated on patient's status. The wound is assessed with respect to appropriate healing. The dressing is removed. Any required antibiotics or analgesic medications are prescribed. Orders are written and staff are given instructions. The patient is then established on a schedule for periodic appropriate Pacemaker Clinic visits, as well as transtelephonic monitoring.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The codes related to pacemaker and internal cardioverter-defibrillator (ICD) removal and replacement were identified by the CPT/RUC Joint Workgroup as being commonly reported together in 2009. The American College of Cardiology and the Heart Rhythm Society were instructed to create bundled services that reflected the commonly provided removal and replacement of a pacemaker or ICD pulse generator. As part of this coding proposal, new codes were added to reflect the availability of pacemakers and ICDs with greater than two leads. A total of 12 codes were created or significantly revised, mandating a RUC survey. ACC and

HRS convened a panel of physicians familiar with the services to review the survey data. The survey was robust and was completed by physicians who have experience with each of the services.

Code 33221 will be used to report the insertion of a multiple lead pacemaker pulse generator without having first removed another pulse generator. This service will be reported uncommonly. After reviewing the data, the panel felt the survey median of 6.25 adequately represents the physician work for the procedure.

The panel reviewed the preservice time and selected package 1b, a straightforward patient and a straightforward procedure with sedation. The service is generally performed under conscious sedation which is included as part of the code.

The panel noted that the survey showed that the service is commonly performed in a hospital but the patient is sent home the same day. Based on the newly established RUC standard, the panel included a half-day hospital discharge as part of the recommendation as well.

Survey respondents identified a median of 2 follow-up visits for this service, both 99213.

The key reference service is 33235, removal of transvenous pacemaker electrode(s); dual lead system. Those who selected the key service felt 33221 was more intense/complex than this reference service in all but one aspect of comparison.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 33233

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty cardiology                      How often? Rarely

Specialty                                      How often?

Specialty                                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 729

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2009 Medicare Part B Claims Data for the prior code and an extrapolation

of an estimated 90% decrease in utilization. The panel believes 2/3 of the total utilization will be provided to Medicare patients.

CPT Descriptor: Removal of permanent pacemaker pulse generator with replacement of pacemaker pulse generator; single lead system

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: An 85-year-old patient presents with a history of complete heart block whose pacemaker generator is at elective replacement indicator. The patient has no evidence of systemic infection or decompensated congestive heart failure (CHF).

Percentage of Survey Respondents who found Vignette to be Typical: 97%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 97% , In the ASC 0%, In the office 3%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 90% , Overnight stay-less than 24 hours 10% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 33%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? Yes

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 84%

Is moderate sedation inherent to this procedure in the office setting? Yes

Percent of survey respondents who stated moderate sedation is typical in the office setting? 100%

Description of Pre-Service Work: Patient is evaluated for stability with respect to overall cardiovascular status. A history and multi-system physical exam are obtained. The procedure and its risks are discussed in detail with the patient and patient's family, as well as why pacing is needed, the risks, benefits, indications and alternatives. Mark the incision site and obtain informed consent and answer patient and family questions. Scheduling and follow-up issues are discussed. Medications are often adjusted including insulin, diuretics and anti-coagulants. Monitor the patient positioning and draping and assist with positioning as needed. Scrub and gown. Observe and/or assist in insertion of monitoring lines and induction of anesthesia.

Description of Intra-Service Work: The appropriate pectoral region is prepared and draped in a sterile manner. An incision is made of the existing generator and carried down to the level of the capsule surrounding the generator. The existing generator is dissected free and the lead is freed from fibrous scar tissue. This must be performed in a manner preventing damage to the lead. Often extensive removal of scar tissue/capsule is required. During the procedure adequate hemostasis and sterility are maintained. The existing lead is tested to assess the adequacy, including capture threshold, sensing and impedance. The pocket may need to be modified to accommodate the shape and size of the new generator. The pocket is copiously irrigated. The new generator is inserted in the pocket and attached to the existing lead. The pocket is closed with either suture alone or a combination of suture and staples or suture and tissue adhesive. Programming of the device is performed.

Description of Post-Service Work: Report dictated and temporary immediate post-op sheet is completed. Family is found and updated on patient's status. The wound is assessed with respect to appropriate healing. The dressing is removed. Any required antibiotics or analgesic medications are prescribed. Orders are written and staff are given instructions. The

patient is then established on a schedule for periodic appropriate Pacemaker Clinic visits, as well as transtelephonic monitoring.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The codes related to pacemaker and internal cardioverter-defibrillator (ICD) removal and replacement were identified by the CPT/RUC Joint Workgroup as being commonly reported together in 2009. The American College of Cardiology and the Heart Rhythm Society were instructed to create bundled services that reflected the commonly provided removal and replacement of a pacemaker or ICD pulse generator. As part of this coding proposal, new codes were added to reflect the availability of pacemakers and ICDs with greater than two leads. A total of 12 codes were created or significantly revised, mandating a RUC survey. ACC and

HRS convened a panel of physicians familiar with the services to review the survey data. The survey was robust and was completed by physicians who have experience with each of the services.

Code 3323X1 will be used to report the insertion of a single lead pacemaker pulse generator after first removing another pulse generator, typically at the end of its service life. After reviewing the data, the panel felt the survey median of 6.05 adequately represents the physician work for the procedure. It also eliminates redundancies that may exist under the current convention of reporting 33212 with 33233 for this service. The current value of 7.22 was calculated based on a 50% reduction placed on the lesser valued code as part of a multiple procedure edit.

The panel reviewed the preservice time and selected package 1b, a straightforward patient and a straightforward procedure with sedation. The service is generally performed under conscious sedation which is included as part of the code. The package was adjusted to reduce the preservice evaluation time from 19 minutes to 16.5 minutes to reflect the data from the survey.

The panel noted that the survey showed that the service is commonly performed in a hospital but the patient is sent home the same day. Based on the newly established RUC standard, the panel included a half-day hospital discharge as part of the recommendation as well.

Survey respondents identified a median of 2 follow-up visits for this service, one 99213 and one 99214.

The key reference service is 33222, revision or relocation of skin pocket for pacemaker. Those who selected the key service felt 3323X1 was more intense/complex than this reference service in all but one aspect of comparison.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The service was reported with a combination of codes 33212 and 33233. The value for code 33233 was reduced by 50% under Medicare multiple procedure edit.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty cardiology                      How often? Commonly

Specialty                                      How often?

Specialty                                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 28266

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2009 Medicare Part B Claims Data for the prior code and an extrapolation of an estimated 71% decrease in utilization. The panel believes 2/3 of the total utilization will be provided to Medicare patients.

CPT Descriptor: Removal of permanent pacemaker pulse generator with replacement of pacemaker pulse generator; dual lead system

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: An 82-year-old patient presents with a history of sick sinus syndrome and intermittent paroxysmal atrial fibrillation. The pacemaker is at elective replacement indicator. The patient has no evidence of systemic infection. The patient is complaining of dyspnea felt to be related to a rate or mode change due to the device reaching elective replacement indicator.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 97% , In the ASC 0%, In the office 3%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 91% , Overnight stay-less than 24 hours 90% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 33%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? Yes

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 84%

Is moderate sedation inherent to this procedure in the office setting? Yes

Percent of survey respondents who stated moderate sedation is typical in the office setting? 100%

Description of Pre-Service Work: Patient is evaluated for stability with respect to overall cardiovascular status. A history and multi-system physical exam are obtained. The procedure and its risks are discussed in detail with the patient and patient's family, as well as why pacing is needed, the risks, benefits, indications and alternatives. Mark the incision site and obtain informed consent and answer patient and family questions. Scheduling and follow-up issues are discussed. Medications are often adjusted including insulin, diuretics and anti-coagulants. Monitor the patient positioning and draping and assist with positioning as needed. Scrub and gown. Observe and/or assist in insertion of monitoring lines and induction of anesthesia.

Description of Intra-Service Work: The appropriate pectoral region is prepared and draped in a sterile manner. An incision is made of the existing generator and carried down to the level of the capsule surrounding the generator. The existing generator is dissected free and the leads are freed from fibrous scar tissue. Often extensive removal of scar tissue/capsule is required. This must be performed in a manner preventing damage to the leads. During the procedure adequate hemostasis and sterility are maintained. The existing leads are tested to assess the adequacy, including capture threshold, sensing and impedance. The pocket may need to be modified to accommodate the shape and size of the new generator. The pocket is copiously irrigated. The new generator is inserted in the pocket and attached to the existing leads. The pocket is closed with either suture alone or a combination of suture and staples or suture and tissue adhesive. Programming of the device is performed.

Description of Post-Service Work: Report dictated and temporary immediate post-op sheet is completed. Family is found and updated on patient's status. The wound is assessed with respect to appropriate healing. The dressing is removed. Any

required antibiotics or analgesic medications are prescribed. Orders are written and staff are given instructions. The patient is then established on a schedule for periodic appropriate Pacemaker Clinic visits, as well as transtelephonic monitoring.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The codes related to pacemaker and internal cardioverter-defibrillator (ICD) removal and replacement were identified by the CPT/RUC Joint Workgroup as being commonly reported together in 2009. The American College of Cardiology and the Heart Rhythm Society were instructed to create bundled services that reflected the commonly provided removal and replacement of a pacemaker or ICD pulse generator. As part of this coding proposal, new codes were added to reflect the availability of pacemakers and ICDs with greater than two leads. A total of 12 codes were created or significantly revised, mandating a RUC survey. ACC and

HRS convened a panel of physicians familiar with the services to review the survey data. The survey was robust and was completed by physicians who have experience with each of the services.

Code 3323X2 will be used to report the insertion of a dual lead pacemaker pulse generator after first removing another pulse generator, typically at the end of its service life. After reviewing the data, the panel felt the survey median of 6.50 adequately represents the physician work for the procedure. It also eliminates redundancies that may exist under the current convention of reporting 33213 with 33233 for this service. The current value of 8.07 was calculated based on a 50% reduction placed on the lesser valued code as part of a multiple procedure edit.

The panel reviewed the preservice time and selected package 1b, a straightforward patient and a straightforward procedure with sedation. The service is generally performed under conscious sedation which is included as part of the code. The package was adjusted to reduce the preservice evaluation time from 19 minutes to 18 minutes to reflect the data from the survey.

The panel noted that the survey showed that the service is commonly performed in a hospital but the patient is sent home the same day. Based on the newly established RUC standard, the panel included a half-day hospital discharge as part of the recommendation as well.

Survey respondents identified a median of 2 follow-up visits for this service, both 99213.

The key reference service is 33222, revision or relocation of skin pocket for pacemaker. Those who selected the key service felt 3323X2 was more intense/complex than this reference service.

---

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.
- 

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) This code was previously reported as a combination of codes 33213 and 33233. The value for 33233 was cut by 50% based on Medicare's multiple procedure reduction.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty cardiology                      How often? Commonly

Specialty                                      How often?

Specialty                                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 672553

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2009 Medicare Part B Claims Data for the prior code combination and expert opinion of physicians. The panel believes 2/3 of the total utilization will be provided to Medicare patients.

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 44,835 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. These estimates are based on reviews of the number of claims reported for codes 33213 and 33233 in 2009 and expert opinion on the percentage that would be reported as dual or multiple lead pacemaker.

CPT Descriptor: Removal of permanent pacemaker pulse generator with replacement of pacemaker pulse generator; multiple lead system

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: An 84-year-old patient presents with moderate to severe congestive heart failure (CHF) and left bundle branch block (LBBB) and does not wish to have implantable cardioverter-defibrillator (ICD) therapy. The biventricular pacemaker is at elective replacement indicator. There is no evidence of systemic infection.

Percentage of Survey Respondents who found Vignette to be Typical: 91%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 97% , In the ASC 0%, In the office 3%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 87% , Overnight stay-less than 24 hours 13% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 50%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? Yes

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 81%

Is moderate sedation inherent to this procedure in the office setting? Yes

Percent of survey respondents who stated moderate sedation is typical in the office setting? 100%

Description of Pre-Service Work: Patient is evaluated for stability with respect to overall cardiovascular status. A history and multi-system physical exam are obtained. The procedure and its risks are discussed in detail with the patient and patient's family, as well as why pacing is needed, the risks, benefits, indications and alternatives. Mark the incision site and obtain informed consent and answer patient and family questions. Scheduling and follow-up issues are discussed. Medications are often adjusted including insulin, diuretics and anti-coagulants. Monitor the patient positioning and draping and assist with positioning as needed. Scrub and gown. Observe and/or assist in insertion of monitoring lines and induction of anesthesia.

Description of Intra-Service Work: The appropriate pectoral region is prepared and draped in a sterile manner. An incision is made of the existing generator and carried down to the level of the capsule surrounding the generator. The existing generator is dissected free and the leads are freed from fibrous scar tissue. Often extensive removal of scar tissue/capsule is required. This must be performed in a manner preventing damage to the leads. During the procedure adequate hemostasis and sterility are maintained. The existing leads are tested to assess the adequacy, including capture threshold, sensing and impedance. The pocket may need to be modified to accommodate the shape and size of the new generator. The pocket is copiously irrigated. The new generator is inserted in the pocket and attached to the existing leads. The pocket is closed with either suture alone or a combination of suture and staples or suture and tissue adhesive. Programming of the device is performed.

Description of Post-Service Work: Report dictated and temporary immediate post-op sheet is completed. Family is found and updated on patient's status. The wound is assessed with respect to appropriate healing. The dressing is removed. Any required antibiotics or analgesic medications are prescribed. Orders are written and staff are given instructions. The

patient is then established on a schedule for periodic appropriate Pacemaker Clinic visits, as well as transtelephonic monitoring.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The codes related to pacemaker and internal cardioverter-defibrillator (ICD) removal and replacement were identified by the CPT/RUC Joint Workgroup as being commonly reported together in 2009. The American College of Cardiology and the Heart Rhythm Society were instructed to create bundled services that reflected the commonly provided removal and replacement of a pacemaker or ICD pulse generator. As part of this coding proposal, new codes were added to reflect the availability of pacemakers and ICDs with greater than two leads. A total of 12 codes were created or significantly revised, mandating a RUC survey. ACC and

HRS convened a panel of physicians familiar with the services to review the survey data. The survey was robust and was completed by physicians who have experience with each of the services.

Code 3323X3 will be used to report the insertion of a multiple lead pacemaker pulse generator after first removing another pulse generator, typically at the end of its service life. After reviewing the data, the panel felt the survey median of 7.50 adequately represents the physician work for the procedure. It also eliminates redundancies that may exist under the current convention of reporting 33213 with 33233 for this service. The current value of 8.07 was calculated based on a 50% reduction placed on the lesser valued code as part of a multiple procedure edit.

The panel reviewed the preservice time and selected package 1b, a straightforward patient and a straightforward procedure with sedation. The service is generally performed under conscious sedation which is included as part of the code.

The panel noted that the survey showed that the service is commonly performed in a hospital but the patient is sent home the same day. Based on the newly established RUC standard, the panel included a half-day hospital discharge as part of the recommendation as well.

Survey respondents identified a median of 2 follow-up visits for this service, both 99213.

The key reference service is 33234, removal of transvenous pacemaker electrode(s); single lead system, atrial or ventricular. Those who selected the key service felt 3323X3 was more intense/complex than this reference service in some measures and similarly intense/complex in other measures when compared to this reference service.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The ACCC and HRS believe that most physicians would have reported this service with a combination of codes 33213 and 33233 despite code 33213 being specified for a dual lead pacemaker. Since 33213 is closest to this code, it was most likely that which was reported. Multiple lead pacemakers had not been introduced when the code was originally valued.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty cardiology                      How often? Commonly

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 1950

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2009 Medicare Part B Claims Data for the prior codes 33213 and 33233 and physician expert opinion on the distribution of dual and multiple lead pacemakers. The panel believes 2/3 of the total utilization will be provided to Medicare patients.

CPT Descriptor: Insertion of pacing cardioverter-defibrillator pulse generator only with existing; single lead

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 64 year old patient presents with history of coronary artery disease, old myocardial infarction approximately 3-4 years ago with depressed left ventricular function with ejection fraction of 34% and existing lead placed during a separate surgical procedure. The patient has no signs of systemic infection and needs implantation of a single chamber ICD generator and attachment to existing lead to complete a functional system

Percentage of Survey Respondents who found Vignette to be Typical: 72%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 95% , In the ASC 0%, In the office 5%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 89% , Overnight stay-less than 24 hours 11% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 25%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? Yes

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 69%

Is moderate sedation inherent to this procedure in the office setting? Yes

Percent of survey respondents who stated moderate sedation is typical in the office setting? 67%

Description of Pre-Service Work: Patient is evaluated for stability with respect to overall cardiovascular status. A history and multi-system physical exam are obtained. The procedure and its risks are discussed in detail with the patient and patient's family, as well as why pacing is needed, the risks, benefits, indications and alternatives. Mark the incision site and obtain informed consent and answer patient and family questions. Scheduling and follow-up issues are discussed. Medications are often adjusted including insulin, diuretics and anti-coagulants. Monitor the patient positioning and draping and assist with positioning as needed. Scrub and gown. Observe and/or assist in insertion of monitoring lines and induction of anesthesia.

Description of Intra-Service Work: The appropriate pectoral region is prepared and draped in a sterile manner. An incision is made in the subclavicular region and carried to the pectoralis fascia or the subpectoral region. A pocket for the pacemaker generator is created either in the plane of pectoralis fascia or underneath the pectoral muscles just above the ribcage. The existing lead is dissected free from fibrous tissue. Hemostasis is achieved. The lead is tested for sensing, capture threshold and impedance. The pocket is irrigated. The pacing lead is connected to the new generator. The generator is inserted into the pocket. The pocket is closed with either suture alone or a combination of suture and staples or suture and tissue adhesive. Programming of the device is performed.

Description of Post-Service Work: Report dictated and temporary immediate post-op sheet is completed. Family is found and updated on patient's status. The wound is assessed with respect to appropriate healing. The dressing is removed. Any required antibiotics or analgesic medications are prescribed. Orders are written and staff are given instructions. The patient is then established on a schedule for periodic appropriate Pacemaker Clinic visits, as well as transtelephonic monitoring.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The codes related to pacemaker and internal cardioverter-defibrillator (ICD) removal and replacement were identified by the CPT/RUC Joint Workgroup as being commonly reported together in 2009. The American College of Cardiology and the Heart Rhythm Society were instructed to create bundled services that reflected the commonly provided removal and replacement of a pacemaker or ICD pulse generator. As part of this coding proposal, new codes were added to reflect the availability of pacemakers and ICDs with greater than two leads. A total of 12 codes were created or significantly revised, mandating a RUC survey. ACC and

HRS convened a panel of physicians familiar with the services to review the survey data. The survey was robust and was completed by physicians who have experience with each of the services.

Code 33240 will be used to report the insertion of a single lead pacing cardioverter-defibrillator without having first removed another pulse generator. This service will be reported uncommonly. After reviewing the data, the panel felt the survey median of 6.85 adequately represents the physician work for the procedure.

The panel reviewed the preservice time and selected package 3, a straightforward patient and a difficult procedure with sedation. The service is generally performed under IV deep sedation and local anesthesia or under general anesthesia, which is included as part of the code. The package was adjusted to reduce the preservice evaluation time from 33 minutes to 15 minutes to reflect the data from the survey.

The panel noted that the survey showed that the service is commonly performed in a hospital but the patient is sent home the same day. Based on the newly established RUC standard, the panel included a half-day hospital discharge as part of the recommendation as well.

Survey respondents identified a median of 2 follow-up visits for this service, both 99213.

The key reference service is 33223, revision of skin pocket for cardioverter-defibrillator. Those who selected the key service felt 33240 was more intense/complex than this reference service in all but one aspect of comparison.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 33240. That code was split to create 3 codes that are reported based on the number of leads to be consistent with other cardiac device codes.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty cardiology                      How often? Rarely

Specialty                                      How often?

Specialty                                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 426

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2009 Medicare Part B Claims Data

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|

CPT Descriptor: Insertion of pacing cardioverter-defibrillator pulse generator only with existing; dual leads

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 67-year old patient presents with systolic heart failure and existing leads placed during a separate surgical procedure. The patient has no signs of systemic infection and needs implantation of a dual chamber ICD generator and attachment to existing leads to complete a functional system.

Percentage of Survey Respondents who found Vignette to be Typical: 74%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 95% , In the ASC 0%, In the office 5%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 81% , Overnight stay-less than 24 hours 19% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 50%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? Yes

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 66%

Is moderate sedation inherent to this procedure in the office setting? Yes

Percent of survey respondents who stated moderate sedation is typical in the office setting? 67%

Description of Pre-Service Work: Patient is evaluated for stability with respect to overall cardiovascular status. A history and multi-system physical exam are obtained. The procedure and its risks are discussed in detail with the patient and patient's family, as well as why pacing is needed, the risks, benefits, indications and alternatives. Mark the incision site and obtain informed consent and answer patient and family questions. Scheduling and follow-up issues are discussed. Medications are often adjusted including insulin, diuretics and anti-coagulants. Monitor the patient positioning and draping and assist with positioning as needed. Scrub and gown. Observe and/or assist in insertion of monitoring lines and induction of anesthesia.

Description of Intra-Service Work: The appropriate pectoral region is prepared and draped in a sterile manner. An incision is made in the subclavicular region and carried to the pectoralis fascia or the subpectoral region. A pocket for the pacemaker generator is created either in the plane of pectoralis fascia or underneath the pectoral muscles just above the ribcage. The existing leads are dissected free from fibrous tissue. Hemostasis is achieved. The leads are tested for sensing, capture threshold and impedance. The pocket is irrigated. The pacing leads are connected to the new generator. The generator is inserted into the pocket. The pocket is closed with either suture alone or a combination of suture and staples or suture and tissue adhesive. Programming of the device is performed.

Description of Post-Service Work: Report dictated and temporary immediate post-op sheet is completed. Family is found and updated on patient's status. The wound is assessed with respect to appropriate healing. The dressing is removed. Any required antibiotics or analgesic medications are prescribed. Orders are written and staff are given instructions. The patient is then established on a schedule for periodic appropriate Pacemaker Clinic visits, as well as transtelephonic monitoring.

|                                 |               | 0.00            |                    |

CPT Descriptor**RELATIONSHIP OF CODE BEING REVIEWED TO KEY REFERENCE SERVICE(S):**

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by the mean) of the service you are rating to the key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

**Number of respondents who choose Key Reference Code: 15      % of respondents: 38.4 %**

**TIME ESTIMATES (Median)**

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The codes related to pacemaker and internal cardioverter-defibrillator (ICD) removal and replacement were identified by the CPT/RUC Joint Workgroup as being commonly reported together in 2009. The American College of Cardiology and the Heart Rhythm Society were instructed to create bundled services that reflected the commonly provided removal and replacement of a

pacemaker or ICD pulse generator. As part of this coding proposal, new codes were added to reflect the availability of pacemakers and ICDs with greater than two leads. A total of 12 codes were created or significantly revised, mandating a RUC survey. ACC and HRS convened a panel of physicians familiar with the services to review the survey data. The survey was robust and was completed by physicians who have experience with each of the services.

Code 3324X1 will be used to report the insertion of a dual lead pacing cardioverter-defibrillator without having first removed another pulse generator. This service will be reported uncommonly. After reviewing the data, the panel felt the survey median of 7.20 adequately represents the physician work for the procedure.

The panel reviewed the preservice time and selected package 3, a straightforward patient and a difficult procedure with sedation. The service is generally performed under IV deep sedation and local anesthesia or under general anesthesia, which is included as part of the code. The package was adjusted to reduce the preservice evaluation time from 33 minutes to 15 minutes to reflect the data from the survey.

The panel noted that the survey showed that the service is commonly performed in a hospital but the patient is sent home the same day. Based on the newly established RUC standard, the panel included a half-day hospital discharge as part of the recommendation as well.

Survey respondents identified a median of 2 follow-up visits for this service, both 99213.

The key reference service is 61886, insertion or replacement of cranial neurostimulator pulse generator or receiver, direct or inductive coupling; with connection to 2 or more electrode arrays. Those who selected the key service felt 3324X1 was more intense/complex than this reference service.

---

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.
- 

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 33240. This service was split into three codes to report the number of leads to be consistent with other device codes.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty cardiology                      How often? Rarely

Specialty                                      How often?

Specialty                                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 503

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2009 Medicare Part B Claims Data. Based on 2009 Medicare Part B Claims Data for the prior code and expert opinion on the distribution of services based on the number of leads.

|           |           |            |   |
|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|

|           |           |            |   |
|-----------|-----------|------------|---|

|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 335

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2009 Medicare Part B Claims Data for the prior code and an extrapolation of an estimated 99% decrease in utilization.

|           |           |            |   |

CPT Descriptor: Insertion of pacing cardioverter-defibrillator pulse generator only with existing; multiple leads

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 62 year patient presents with systolic heart failure and LBBB block. During a separate surgical procedure, right atrial (RA), right ventricular (RV) and left ventricular (LV) leads were placed. The patient requires implantation of a biventricular ICD generator with attachment with existing leads to complete the ICD system.

Percentage of Survey Respondents who found Vignette to be Typical: 73%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 95% , In the ASC 0%, In the office 5%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 73% , Overnight stay-less than 24 hours 27% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 60%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? Yes

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 66%

Is moderate sedation inherent to this procedure in the office setting? Yes

Percent of survey respondents who stated moderate sedation is typical in the office setting? 67%

Description of Pre-Service Work: Patient is evaluated for stability with respect to overall cardiovascular status. A history and multi-system physical exam are obtained. The procedure and its risks are discussed in detail with the patient and patient's family, as well as why pacing is needed, the risks, benefits, indications and alternatives. Mark the incision site and obtain informed consent and answer patient and family questions. Scheduling and follow-up issues are discussed. Medications are often adjusted including insulin, diuretics and anti-coagulants. Monitor the patient positioning and draping and assist with positioning as needed. Scrub and gown. Observe and/or assist in insertion of monitoring lines and induction of anesthesia.

Description of Intra-Service Work: The appropriate pectoral region is prepared and draped in a sterile manner. An incision is made in the subclavicular region and carried to the pectoralis fascia or the subpectoral region. A pocket for the pacemaker generator is created either in the plane of pectoralis fascia or underneath the pectoral muscles just above the ribcage. The existing leads are dissected free from fibrous tissue. Hemostasis is achieved. The leads are tested for sensing, capture threshold and impedance. The pocket is irrigated. The pacing leads are connected to the new generator. The generator is inserted into the pocket. The pocket is closed with either suture alone or a combination of suture and staples or suture and tissue adhesive. Programming of the device is performed.

Description of Post-Service Work: Report dictated and temporary immediate post-op sheet is completed. Family is found and updated on patient's status. The wound is assessed with respect to appropriate healing. The dressing is removed. Any required antibiotics or analgesic medications are prescribed. Orders are written and staff are given instructions. The patient is then established on a schedule for periodic appropriate Pacemaker Clinic visits, as well as transtelephonic monitoring.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The codes related to pacemaker and internal cardioverter-defibrillator (ICD) removal and replacement were identified by the CPT/RUC Joint Workgroup as being commonly reported together in 2009. The American College of Cardiology and the Heart Rhythm Society were instructed to create bundled services that reflected the commonly provided removal and replacement of a

pacemaker or ICD pulse generator. As part of this coding proposal, new codes were added to reflect the availability of pacemakers and ICDs with greater than two leads. A total of 12 codes were created or significantly revised, mandating a RUC survey. ACC and HRS convened a panel of physicians familiar with the services to review the survey data. The survey was robust and was completed by physicians who have experience with each of the services.

Code 3324X2 will be used to report the insertion of a multiple lead pacing cardioverter-defibrillator without having first removed another pulse generator. This service will be reported uncommonly. After reviewing the data, the panel felt the survey median of 7.80 adequately represents the physician work for the procedure.

The panel reviewed the preservice time and selected package 3, a straightforward patient and a difficult procedure with sedation. The service is generally performed under IV deep sedation and local anesthesia or under general anesthesia, which is included as part of the code. The package was adjusted to reduce the preservice evaluation time from 33 minutes to 15 minutes to reflect the data from the survey.

The panel noted that the survey showed that the service is commonly performed in a hospital but the patient is sent home the same day. Based on the newly established RUC standard, the panel included a half-day hospital discharge as part of the recommendation as well.

Survey respondents identified a median of 2 follow-up visits for this service, both 99213.

The key reference service is 61886, insertion or replacement of cranial neurostimulator pulse generator or receiver, direct or inductive coupling; with connection to 2 or more electrode arrays. Those who selected the key service felt 3324X2 was more intense/complex than this reference service.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 33240. This code was split into three codes to reflect the number of leads to be consistent with other device codes

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty cardiology                      How often? Rarely

Specialty                      How often?

Specialty

How often?

Estimate the number of times this service might be provided nationally in a one-year period? 503

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2009 Medicare Part B Claims Data for the prior code and expert opinion on the distribution of services based on the number of leads.

|           |           |            |   |

|-----------|-----------|------------|---|
| Specialty | Frequency | Percentage | % |
|-----------|-----------|------------|---|

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 335

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2009 Medicare Part B Claims Data for the prior code and an extrapolation of an estimated 99% decrease in utilization.

|           |           |            |   |

|-----------|-----------|------------|---|

Do many physicians perform this service across the United States?

### Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 33223

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 33262      Tracking Number   U10

Original Specialty Recommended RVU: **7.00**Presented Recommended RVU: **6.06**

Global Period: 090

RUC Recommended RVU: **6.06**

CPT Descriptor: Removal of pacing cardioverter-defibrillator pulse generator with replacement of pacing cardioverter-defibrillator pulse generator; single lead system

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 60-year-old patient presents with systolic congestive heart failure (CHF) from prior myocardial infarction whose implantable cardioverter-defibrillator (ICD) is at elective replacement indicator. The patient has no signs of systemic infection or unstable coronary syndrome.

Percentage of Survey Respondents who found Vignette to be Typical: 93%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 95% , In the ASC 0%, In the office 5%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 83% , Overnight stay-less than 24 hours 17% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 57%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? Yes

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 62%

Is moderate sedation inherent to this procedure in the office setting? Yes

Percent of survey respondents who stated moderate sedation is typical in the office setting? 67%

Description of Pre-Service Work: Patient is evaluated for stability with respect to overall cardiovascular status. A history and multi-system physical exam are obtained. The procedure and its risks are discussed in detail with the patient and patient's family, as well as why pacing is needed, the risks, benefits, indications and alternatives. Mark the incision site and obtain informed consent and answer patient and family questions. Scheduling and follow-up issues are discussed. Medications are often adjusted including insulin, diuretics and anti-coagulants. Monitor the patient positioning and draping and assist with positioning as needed. Scrub and gown. Observe and/or assist in insertion of monitoring lines and induction of anesthesia.

Description of Intra-Service Work: The appropriate pectoral region is prepared and draped in a sterile manner. An incision is made of the existing generator and carried down to the level of the capsule surrounding the generator. The existing generator is dissected free and the lead is freed from fibrous scar tissue. This must be performed in a manner preventing damage to the lead. Often extensive removal of scar tissue/capsule is required. During the procedure adequate hemostasis and sterility are maintained. The existing lead is tested to assess the adequacy, including capture threshold, sensing and impedance. The pocket may need to be modified to accommodate the shape and size of the new generator. The pocket is copiously irrigated. The new generator is inserted in the pocket and attached to the existing lead. The pocket is closed with either suture alone or a combination of suture and staples or suture and tissue adhesive. Programming of the device is performed.

Description of Post-Service Work: Report dictated and temporary immediate post-op sheet is completed. Family is found and updated on patient's status. The wound is assessed with respect to appropriate healing. The dressing is removed. Any required antibiotics or analgesic medications are prescribed. Orders are written and staff are given instructions. The

patient is then established on a schedule for periodic appropriate Pacemaker Clinic visits, as well as transtelephonic monitoring.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The codes related to pacemaker and internal cardioverter-defibrillator (ICD) removal and replacement were identified by the CPT/RUC Joint Workgroup as being commonly reported together in 2009. The American College of Cardiology and the Heart Rhythm Society were instructed to create bundled services that reflected the commonly provided removal and replacement of a pacemaker or ICD pulse generator. As part of this coding proposal, new codes were added to reflect the availability of pacemakers and ICDs with greater than two leads. A total of 12 codes were created or significantly revised, mandating a RUC survey. ACC and

HRS convened a panel of physicians familiar with the services to review the survey data. The survey was robust and was completed by physicians who have experience with each of the services.

Code 3324XX1 will be used to report the insertion of a single lead pacing cardioverter-defibrillator after first removing another pulse generator, typically at the end of its service life. After reviewing the data, the panel felt the survey median of 7.00 adequately represents the physician work for the procedure. It also eliminates redundancies that may exist under the current convention of reporting 33240 with 33241 for this service. The current value of 9.29 was calculated based on a 50% reduction placed on the lesser valued code as part of a multiple procedure edit.

The panel reviewed the preservice time and selected package 3, a straightforward patient and a difficult procedure with sedation. The service is generally performed under IV deep sedation and local anesthesia or under general anesthesia, which is included as part of the code. The package was adjusted to reduce the preservice evaluation time from 33 minutes to 15 minutes to reflect the data from the survey.

The panel noted that the survey showed that the service is commonly performed in a hospital but the patient is sent home the same day. Based on the newly established RUC standard, the panel included a half-day hospital discharge as part of the recommendation as well.

Survey respondents identified a median of 2 follow-up visits for this service, both 99213.

The key reference service is 33223, revision of skin pocket for cardioverter-defibrillator. Those who selected the key service felt 3324XX1 was more intense/complex than this reference service.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) Previously reported as a combination of codes 33241 and 33240 but was identified as a service commonly performed together by the Relativity Assessment Workgroup. Codes were split to reflect different work associated with different numbers of leads.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty cardiology                      How often? Commonly

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 10063

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2009 Medicare Part B Claims Data.

|           |           |            |   |

Do many physicians perform this service across the United States? Yes

### Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 33223

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 33263      Tracking Number   U11

Original Specialty Recommended RVU: **8.00**Presented Recommended RVU: **6.33**

Global Period: 090

RUC Recommended RVU: **6.33**

CPT Descriptor: Removal of pacing cardioverter-defibrillator pulse generator with replacement of pacing cardioverter-defibrillator pulse generator; dual lead system

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 70-year-old patient with systolic congestive heart failure (CHF) from prior myocardial infarction (MI), who also has bradycardia, presents with an implantable cardioverter-defibrillator (ICD) at elective replacement indicator. The patient has no signs of systemic infection or unstable coronary syndrome.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 95% , In the ASC 0%, In the office 5%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 85% , Overnight stay-less than 24 hours 15% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 67%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? Yes

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 63%

Is moderate sedation inherent to this procedure in the office setting? Yes

Percent of survey respondents who stated moderate sedation is typical in the office setting? 67%

Description of Pre-Service Work: Patient is evaluated for stability with respect to overall cardiovascular status. A history and multi-system physical exam are obtained. The procedure and its risks are discussed in detail with the patient and patient's family, as well as why pacing is needed, the risks, benefits, indications and alternatives. Mark the incision site and obtain informed consent and answer patient and family questions. Scheduling and follow-up issues are discussed. Medications are often adjusted including insulin, diuretics and anti-coagulants. Monitor the patient positioning and draping and assist with positioning as needed. Scrub and gown. Observe and/or assist in insertion of monitoring lines and induction of anesthesia.

Description of Intra-Service Work: The appropriate pectoral region is prepared and draped in a sterile manner. An incision is made of the existing generator and carried down to the level of the capsule surrounding the generator. The existing generator is dissected free and the leads are freed from fibrous scar tissue. Often extensive removal of scar tissue/capsule is required. This must be performed in a manner preventing damage to the leads. During the procedure adequate hemostasis and sterility are maintained. The existing leads are tested to assess the adequacy, including capture threshold, sensing and impedance. The pocket may need to be modified to accommodate the shape and size of the new generator. The pocket is copiously irrigated. The new generator is inserted in the pocket and attached to the existing leads. The pocket is closed with either suture alone or a combination of suture and staples or suture and tissue adhesive. Programming of the device is performed.

Description of Post-Service Work: Report dictated and temporary immediate post-op sheet is completed. Family is found and updated on patient's status. The wound is assessed with respect to appropriate healing. The dressing is removed. Any required antibiotics or analgesic medications are prescribed. Orders are written and staff are given instructions. The

patient is then established on a schedule for periodic appropriate Pacemaker Clinic visits, as well as transtelephonic monitoring.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The codes related to pacemaker and internal cardioverter-defibrillator (ICD) removal and replacement were identified by the CPT/RUC Joint Workgroup as being commonly reported together in 2009. The American College of Cardiology and the Heart Rhythm Society were instructed to create bundled services that reflected the commonly provided removal and replacement of a pacemaker or ICD pulse generator. As part of this coding proposal, new codes were added to reflect the availability of pacemakers and ICDs with greater than two leads. A total of 12 codes were created or significantly revised, mandating a RUC survey. ACC and

HRS convened a panel of physicians familiar with the services to review the survey data. The survey was robust and was completed by physicians who have experience with each of the services.

Code 3324XX2 will be used to report the insertion of a dual lead pacing cardioverter-defibrillator after first removing another pulse generator, typically at the end of its service life. After reviewing the data, the panel felt the survey median of 8.00 adequately represents the physician work for the procedure. It also eliminates redundancies that may exist under the current convention of reporting 33240 with 33241 for this service. The current value of 9.29 was calculated based on a 50% reduction placed on the lesser valued code as part of a multiple procedure edit.

The panel reviewed the preservice time and selected package 3, a straightforward patient and a difficult procedure with sedation. The service is generally performed under IV deep sedation and local anesthesia or under general anesthesia, which is included as part of the code. The package was adjusted to reduce the preservice evaluation time from 33 minutes to 15 minutes to reflect the data from the survey.

The panel noted that the survey showed that the service is commonly performed in a hospital but the patient is sent home the same day. Based on the newly established RUC standard, the panel included a half-day hospital discharge as part of the recommendation as well.

Survey respondents identified a median of 2 follow-up visits for this service, both 99213.

The key reference service is 33223, revision of skin pocket for cardioverter-defibrillator. Those who selected the key service felt 3324XX2 was more intense/complex than this reference service.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) Previously reported as a combination of codes 33241 and 33240 but was identified as a service commonly performed together by the Relativity Assssment Workgroup.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty cardiology                      How often? Commonly

Specialty                                      How often?

Specialty                                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 25158

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2009 Medicare Part B Claims Data for the prior code and expert opinion on the percentage of codes that will be reported with single, dual, or multiple leads.

Do many physicians perform this service across the United States? Yes

### Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 33223

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 33264      Tracking Number   U12

Original Specialty Recommended RVU: **8.50**Presented Recommended RVU: **6.60**

Global Period: 090

RUC Recommended RVU: **6.60**

CPT Descriptor: Removal of pacing cardioverter-defibrillator pulse generator with replacement of pacing cardioverter-defibrillator pulse generator; multiple lead system

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 73-year-old patient with systolic congestive heart failure (CHF), Class III symptoms and left bundle branch block (LBBB) who presents with an implantable cardioverter-defibrillator (ICD) at elective replacement indicator. The patient has no signs of systemic infection.

Percentage of Survey Respondents who found Vignette to be Typical: 92%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 95% , In the ASC 0%, In the office 5%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 82% , Overnight stay-less than 24 hours 18% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 71%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? Yes

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 62%

Is moderate sedation inherent to this procedure in the office setting? Yes

Percent of survey respondents who stated moderate sedation is typical in the office setting? 67%

Description of Pre-Service Work: Patient is evaluated for stability with respect to overall cardiovascular status. A history and multi-system physical exam are obtained. The procedure and its risks are discussed in detail with the patient and patient's family, as well as why pacing is needed, the risks, benefits, indications and alternatives. Mark the incision site and obtain informed consent and answer patient and family questions. Scheduling and follow-up issues are discussed. Medications are often adjusted including insulin, diuretics and anti-coagulants. Monitor the patient positioning and draping and assist with positioning as needed. Scrub and gown. Observe and/or assist in insertion of monitoring lines and induction of anesthesia.

Description of Intra-Service Work: The appropriate pectoral region is prepared and draped in a sterile manner. An incision is made of the existing generator and carried down to the level of the capsule surrounding the generator. The existing generator is dissected free and the leads are freed from fibrous scar tissue. Often extensive removal of scar tissue/capsule is required. This must be performed in a manner preventing damage to the leads. During the procedure adequate hemostasis and sterility are maintained. The existing leads are tested to assess the adequacy, including capture threshold, sensing and impedance. The pocket may need to be modified to accommodate the shape and size of the new generator. The pocket is copiously irrigated. The new generator is inserted in the pocket and attached to the existing leads. The pocket is closed with either suture alone or a combination of suture and staples or suture and tissue adhesive. Programming of the device is performed.

Description of Post-Service Work: Report dictated and temporary immediate post-op sheet is completed. Family is found and updated on patient's status. The wound is assessed with respect to appropriate healing. The dressing is removed. Any required antibiotics or analgesic medications are prescribed. Orders are written and staff are given instructions. The

patient is then established on a schedule for periodic appropriate Pacemaker Clinic visits, as well as transtelephonic monitoring.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The codes related to pacemaker and internal cardioverter-defibrillator (ICD) removal and replacement were identified by the CPT/RUC Joint Workgroup as being commonly reported together in 2009. The American College of Cardiology and the Heart Rhythm Society were instructed to create bundled services that reflected the commonly provided removal and replacement of a pacemaker or ICD pulse generator. As part of this coding proposal, new codes were added to reflect the availability of pacemakers and ICDs with greater than two leads. A total of 12 codes were created or significantly revised, mandating a RUC survey. ACC and

HRS convened a panel of physicians familiar with the services to review the survey data. The survey was robust and was completed by physicians who have experience with each of the services.

Code 3324XX3 will be used to report the insertion of a multiple lead pacing cardioverter-defibrillator after first removing another pulse generator, typically at the end of its service life. After reviewing the data, the panel felt the survey median of 8.50 adequately represents the physician work for the procedure. It also eliminates redundancies that may exist under the current convention of reporting 33240 with 33241 for this service. The current value of 9.29 was calculated based on a 50% reduction placed on the lesser valued code as part of a multiple procedure edit.

The panel reviewed the preservice time and selected package 3, a straightforward patient and a difficult procedure with sedation. The service is generally performed under IV deep sedation and local anesthesia or under general anesthesia, which is included as part of the code. The package was adjusted to reduce the preservice evaluation time from 33 minutes to 15 minutes to reflect the data from the survey.

The panel noted that the survey showed that the service is commonly performed in a hospital but the patient is sent home the same day. Based on the newly established RUC standard, the panel included a half-day hospital discharge as part of the recommendation as well.

Survey respondents identified a median of 2 follow-up visits for this service, both 99213.

The key reference service is 33223, revision of skin pocket for cardioverter-defibrillator. Those who selected the key service felt 3324XX2 was more intense/complex than this reference service.

---

## SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.
- 

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) Previously reported as a combination of codes 33241 and 33240 but was identified as a service commonly performed together by the Relativity Assssment Workgroup.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty cardiology                      How often? Commonly

Specialty                                      How often?

Specialty                                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 15095

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2009 Medicare Part B Claims Data for the prior code

Do many physicians perform this service across the United States?

### Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 33223

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*Identified as part of the Fourth Five-Year Review*

September 2011

**Psychoanalysis**

Multiple specialty societies submitted public comment to CMS to review code 90845 *Psychoanalysis* as part of the 4<sup>th</sup> Five-Year Review. In September 2010, recommendations regarding code 90845 were submitted along with 16 additional codes. During that presentation the specialties requested that the entire tab be referred to the CPT Editorial Panel to revised the code descriptors to more accurately describe these services. During the CPT review process, CPT recommended to remove psychoanalysis, as revisions to the descriptor were unnecessary because the work inherent in providing this service was the same regardless of the provider.

In September 2011, the RUC reviewed 90845 and agreed with the specialty society that there is compelling evidence that the patient population has changed and that the technique employed in psychoanalytic practice has changed. Psychoanalysis traditionally treated a wide variety of conditions which included a considerable number of high functioning patients who were treated for relatively minor psychological problems by current standards. Patients with these conditions are now often treated in a variety of newer treatment modalities rather than psychoanalysis. Given this, patients now receiving psychoanalysis are more complex and typically require a more active approach on part of the psychoanalyst due to the increased number of co-morbidities. In addition, in the past psychoanalysts tended to be silent during the treatment, intervening infrequently. Current practice emphasizes the importance of interaction between the psychoanalyst and the patient. As a result of this technical change the psychoanalyst is required to be much more intently focused on the minute to minute interaction during the session and considerably more active during the session. This substantially increases the psychoanalyst's intensity and complexity effort during the session, when compared with the earlier model.

The RUC reviewed CPT code 90845 and agreed with the specialty societies that the typical service is one hour, 5 minute pre-service, 50 minutes intra-service and 5 minutes immediate post-service time. The RUC reviewed the survey results and agreed that the median survey work RVU of 2.10 accurately values the typical physician work involved in the procedure. To justify this value, the RUC compared CPT code 90845 to key reference service 99404 *Preventive medicine counseling and/or risk factor reduction intervention(s) provided to an individual (separate procedure); approximately 60 minutes* (work RVU = 1.95, total time = 60 minutes). Although the reference code has greater intra service time compared to the surveyed code, the survey respondents indicated and the RUC agreed that intensity and complexity to perform 90845 is greater in every measure compared to reference service 99404. The RUC also compared 90845 to reference code 99215 *Office or other outpatient visit for the evaluation and management of an established patient* (work RVU = 2.11, total time = 55 minutes). The respondents indicated 90845 was more intense and complex than 99215, specifically the technical skill required to perform 90845 indicated the greatest difference. Finally, the RUC

compared 90845 to MPC code 99233 *Subsequent hospital care, per day, for the evaluation and management of a patient* (work RVU = 2.00, total time = 55 minutes). The RUC determined that these comparison codes coupled with the median survey results support a recommendation of 2.10 work RVUs for CPT code 90845. **The RUC recommends a work RVU of 2.10 for CPT code 90845.**

CPT Descriptor: Psychoanalysis

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 37-year-old man with dysthymia and narcissistic personality disorder manifested by entitlement, inability to be intimate, and extreme variability of self esteem is seen in the second year of psychoanalysis, just prior to going on a business trip. Argumentative and easily offended, he accuses the analyst of being insensitive and detached, and angrily rejects any effort to explore the basis of his mood or behavior.

Percentage of Survey Respondents who found Vignette to be Typical: 81%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Kept overnight (less than 24 hours) 0% , Admitted (more than 24 hours) 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 2%

Is moderate sedation inherent in your reference code (Office setting)? No

Is moderate sedation inherent in your reference code (Hospital/ASC setting)? No

Description of Pre-Service Work: Preparing to see patient; refreshing memory about recent sessions; assessing and managing one's own psychological reactions to the patient.

Description of Intra-Service Work: In person therapeutic communication with patient; implicitly obtaining information and observing the patient's mental state; evaluating and exploring the intensity of symptoms, feelings, thoughts, conflicts, fantasies, behaviors, and dreams as necessary; exploring the patient's and one's own feelings, fantasies and thoughts about the evolving therapeutic relationship as a model for gaining perspective on significant difficulties in the patient's other relationships (transference and countertransference); introducing the impact of the patient's engagement on the analyst as a data source for grasping the patient's effects on other relationships; providing psychological interpretations regarding defenses, conflicts and tendencies in patient's personality and relationships, including awareness of mental process, self-esteem, self-regulation, and impulse control; addressing impediments to ongoing behavioral change that could reduce distress and promote well-being.

Description of Post-Service Work: Documenting the services provided intra-service including reviewing content and process of session, reflection on the psychoanalyst's reactions to the patient's affects, communications and behavior in the session and identifying issues requiring follow-up at next/future sessions; related consultation with peers and review of literature pertinent to the case.

**KEY REFERENCE SERVICE:**

| <u>Key CPT Code</u> | <u>Global</u> | <u>Work RVU</u> | <u>Time Source</u> |
|---------------------|---------------|-----------------|--------------------|
| 99404               | XXX           | 1.95            | RUC Time           |

CPT Descriptor Preventive medicine counseling and/or risk factor reduction intervention(s) provided to an individual (separate procedure); approximately 60 minutes

**KEY MPC COMPARISON CODES:**

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

| <u>MPC CPT Code 1</u> | <u>Global</u> | <u>Work RVU</u> | <u>Time Source</u> | <u>Most Recent Medicare Utilization</u> |
|-----------------------|---------------|-----------------|--------------------|-----------------------------------------|
| 99215                 | XXX           | 2.11            | RUC Time           | 10,112,992                              |

CPT Descriptor 1 Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Physicians typically spend 40 minutes face-to-face with the patient and/or family

| <u>MPC CPT Code 2</u> | <u>Global</u> | <u>Work RVU</u> | <u>Time Source</u> | <u>Most Recent Medicare Utilization</u> |
|-----------------------|---------------|-----------------|--------------------|-----------------------------------------|
| 99233                 | XXX           | 2.00            | RUC Time           | 21,952,122                              |

CPT Descriptor 2 Subsequent hospital care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: A detailed interval history; A detailed examination; Medical decision making of high complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is unstable or has developed a significant complication or a significant new problem. Physicians typically spend 35 minutes at the bedside and on the patient's hospital floor or unit

| <u>Other Reference CPT Code</u> | <u>Global</u> | <u>Work RVU</u> | <u>Time Source</u> |
|---------------------------------|---------------|-----------------|--------------------|
| 99387                           | XXX           | 2.06            | RUC Time           |

CPT Descriptor Initial comprehensive preventive medicine evaluation and management of an individual including an age and gender appropriate history, examination, counseling/anticipatory guidance/risk factor reduction interventions, and the ordering of laboratory/diagnostic procedures, new patient; 65 years and older

**RELATIONSHIP OF CODE BEING REVIEWED TO KEY REFERENCE SERVICE(S):**

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by the mean) of the service you are rating to the key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

**Number of respondents who choose Key Reference Code: 17      % of respondents: 32.0 %**

**TIME ESTIMATES (Median)**

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

**Background**

Psychoanalysis, CPT code 90845, was put forward along with a majority of the codes within the psychiatry section of CPT as part of the fourth Five-Year Review process. As noted in the attached letter from the specialty societies, we believe there has been a change in the work required in this service. Our letter to CMS highlights the changes in the patient population with references substantiating the increased complexity of the patients. We have also provided additional information under the section on compelling evidence for changes in technique since this code was last reviewed by the RUC in 1995.

Recommendations regarding this code were originally submitted for the September 2010 RUC meeting along with 16 additional codes that were identified as being misvalued. During that presentation the specialties requested that entire tab be referred to the CPT Editorial Panel to more accurately describe the service. The RUC supported the referral to CPT and a CPT Workgroup was established to address these issues.

During the review process, a recommendation was made to remove psychoanalysis from the CPT Workgroup process and forward it on to the RUC for review. It was the opinion of all of the provider groups that the work inherent in providing psychoanalysis was the same regardless of who was performing the procedure and there was no need to further refine the descriptor for that service. A request was made and granted by the AMA RUC staff to add this to code to the RUC's September agenda using the data from our original survey.

### Survey Process and Data

The following three groups surveyed 90845: the American Psychiatric Association (Psychiatry), the American Psychological Association (Psychology) and the National Association of Social Workers (Social Work). The survey included two separate reference service lists (RSL), one used by the psychiatry, and one used by the psychology and social work. The separate RSL's were reviewed and approved by the RUC Research Subcommittee. Together the societies convened a joint society expert panel ("expert panel") to review the survey data and make recommendations.

### Analysis and recommendations from the expert panel

**Time:** The survey median results regarding time are 10 minutes pre, 50 minutes intra, and 10 minutes post service. The expert panel supported the median time of 50 minutes for the intra-service time however thought that the median values for the pre and post service times were an overestimation. According to the experts, the patient is typically seen face to face for 50 minutes and the total encounter lasts approximately 60 minutes. The panel reviewed the 25th percentile of 5 minutes of pre and 5 minutes for post service work and agreed these times were more representative of what typically occurs. The 5 minutes of pre and post time combined with the intra-service time of 50 minutes results in a total time of 60 minutes. **Therefore we recommend 5 minutes pre, 50 minutes intra and 5 minutes post service time for a total time of 60 minutes.**

**RVW:** As noted above, two separate reference service lists were used for this survey effort resulting in two different codes being selected as the key reference service. Responses by psychologists and social workers who were using a common reference service list outnumbered the responses by psychiatrists which impacted the selection of the key reference service.

The expert panel reviewed the number of times each specialty billed this code using the RUC database and compared it to the response rate by specialty to the RUC survey. They found that psychiatry was under-represented and psychology and social work over-represented in the results.

| Specialty   | 2010 Medicare Claims<br>(Frequency) |          | Percentage of<br>Responses by Specialty | RVW<br>Median | Median Time |       |      |            |
|-------------|-------------------------------------|----------|-----------------------------------------|---------------|-------------|-------|------|------------|
|             | %                                   | # Claims |                                         |               | Pre         | Intra | Post | Total Time |
| Psychiatry  | 50%                                 | 2709     | 36%                                     | 2.50          | 5           | 50    | 10   | 65         |
| Psychology  | 36%                                 | 1950     | 43%                                     | 2.10          | 10          | 55    | 10   | 75         |
| Social Work | 0.12%                               | 7        | 21%                                     | 1.95          | 15          | 50    | 15   | 80         |

The key reference service for the combined survey results was 99404, *Preventive medicine counseling and/or risk factor reduction intervention(s) provided to an individual (separate procedure); approximately 60 minutes* (RVW of 1.95 with time of 0, 60, 0, pre, intra and post respectively and a total time of 60 minutes) which was selected by 17 of the 34 psychologists and social workers completing the survey.

An analysis of the intensity and complexity measures shows that respondents thought the intensity and complexity of the work of psychoanalysis was greater in every measure – in particular technical skill (4.53 for 90845 and 3.65 for 99404) and

outcome (4.65 for 90845 and 3.76 for 99404) -- than the key reference service except one, physical effort, validating the median value of 2.10.

Six of the 19 psychiatrists responding to the survey chose CPT code 99215, *Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Physicians typically spend 40 minutes face-to-face with the patient and/or family* (RVW of 2.11, with times of 5, 35, 15 pre, intra and post respectively and a total time of 55 minutes) as the key reference service.

Again, an analysis of the intensity and complexity measures show that respondents indicated that the work was more intense and/or complex in a majority of the categories, again with the greatest difference in the area of technical skill required (4.83 for 90845 and 3.83 for 99215) and outcome dependent on the skill and judgment of the physician (4.50 for 90845 and 3.50 for 99215), further substantiating the median RVW of 2.10.

The expert panel concurred with the survey median RVW of 2.10, agreeing that psychoanalysis was more intense, required greater technical effort and relied more heavily on the skill and judgment of the clinician than the key reference services cited.

The current RVW for 90845 is 1.79, we guide you to the compelling evidence section for details regarding two compelling evidence criteria which the expert panel believed were met - changes in physician work due to patient population and technique. In addition to the reference service codes identified above, the following service is provided for comparison to support our recommended RVW and times:

CPT 99233, *Subsequent hospital care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: A detailed interval history; A detailed examination; Medical decision making of high complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is unstable or has developed a significant complication or a significant new problem. Physicians typically spend 35 minutes at the bedside and on the patient's hospital floor or unit, with a work RVW of 2.00 and 55 minutes of total time (10 pre, 30 intra, 15 post service).*

This comparison code, coupled with the median survey results, supports our recommendation of the median value of 2.10 for 90845, Psychoanalysis. **Therefore we recommend the median RVW of 2.10 with times of 5 pre, 50 intra and 5 post service for a total time of 60 minutes.**

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

**Professional Liability Insurance Information (PLI)**

Does the reference CPT code selected for physician work serve as a reasonable reference for PLI crosswalk? (ie. similar work RVU, and specialty) No

If no, please select another crosswalk and provide a brief rationale. 90845

Indicate what risk factor the new/revised code should be assigned to determine PLI relative value. Non-Surgical

**Compelling Evidence**

The RUC operates with the initial presumption that the current values assigned to the codes under review are correct. The argument for a change must be substantial and meet the RUC's compelling evidence standards listed in the Instructions Document. Please list your compelling evidence below (if appropriate).

As noted in the letter to CMS, psychoanalysis and the other codes within the psychiatry section were identified by the specialty societies as being misvalued predominately because of changes in the patient population and in the case of psychoanalysis, due to changes to the technique since the code was originally valued in 1995 as described below. The following outlines those changes in addition to the original arguments in the letter to CMS as part of the five-year review process.

(1) Change in the patient population: Psychoanalysts traditionally treated a wide variety of conditions which included a considerable number of high functioning patients who came to treatment for what might be regarded today as relatively minor psychological problems. Patients with such conditions are now often treated in a variety of newer treatment modalities (such as short term cognitive-behavioral and psychodynamic psychotherapies, CPT 90806 or 90807) rather than psychoanalysis. As a result there has been a change in the overall severity of the clinical population engaged in full psychoanalytic treatment (CPT 90845) with an increased number of patients suffering from narcissistic and borderline conditions, as well as patients with dual diagnoses, including bipolar disorder and some forms of substance abuse. Such patients tend to be more unstable both within and outside the treatment setting, and may require a much more active approach on the part of the psychoanalyst. This change in the overall composition of the patient population has resulted in a greater degree of work effort on the part of psychoanalysts, as well as increased stress borne out of concern for possible transitory negative effects (including transitory increases in suicidal ideation) which may occur as an effect of such intensive treatment and which must be carefully managed.

(2) Change in the technique employed in psychoanalytic practice: Traditionally, psychoanalytic treatment (CPT 90845) had been based in a model originated in theoretical writings of Freud and carried into actual practice by psychoanalysts during the mid-20th century. In this model the analyst tended to be silent a great deal of the time, listening closely to the patient's associations and intervening sparsely with interpretations with the aim of augmenting the patient's self-understanding. As a result of growing understanding of the actual role of the psychoanalyst's presence in the session the focus has shifted to a greater emphasis on the interaction between the psychoanalyst and the patient as the data for gaining understanding of the patient's internal dynamics. Technically, this focus on the interpersonal process between them is a further development of the fundamental concepts of transference, counter-transference, and therapeutic change. This technical change had already started to become evident in the 1990's but is now a widely regarded important feature of psychoanalytic treatment. As a result of this technical change the psychoanalyst is required to be much more intently focused on the minute to minute interaction during the session, considerably more active during the session, and much more focused on his or her internal feeling states both within and between the analytic sessions. This substantially increases the psychoanalyst's intensity and complexity effort during the session, when compared with the earlier model.

**Five-Year Review Specific Questions**

Please indicate the number of survey respondent percentages responding to each of the following questions (for example 0.05 = 5%).

Has the work of performing this service changed in the past 5 years? Yes 40% No 60%

A. This service represents new technology? Yes 33% No 67%

Of survey respondents, who said yes, the new technology affected the work:

Less Work: 0% Same Work: 0% More Work: 100%

B. This service reflects new technology that has become more familiar: Yes 14% No 86%

C. Patients requiring this service are now:

More complex (more work) 90% Less complex (less work) 0% No change in complexity 10%

D. The typical site-of-service has changed:

From outpatient to inpatient 10% From inpatient to outpatient 10% No change 80%

Charlene M. Frizzera  
Acting Administrator  
Centers for Medicare and Medicaid Services  
Department of Health and Human Services  
Attention: CMS-1413-FC  
P.O. Box 8013  
Baltimore, MD, 21244-8013

Submitted electronically at <http://www.regulations.gov>

Dear Ms. Frizzera:

The American Psychological Association (APA), the National Association of Social Workers (NASW), the American Nurses Association (ANA), and the American Psychiatric Nurses Association (APNA) are writing in response to the final rule with comment period on "Medicare Program; Payment Policies under the Physician Fee Schedule and Other Revisions to Part B for CY 2010," as published in the *Federal Register* on November 25, 2009. Specifically, we are writing to request that the Centers for Medicare and Medicaid Services (CMS) review the work relative value units (RVUs) of the following codes within the Psychiatry section of CPT®<sup>1</sup> during the Five-Year Review of the Medicare Fee Schedule:

Psychiatric Diagnostic or Evaluative Interview Procedures  
90801, 90802

Office or Other Outpatient Facility Psychotherapy  
90804, 90806, 90808, 90810, 90812, 90814

Inpatient Hospital, Partial Hospital or Residential Care Facility Psychotherapy  
90816, 90818, 90821, 90823, 90826, 90828

Other Psychotherapy  
90845, 90846, 90847, 90849, 90853, 90857

Other Psychiatric Services or Procedures  
90875, 90876, 90880

The descriptors for these codes are provided in Attachment A. The American Psychiatric Association (Psychiatry), American Academy of Child & Adolescent Psychiatry (Child Psychiatry) and ANA will address having the codes for psychotherapy with evaluation and management (E/M) included in the Five-Year Review in a separate letter.

## **Compelling evidence demonstrating the need to review the psychotherapy codes**

The professional work for these services has changed significantly since the codes were last reviewed. In addition, rank order anomalies exist among the codes, and the codes were originally valued using problematic assumptions. For these reasons and as discussed below, the codes are now undervalued relative to other services in the physician fee schedule and should be reviewed. Lastly, the Omnibus Reconciliation Act of 1990 requires a comprehensive review of all CPT codes at least every five years in order to make any needed adjustments. The psychotherapy codes should be part of the Five-Year Review as they have not been evaluated since last surveyed over ten years ago.

### **I. Changes in the work involved in providing psychotherapy**

The professional work involved in providing psychotherapy has changed significantly since the codes were last valued in 1998. We begin discussion with a short common understanding of psychotherapy and psychotherapeutic practice techniques and then demonstrate how this work has changed based on factors suggested by the AMA/ Specialty Society Relative Value Scale Update Committee (RUC) as evidence of this change.

As defined in the CPT® manual, psychotherapy is the treatment for mental illness and behavioral disturbances in which the clinician establishes a professional contract with the patient and, through definitive therapeutic communication, attempts to alleviate the emotional disturbances, reverse or change maladaptive patterns of behavior, and encourage personality growth and development.<sup>ii</sup>

There are many different modalities of psychotherapy with the following among the most common. *Psychodynamic orientations* place a premium on self-understanding, with the assumption that increased self-understanding will produce salutary changes in the patient. *Humanistic orientations* are also designed to increase self-understanding but use treatment techniques that often are much more active than those likely employed by the psychodynamic clinician. *Behavioral orientations* are geared toward action, with a clear attempt to mobilize the resources of the patient in the direction of change, whether or not there is any understanding of the etiology of the problem. *Cognitive-behavioral therapy* is an integrated approach that focuses on changing the patient's thoughts and beliefs to promote adaptive behavior.<sup>iii</sup> *Interpersonal psychotherapy* is a short term therapy used most often to treat depression. It focuses on the interpersonal events (such as interpersonal disputes / conflicts, interpersonal role transitions, complicated grief that goes beyond the normal bereavement period) that seem to be most important in the onset and / or maintenance of the disorder.<sup>iv</sup>

### **Knowledge /Technology**

Furnishing psychotherapy involves more work now than when the codes were first valued as psychologists, psychiatrists, clinical social workers, psychiatric/mental health advanced practice registered nurses (APRNs), and other mental health care professionals must have a greater awareness of the needs of patients with comorbid conditions. The term "comorbid

conditions” means having more than one mental or physical disorder, including substance abuse.

According to a National Comorbidity Survey, 56% of those with any disorder had two or more. Of these, 27% had two disorders, while 29% had three or more.<sup>v</sup> Comorbidity also implies interactions between the disorders that affect the course and prognosis of each one.<sup>vi</sup> Psychologists, psychiatrists, clinical social workers, psychiatric/mental health APRNs, and other mental health care professionals must be aware of the potential interactions when providing psychotherapy to patients with comorbid conditions.

The work in treating patients with comorbid conditions is further complicated by the fact that most researched treatment protocols were designed for single disorders. While many randomized controlled trials for research purposes have focused on patients with a single, specific disorder, community and clinical samples indicate that comorbidity is the norm rather than the exception. Therefore, simple extrapolation from research studies is insufficient. Data suggests that psychologists, psychiatrists, clinical social workers, psychiatric/mental health APRNs, and other mental health care professionals using a variety of different theoretical orientations attend to their patients’ comorbid symptoms and adjust their intervention strategies accordingly.<sup>vii</sup>

The American Psychological Association Practice Organization (APAPO) represents psychologists in clinical practice. In a November 2008 APAPO survey, 4,843 psychologists practicing for at least ten years were asked to take part in a survey about changes in their practice patterns since 1998.<sup>viii</sup> The survey process employed the standard sampling strategies that APA uses for all data collection resulting in a random pool of members being invited to participate. APAPO received surveys from 1,040 psychologists for a response rate of 21%.

Seventy-nine percent of psychologists responding to the survey said that care is more complex now due to patients’ existing comorbid mental health disorders or a mental health disorder and a major / chronic physical disorder. Fifty percent of the respondents reported that at least a quarter of their patients have major or chronic physical health disorders. Forty-two percent reported an increase in the number of patients with comorbid physical and mental health disorders. Respondents also indicated that on average forty percent of their patients had comorbid mental health disorders.

#### Treating patients with comorbid mental health and substance abuse conditions

A high prevalence of comorbid mental disorders and substance abuse has been documented in multiple national population surveys. Data show that persons diagnosed with mood, anxiety, or antisocial personality disorders, were about twice as likely to also have drug problems. Similarly, persons diagnosed with drug disorders were roughly twice as likely to also suffer from mood and anxiety disorders.<sup>ix</sup>

The Substance Abuse and Mental Health Services Administration (SAMHSA) has recorded the increase in comorbid conditions. According to SAMHSA’s Treatment Episode Data Set,

admissions for patients with comorbid substance abuse and mental disorders rose from 12% in 1995 to 16% in 2001.<sup>x</sup>

SAMHSA's 2002 National Survey on Drug Use and Health (NSDUH) found that 17.5 million adults aged 18 or older were estimated to have a serious mental illness in the past year. About 4 million of these seriously mentally ill adults also were dependent on or abused alcohol or an illicit drug.<sup>xi</sup> The 2005 NSDUH found that 24.5 million adults aged 18 or older had a serious mental illness in the past year and that 5.2 million adults suffered from both a mental illness and substance dependence or abuse.<sup>xii</sup>

Because of this high rate of comorbidity, a psychologist, psychiatrist, clinical social worker, psychiatric/mental health APRN, or other mental health care professional assessing a patient must incorporate into the decision-making knowledge of both types of conditions to determine if a patient presenting with a mental disorder also has a substance abuse disorder and vice versa. They also need to educate themselves about the most effective behavioral techniques for treating substance abuse. Patients with both a substance abuse disorder and a mental illness often exhibit symptoms that are more persistent, severe, and resistant to treatment compared with patients who have either disorder alone.<sup>xiii</sup>

#### Treating patients with comorbid mental and physical health conditions

The co-occurrence of chronic physical illness such as diabetes and cardiovascular disease with mental illness is well documented in terms of increased treatment complexity and more adverse outcomes.<sup>xiv</sup> Mental and emotional challenges often compromise medical care when it is provided, and adherence to treatment protocols is likely diminished as well. Psychological interventions also address the side effects of medications and ameliorate the potential for cognitive challenges and unhealthy lifestyle choices in order to improve overall physical and emotional wellbeing.

The existence of comorbid conditions complicates the decision-making involved in providing psychotherapy because it increases the number of different factors the psychologist, psychiatrist, clinical social worker, psychiatric/mental health APRN or other mental health care professional must take into consideration and necessitates more communication with other health care professionals about the patient's condition and progress.

Based on the 2008 APAPO survey data, psychologists are more likely to be treating patients who have chronic, comorbid physical disorders than they were ten years ago and therefore must have a greater awareness of how these disorders impact the patient's mental health. Examples of the work involved when treating patients suffering from diabetes, cardiovascular disease, and cancer with psychotherapy are provided below.

#### *Diabetes*

Research shows that depression is more prevalent in patients with diabetes than in the general population, and diabetic patients with depression are more than twice as likely to report self-care problems.<sup>xv</sup> Having diabetes and depression is also associated with a 1.3-fold increased

risk of death from all causes compared with people with only diabetes, a 2-fold increased risk of death from all causes compared to people with only depression and a 2.5-fold increased risk of death compared with people with neither diabetes nor depression.<sup>xvi xvii</sup>

A psychologist, psychiatrist, clinical social worker, psychiatric/mental health APRN or other mental health care professional providing psychotherapy to treat depression in a patient with diabetes must factor in the patient's level of cognitive functioning. Because cognitive changes associated with diabetes include impaired attention and processing speed the patient may have difficulty learning new information. To make an accurate diagnosis in the assessment phase, the psychologist, psychiatrist, clinical social worker, psychiatric/mental health APRN or other mental health care professional must take into consideration that mood symptoms may be a byproduct of the disease process or treatment for diabetes. When managing the patient's mood, the psychologist, psychiatrist, clinical social worker, psychiatric/mental health APRN or other mental health care professional incorporates the importance of integrating health-related self-care (e.g. taking medications, insulin, eating and sleeping properly, managing pain).

### *Cardiovascular (heart) disease*

Psychologists, psychiatrists, clinical social workers, psychiatric/mental health APRNs, and other mental health care professionals using psychotherapy to treat depression in patients with heart disease must consider more factors than if treating physically healthy patients. They also must communicate with other health care professionals, including patients' treating physicians, nurses, and cardiac rehabilitation specialists, about such issues as medication side effects and interactions, treatment adherence, and mental health progress. Depression predicts poor adherence to prescribed treatment for patients with many medical problems, including coronary artery disease, and non-adherence is associated with decreased survival for these patients.<sup>xviii</sup>

When evaluating the patient the psychologist, psychiatrist, clinical social worker, psychiatric/mental health APRN or other mental health care professional will have to consider a depressive syndrome frequently referred to as "vascular depression." Vascular depression is thought to be a direct result of damage to brain cells. Medications for heart problems can lower energy level, increase irritability, impede sexual functioning, and/or disrupt sleep, all of which are also symptoms of depression. The psychologist, psychiatrist, clinical social worker, psychiatric/mental health APRN, or other mental health care professional needs to decide whether the best approach is to start psychotherapy, refer for psychotropic medication, or, if the patient's somatic complaints warrant it, refer for medical assessment.<sup>xix</sup>

### *Cancer*

The process of dealing with the diagnosis and treatment of cancer represents one of the greatest medical and emotional challenges that many individuals will face. Research indicates that psychological services play an essential role in supporting patients', and their

families', journey from the time of diagnosis, through treatment, and at various outcome points (e.g., remission, recurrence, and end of life).<sup>xx</sup>

In concert with assessing multiple aspects of cancer patients' functioning, psychologists, psychiatrists, clinical social workers, psychiatric/mental health APRNs, and other mental health care professionals provide these patients with psychotherapy and other intervention services. Most typically, initial interventions will focus on several goals that require knowledge of medical aspects of cancer as well as psychological factors.

Collaborations with physicians can also be beneficial in situations where physicians engage the aid of psychologists, psychiatrists, clinical social workers, psychiatric/mental health APRNs, and other mental health care professionals in the delivery of distressing news. In many cases, immediate psychological interventions to address a patient's acute anxiety, anger, and distress can help bolster his/her ability to cope, and can help maintain a positive relationship between the physician and the patient.

### The importance of cultural competency

Due to the changing U.S. demographics, psychologists, psychiatrists, clinical social workers, psychiatric/mental health APRNs, and other mental health care professionals are increasingly encountering patients who differ from them in terms of race, ethnicity, and culture. Guidelines issued by APA in 2002 note that patients' worldviews and life experiences may affect how they present symptoms, the meaning that illness has in their lives, motivation and willingness to seek treatment, social support networks, and perseverance in treatment. In addition to educating themselves about their patients' experiences and cultural beliefs, psychologists need to examine the appropriateness of traditional interventions and when necessary, replace or supplement them with more culturally-specific strategies.<sup>xxi</sup>

Cultural competence is a relatively new construct to help psychologists, psychiatrists, clinical social workers, psychiatric/mental health APRNs, and other mental health care professionals improve service delivery by increasing their understanding of cultural factors. They must educate themselves about cultural differences and alter their techniques to accommodate such differences. To illustrate, one model used to explore patients' socio-cultural identities is the ADDRESSING framework. This extensive framework requires taking into account ten influences on patients: Age and generation, Developmental or acquired Disability, Religion and spirituality, Ethnicity, Socio-economic status, Sexual orientation, Indigenous heritage, National origin, and Gender.<sup>xxii</sup>

Reducing the stigma against mental health has made psychotherapy a viable option for many more people and in turn has led to greater diversity among the patient population. This heterogeneity increases the complexity and decision-making when providing psychotherapy services.

### **Increased Complexity in Data to Be Evaluated / Care to Be Managed**

Because psychologists, psychiatrists, clinical social workers, psychiatric/mental health APRNs, and other mental health care professionals are seeing more complex patients than

they did ten years ago, providing psychotherapy requires greater integration of more data about the patient. This is so in large part because they have more frequent interactions with physicians and other health care professionals. The work involved in providing psychotherapy services has changed due to the increasing number of patients who have severe disorders, comorbid conditions and/or are taking medication. As discussed under Physician / Mental Health Care Professional Time (immediately below), providing psychotherapy to complex patients requires more pre-and post-service work than it does in treating patients with fewer complicating factors.

### **Physician / Mental Health Care Professional Time**

As we have discussed under Knowledge / Technology on pages two and three, psychologists, psychiatrists, clinical social workers, psychiatric/mental health APRNs and other mental health care professionals now treat more patients with comorbid conditions. Providing psychotherapy services to patients with comorbid conditions is more time-consuming than it is for patients without comorbid conditions because of the additional information that must be gathered and shared. For example, before making recommendations about physical activities for a patient with diabetes safety issues based on the patient's problems with vision, mobility and pain must be considered. All of this adds to the pre-and post-service time that is spent talking with the patient's physician about the patient's compliance, needs, and progress.

A psychologist, psychiatrist, clinical social worker, psychiatric/mental health APRN or other mental health care professional treating patients with depression related to heart disease may also need to discuss the increased risk of exacerbating their heart disease, and assess patients for the presence of other risk factors, including obesity, a high-fat diet, smoking, and a sedentary lifestyle. In the inpatient setting, psychologists, psychiatrists, clinical social workers, psychiatric/mental health APRNs and other mental health care professionals work and communicate with a treatment team. In the outpatient setting, more time and effort may be needed to gather and provide information to physicians and other health care professionals treating the patient.

Consultation and communication with other health care professionals, occurring from the time of diagnosis and throughout treatment and follow-up, are essential components of psychological services provided to cancer patients. As part of providing psychotherapy services, psychologists often collaborate with physicians on decisions regarding psychotropic medications to address emotional distress. (S. Reid-Arndt, Ph.D., personal communication, October 8, 2009)

Psychologists providing psychotherapy to patients taking psychotropic medications also devote considerable time to communicating with physicians. In a study published in 2000, practicing psychologists on average estimated that 43% of their current patients were using psychotropic medications, 94% reported they had consulted with physicians about changing medications, and 87% indicated they had been involved in medication decision-making for some portion of their case load. The study involved one thousand licensed psychologists and had a response rate of 60%.<sup>xxiii</sup>

The likelihood of psychotherapy patients being on psychotropic medication is increasing over time. This is especially true for children and adolescents. According to a national study, the estimated number of outpatient office visits by children and adolescents that included antipsychotic medication soared between 1993 and 2002, increasing from 201,000 to over 1.2 million.<sup>xxiv</sup>

In the 2008 APAPO survey discussed on page two, 97% of the respondents said they are treating patients who are taking psychotropic medications and 69% reported that the number of patients taking such medications has increased from ten years ago. Fifty-four percent said they spend more patient time now discussing issues related to the efficacy of those medications.

### **Patient Population**

Fifty one percent of respondents in the APAPO survey indicated that the severity of patients' presenting problems has increased over the last ten years. Increased patient severity presents more complex circumstances when treating the patient and increases the stress and level of decision-making by the psychologist, psychiatrist, clinical social worker, psychiatric/mental health APRN or other mental health care professional.

Patient severity is related to several factors including comorbidity, aging, and use of psychotropic medication. A National Comorbidity Survey Replication found that 14% of the population surveyed between 2001 and 2003 had mental health disorders that were moderate to serious. Severity was strongly related to comorbidity as 25% of those with two diagnoses and almost 50% of those with three or more diagnoses were classified as severe.<sup>xxv</sup>

According to a report prepared for SAMHSA, individuals age 65 and older will comprise 20% of the country's population by the year 2030. There will be increased demand for mental health treatment as the number of older adults with mental disorders, including depression, anxiety, and dementia, grows from 7 to 15 million. Treatment for these individuals will be more complicated because mental disorders in older persons are associated with adverse outcomes such as poorer functioning, increased morbidity and mortality, and a higher risk of institutionalization.<sup>xxvi</sup>

While not all older adults will require the services of geriatric specialists, psychologists, psychiatrists, clinical social workers, psychiatric/mental health APRNs, and other mental health care professionals furnishing mental health services to seniors must have knowledge of aging-related issues such as development across the lifespan. Because many have little training in gerontology, they must educate themselves about the biological, social, and psychological aspects of aging, as well as the ethical and legal considerations involved in treating older adults.<sup>xxvii</sup>

## **Site-of-Service/Length of Hospital Stay**

The site of service for mental health treatment shifted dramatically between 1970 and 2000 as the number of psychiatric beds dropped by more than 60% while outpatient mental health care grew.<sup>xxviii</sup> From 1986 to 2003, inpatient spending on inpatient mental health treatment services fell from 41% of total mental health expenditures down to 24%. Conversely, spending on outpatient mental health services increased by 7.9% annually to physicians and 6% to non-physician mental health professionals.<sup>xxix</sup>

Data from the National Hospital Discharge Survey indicates that from 1995 through 2002 average lengths of stay for patients with mental illness decreased by almost 10 percent. Of those patients whose care involved serious mental illness, the stays decreased by 34.7%, or 12.8 days in 1995 compared to 9.7 days in 2002.<sup>xxx</sup> As a result, psychologists, psychiatrists, clinical social workers, psychiatric/mental health APRNs, and other mental health care professionals are now treating, on an outpatient basis, individuals with problems formerly severe enough to require hospitalization. When making decisions about psychotherapy for these patients, they must take into account the lack of structure and support that the patients would otherwise have received if placed in an inpatient facility.

## **II. Rank Order Anomalies**

While this letter focuses on the changes involving individual psychotherapy services it is essential that the codes for services such as group therapy, family therapy and medication management be included in the Five-Year Review to prevent rank-order anomalies within the family of codes. Because the untimed codes for these services contain work that is very similar in nature to the individual psychotherapy codes, failing to re-assess all of the codes risks creating rank-order anomalies across the family of codes.

We believe there is already an anomalous relationship between at least two of the codes. There may be others, and for this reason as well, the code values require reexamination. According to the RUC database<sup>xxxi</sup>, code 90806 is valued higher than 90845 even though their work is similar and the latter has 11 more minutes of total service time. Code 90806 is valued at 1.86 while 90845 is valued at only 1.79. Normally if two codes have similar work but one has more service time the code for the longer service is valued higher.

## **Lack of Relativity across Services**

The way the psychotherapy codes were valued in 1998 would likely not be acceptable to the RUC today because the basis for valuing the codes was not relative to other codes in the Resource-Based Relative Value Scale (RBRVS). Instead of being compared to other codes in the RBRVS, the final recommended work value of 1.30 for base code 90804 was derived from a blend of data including the 1.11 work value assigned by the former Health Care Financing Administration, the survey median value of 1.25, the regression analysis recommendation of 1.40, and a work neutrality adjustment.

Over time the RUC has increasingly looked for relativity in the process of valuing codes. In a comment letter to CMS about the proposed rule on the 2010 fee schedule, the RUC objects to the use of any methodology that ignores relativity under RBRVS.<sup>xxxii</sup> According to the letter, the RUC determines what is a reasonable code value after reviewing the survey data and making comparisons to other codes within the RBRVS. In contrast, the psychotherapy codes lack this relativity because they have not been compared to other codes within the RBRVS.

Including the psychotherapy codes as part of the Five-Year Review will ensure they are valued relative to other services in the Medicare fee schedule, thereby meeting the standard that the RUC now requires for other codes.

### **III. Evidence of Problematic Assumptions Made in Previous Valuation**

The majority of timed psychotherapy codes have not been reviewed since their initial valuation in 1998, and virtually all of the untimed codes have not been reviewed since 1995. As we have demonstrated, a substantial body of compelling evidence now exists to merit review of these codes.

It is well understood that the survey data used to initially establish the psychotherapy code values in 1998 was substantially flawed. A regression analysis was employed at that time to make the survey data usable for purposes of valuing the codes. Our organizations offered this regression and the RUC accepted it in order to value the codes.

In light of the timeliness for review, our organizations have recently reassessed the survey data and have reexamined the regression analysis employed in 1998. We find that the regression analysis contains assumptions about the survey data that merit reconsideration. In addition, we note that the RUC database contains some discrepancies regarding psychotherapy code valuation. According to information compiled from the RUC database, pre-and post-service time is identified for the codes reviewed by the RUC in 1995 but not for the codes reviewed in 1998 (See Attachment B). In view of the weak survey data, a questionable regression analysis, and RUC database discrepancies, psychotherapy work values in our opinion do not accurately reflect the services involved.

#### *Survey Data*

During the first Five-Year Review, CMS did not accept the RUC's recommendations for the existing psychotherapy codes but instead developed 24 new codes to better differentiate among various modalities for providing psychotherapy. CMS distinguished psychotherapy through four factors:

- whether E/M services are provided with psychotherapy,
- the approximate length of the psychotherapy session,
- the type of psychotherapy provided, and
- the setting in which the psychotherapy is provided.

In order to assign relative work values to the new codes, it was necessary to determine the incremental work values of these four factors. If an incremental value for each factor was established, then it would be possible to create a psychotherapy relative value scale among all the codes by adding the increments in a logical sequence to a base value.

The RUC subsequently surveyed a range of clinicians, practicing in various settings, on the 24 new codes. Psychiatry, Child Psychiatry, and ANA had their members survey all 24 codes. Members of APA and NASW surveyed only the 12 codes for psychotherapy without E/M.

At the April 1997 RUC meeting, the five organizations presented the RUC with a joint proposal based on the survey data from all health care professionals, employing a work neutral regression technique to eliminate inconsistencies among practice patterns. Even with the use of the regression technique the survey data was still unworkable. After reviewing the proposal the RUC could not reach a conclusion about values for the codes, in part because there was no type of rank order among the codes in the proposal. Following the RUC's suggestion, the five organizations contracted with The Lewin Group (Lewin) for assistance on the data collection and statistical analysis.

Lewin analyzed the survey results and found that the estimates of the four factors were not consistent across the codes. Differentials between the codes for the four factors (each differential being the difference between a given code's median RVU and the median RVU of the equivalent code without the factor) showed high variability across the codes. In some instances the differentials were negative, where for example the factor would have been expected to increase a value but instead decreased a value.

The survey data was substantially flawed, which Lewin attributed to several factors. First, practitioners surveyed appeared to misunderstand the logical associations among the codes. These codes, after all, were new to practitioners, who may have misunderstood their meaning in providing survey responses. In addition, differential practice patterns, variance in standards of care and diversity in patient populations appeared to have impacted survey responses.

### *Regression Analysis*

Lewin applied a correction to the regression technique to adjust for inconsistencies among practice patterns and to maintain budget neutrality, so that the Medicare program's payment allocated for the work values for the 24 new psychotherapy codes would not differ from payment under the previous psychotherapy codes. The RUC adopted Lewin's approach to compute the final work values, and this valuation is explained in the RUC database:

The base code is 90804, individual psychotherapy, insight oriented, behavior modifying and/or supportive, in an office or outpatient facility, approximately 20 to 30 minutes face-to-face with the patient. 90804 is currently valued by HCFA at 1.11 RVUs. The survey found a median work RVU of 1.25 and the regression analysis indicated a work RVU of 1.40. The work neutrality

analysis comparing the total pool of survey RVUs to the pool of regression derived RVUs showed that the base RVU from the regression should be reduced by 0.10 work RVUs to 1.30. Therefore, the organizations recommended and the RUC has accepted 1.30 work RVUs for 90804. This recommendation is further supported by the current HCFA RVU for 90805 of 1.47. The only difference between 90804 and 90805 is the provision of E/M. If the estimated work effect for E/M (0.17) is removed from 90805 the result is 1.30: the recommended work RVU for 90804.

The RUC's recommendation is for an acceptance of 1.30 work RVUs for 90804 as the base and the additive methodology derived from the regression analysis. The addition of the estimated work effect to the base code allows the creation of a consistent work scale across all 24 psychotherapy codes.

The intent of linear regression, and as employed by Lewin in this instance, is to model the relationship between a dependent variable, in this case the work RVU for 90804, and independent variables related to the four factors. As noted, our organizations fully accepted the Lewin analysis, which was necessary for the initial valuation of the new psychotherapy codes at the time. Our recent reexamination of the analysis reveals some shortcomings that merit review.

First, the linear regression analysis model employed by Lewin contained a limited number of predictor variables, namely the four factors identified above. For example, when applied to the codes for 45-50 and 75-80 minutes of outpatient psychotherapy, the regression analysis failed to consider the additional stress and intensity that occurs during longer psychotherapy sessions. Therefore, employing an increased number of factors could have provided for more accurate code values.

Second, linear regression models also assume that the data are normally distributed, that the variance of errors are equal across all levels of the independent variables, and that the relationship between the dependent and independent variables (here, the work value for 90804 and the four factors respectively) is linear in nature. Because these assumptions may not be correct in this case there may have been anomalies caused by the model that affected the values.

#### RUC Database Discrepancies Regarding Psychotherapy Code Valuation

The RUC database contains discrepancies in how the psychotherapy codes are valued. These discrepancies may have occurred when the original values were set in 1998. To illustrate, the intra-service times for all outpatient services show the *maximum* number of face-to-face minutes that are noted in the code descriptor while some of the inpatient codes reflect lesser amounts of time (See Attachment B). For example, code 90804 has 30 intra-service minutes for 20-30 minutes of outpatient psychotherapy but 90816 has only 28.5 minutes of intra-service time for 20-30 minutes of inpatient psychotherapy. This same discrepancy is found in the 75-80 minute psychotherapy with E/M codes with 90809 (outpatient) having 80 minutes of intra-service time while 90822 (inpatient) has 78.5 minutes of intra-service time.

## Conclusion

We believe that the services noted above warrant inclusion in the upcoming Five-Year Review because (1) the work involved in providing psychotherapy has become more complex since the last time these codes were reviewed, (2) reviewing all of the codes will address existing and potential rank-order anomalies, and (3) weak survey data led to inaccurate code values in the previous valuation of the psychotherapy services.

We urge CMS to include the psychotherapy codes in the 2010 Five-Year Review. If there are any questions regarding this request please contact APA's Director of Regulatory Affairs, Diane M. Pedulla, J.D., by telephone at 202-336-5889 or by email at [dpedulla@apa.org](mailto:dpedulla@apa.org).

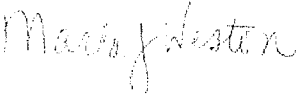

Sincerely,

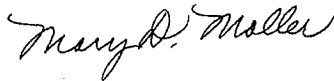

Katherine C. Nordal, PhD

90802 Interactive psychiatric diagnostic interview examination using play equipment, physical devices, language interpreter, or other mechanisms of communication

### Psychiatric Therapeutic Procedures

#### *Office or Outpatient Facility*

90804 Individual psychotherapy, insight oriented, behavior modifying and/or supportive, in an office or outpatient facility, approximately 20 to 30 minutes face-to-face with the patient;

90806 Individual psychotherapy, insight oriented, behavior modifying and/or supportive, in an office or outpatient facility, approximately 45 to 50 minutes face-to-face with the patient;

90808 Individual psychotherapy, insight oriented, behavior modifying and/or supportive, in an office or outpatient facility, approximately 75 to 80 minutes face-to-face with the patient;

90810 Individual psychotherapy, interactive, using play equipment, physical devices, language interpreter, or other mechanisms of non-verbal communication, in an office or outpatient facility, approximately 20 to 30 minutes face-to-face with the patient;

90812 Individual psychotherapy, interactive, using play equipment, physical devices, language interpreter, or other mechanisms of non-verbal communication, in an office or outpatient facility, approximately 45 to 50 minutes face-to-face with the patient;

90814 Individual psychotherapy, interactive, using play equipment, physical devices, language interpreter, or other mechanisms of non-verbal communication, in an office or outpatient facility, approximately 75 to 80 minutes face-to-face with the patient;

#### *Inpatient Hospital, Partial Hospital or Residential Care Facility*

90816 Individual psychotherapy, insight oriented, behavior modifying and/or supportive, in an inpatient hospital, partial hospital or residential care setting, approximately 20 to 30 minutes face-to-face with the patient;

- 90818 Individual psychotherapy, insight oriented, behavior modifying and/or supportive, in an inpatient hospital, partial hospital or residential care setting, approximately 45 to 50 minutes face-to-face with the patient;
- 90821 Individual psychotherapy, insight oriented, behavior modifying and/or supportive, in an inpatient hospital, partial hospital or residential care setting, approximately 75 to 80 minutes face-to-face with the patient;
- 90823 Individual psychotherapy, interactive, using play equipment, physical devices, language interpreter, or other mechanisms of non-verbal communication, in an inpatient hospital, partial hospital or residential care setting, approximately 20 to 30 minutes face-to-face with the patient;
- 90826 Individual psychotherapy, interactive, using play equipment, physical devices, language interpreter, or other mechanisms of non-verbal communication, in an inpatient hospital, partial hospital or residential care setting, approximately 45 to 50 minutes face-to-face with the patient;
- 90828 Individual psychotherapy, interactive, using play equipment, physical devices, language interpreter, or other mechanisms of non-verbal communication, in an inpatient hospital, partial hospital or residential care setting, approximately 75 to 80 minutes face-to-face with the patient;

#### Other Psychotherapy

- 90845 Psychoanalysis
- 90846 Family psychotherapy (without the patient present)
- 90847 Family psychotherapy (conjoint psychotherapy) (with patient present)
- 90849 Multiple-family group psychotherapy
- 90853 Group psychotherapy (other than of a multiple-family group)
- 90857 Interactive group psychotherapy

#### Other Psychiatric Services or Procedures

- 90875 Individual psychophysiological therapy incorporating biofeedback training by any modality (face-to-face with the patient), with psychotherapy (e.g., insight oriented, behavior modifying or supportive psychotherapy); approximately 20-30 minutes

90876 Individual psychophysiological therapy incorporating biofeedback training by any modality (face-to-face with the patient), with psychotherapy (e.g., insight oriented, behavior modifying or supportive psychotherapy); approximately 45-50 minutes

90880 Hypnotherapy

Chicago IL 60611

Subject: Analysis of Closed Fracture Without Manipulation Treatment Codes

Dear Dr. Larimore:

The American Academy of Orthopaedic Surgeons (AAOS) is writing in regards to the recent request from the RUC Relativity Assessment Workgroup to review all existing closed fracture without manipulation treatment codes to determine whether patient positioning time had been included in the valuation of the services.

This request was based on a comment from the Centers for Medicare and Medicaid Services (CMS) in their Five-Year Review Proposed Rule, published in the *Federal Register* on June 6, 2011. CMS wrote, “Additionally, we recommend that the AMA RUC examine all of the non-manipulation fracture codes to determine if positioning time was incorporated into the work RVU for the codes and, if so, whether the need for positioning time was documented.”

In response to the Workgroup’s request, the AAOS reviewed the pre-service data for all 50 closed fracture without manipulation treatment codes in the CPT manual. Most of these codes are performed regularly by orthopaedic surgeons, although some are rarely performed by orthopaedic surgeons (eg, 21310, *Closed treatment of nasal bone fracture without manipulation*). Of these 50 codes, only five have been reviewed by the RUC. The table below shows the relevant pre-time data for these five codes.

| RUC review | CPT          | LONG DESC                                                                                                                                                                                    | eval | posit | s,d,w |
|------------|--------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|-------|-------|
| 2005       | <b>26600</b> | Closed treatment of metacarpal fracture, single; without manipulation, each bone                                                                                                             | 7    | 2     | 0     |
| 2007       | <b>27267</b> | Closed treatment of femoral fracture, proximal end, head; without manipulation                                                                                                               | 7    | 2     | 0     |
| 2007       | <b>27767</b> | Closed treatment of posterior malleolus fracture; without manipulation                                                                                                                       | 0    | 5     | 0     |
| 2010       | <b>25600</b> | Closed treatment of distal radial fracture (eg, Colles or Smith type) or epiphyseal separation, includes closed treatment of fracture of ulnar styloid, when performed; without manipulation | 5    | 2     | 0     |
| 2010       | <b>27530</b> | Closed treatment of tibial fracture, proximal (plateau); without manipulation                                                                                                                | 7    | 2     | 0     |

Pre-service times for 26600 are based on survey median times as there were no pre-time packages in 2005. The service description includes “assist with extremity positioning” in the pre-service description.

Pre-service times for 27267 are based cross-walk to code 26600 as there were no pre-time packages in 2007 and the survey data was flawed because of the survey instrument asked for skin-to-skin time instead of manipulation time. This resulted in respondents putting manipulation time into the pre and post-service categories.

Pre-service times for 27767 are based on survey median times as there were no pre-time packages in 2007. The service description includes positioning the patient.

Pre-service times for 25600 are based on pre-time package 5 with 2 minutes subtracted to account for typical E/M service and 2 minutes added for patient positioning. The service description includes “assist with extremity positioning” in the pre-service description.

Pre-service times for 27530 are based on pre-time package 5 with 2 minutes added for patient positioning. The service description includes “assist with extremity positioning” in the pre-service description.

None of the 45 Harvard-based codes includes positioning time. The Harvard study rarely included time for positioning – and only for extraordinary positioning. Of the remaining Harvard-based codes with a global period, approximately 10% have positioning time, and those are complex 90-day inpatient only codes.

For all five codes, the RUC recommended work RVUs were based on magnitude estimation of total work and comparison to other similar procedures. None of the work RVUs for these five codes were developed using a building block method.

Thank you for allowing us to provide this information.

Sincerely,

A handwritten signature in blue ink, appearing to read "W. Creevy", followed by a period.

**Subject: Additional HCPAC Recommendations for Consideration for Final Rule on the 2012 Medicare Physician Payment Schedule**

The American Medical Association (AMA) Health Care Professionals Advisory Committee (HCPAC) Review Board met September 22, 2011 to review specialty society data and develop relative value recommendations for individual services. Given the immediate urgency for items related to 2012, we are submitting these recommendations at this time. The HCPAC submission includes an update on review of the Multi-Specialty Points of Comparison Codes issues for consideration by the Centers for Medicare and Medicaid Services (CMS).

In the *Final Rule* for the 2011 Medicare Physician Payment Schedule, CMS requested that the RUC and HCPAC review high volume services included on the RUC's Multi-Specialty Points of Comparison (MPC). The RUC has engaged in a more comprehensive review of the MPC List, reconstructing the document to ensure that it includes true cross-specialty services. Four specific codes identified by CMS were scheduled for review at the September 2011 HCPAC meeting, with specialty society data submitted. The HCPAC recommendation for CPT code 11056 *Paring or cutting of benign hyperkeratotic lesion (eg, corn or callus); 2 to 4 lesions* is attached. Additionally, the HCPAC reviewed three *Debridement of Nail Services*, CPT codes 11719-11721, and recommends that 11719 be re-surveyed for January 2012 and that the recommendations for 11720 and 11721 be considered interim until the January 2012 HCPAC meeting, where they will be reviewed again to ensure rank order with the new survey data and recommendations for 11719.

The HCPAC appreciates the opportunity to provide recommendations related to the 2012 Medicare Physician Payment Schedule. If you have any questions regarding this submission. Please contact Susan Clark (202) 789-7495 or [Susan.Clark@ama-assn.org](mailto:Susan.Clark@ama-assn.org) at the AMA for clarification regarding these recommendations.

Sincerely,

Arthur Traugott, MD  
HCPAC Chair

Anthony Hamm, DC  
HCPAC Co-Chair

AMA/Health Care Professionals Advisory Committee Review Board  
Summary of Recommendations  
*MPC List Screen*

September 2011

**Debridement of Nail**

CPT code 11721 *Debridement of nail(s) by any method(s); 6 or more* was identified by CMS as part of the MPC List screen. In February 2011, the RUC recommended 11721 be resurveyed as it had not been reviewed in the last 6 years, and that the family of services, CPT codes 11719 and 11720, be resurveyed as well.

**11719 *Trimming of nondystrophic nails, any number***

The HCPAC reviewed the survey data for CPT code 11719 *Trimming of nondystrophic nails, any number*. The specialty society indicated that they would benefit from re-surveying this code as they agreed that the survey data was not reflective of the service. **The specialty society will re-survey CPT code 11719 for the January 2012 HCPAC Meeting. The HCPAC recommended values for 11720 and 11721 will be interim so that they can be reviewed with 11719 to ensure appropriate relativity within the family.**

**11720 *Debridement of nail(s) by any method(s); 1 to 5.***

The HCPAC reviewed the survey data for CPT code 11720 and agreed it accurately reflected the service. The specialty society discussed the proposed valuation for the service and agreed that although the survey indicated a 25<sup>th</sup> percentile of 0.35 work RVUs, the specialty society did not have any compelling evidence to change the current value of the code. Therefore, the HCPAC agreed with the specialty society that the survey data supports the current value, 0.32 RVUs. The HCPAC compared the surveyed code to reference code 99212 *Office or other outpatient visit for the evaluation and management of an established patient* (work RVU=0.48). The HCPAC noted that the intra-service time for the surveyed code is less than the reference code, 5 minutes and 10 minutes, respectively. Further, the HCPAC noted that the reference code overall is a more intense service to perform in comparison to the surveyed code. **Therefore, based on this comparison to the reference code, the HCPAC recommends 0.32 work RVUs, the current work RVU for CPT code 11720.**

**11721 *Debridement of nail(s) by any method(s); 6 or more.***

The HCPAC reviewed the survey data for CPT code 11721 and agreed it accurately reflected the service. The specialty society discussed the proposed valuation for the service and agreed that although the survey indicated a median value of 0.65 work RVUs, the specialty society did not have any compelling evidence to change the current value of the code. Therefore, the HCPAC agreed with the specialty society that the survey data supports the current value, 0.54 RVUs. The HCPAC compared the surveyed code to reference code 99212 *Office or other outpatient visit for*

*the evaluation and management of an established patient*, (work RVU=0.48). The HCPAC noted that the total-service time for the surveyed code is more than the reference code, 19 minutes and 16 minutes, respectively. Further, the HCPAC noted that the surveyed code requires more physical effort to perform in comparison to the surveyed code. **Therefore, based on this comparison to the reference code, the HCPAC recommends 0.54 work RVUs, the current work RVU for CPT code 11721.**

CPT Descriptor: Debridement of nail(s) by any method(s); 1 to 5

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 67-year-old female presents with four painful toenails. The problem began to develop 10 years ago and has progressively worsened so that these nails are thickened, dystrophic, and painful. There is yellowish discoloration of each deformed nail plate with subungual debris. The patient has difficulty wearing normal shoes and walking. Four nails are debrided.

Percentage of Survey Respondents who found Vignette to be Typical: 90%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: The chart is reviewed with general medical and surgical history update including current medications and allergies. Physical examination is performed. The physician discusses the procedure with the patient and verifies that all required instruments and supplies are available in the treatment room. The patient is positioned and the foot is prepped.

Description of Intra-Service Work: Using a combination of surgical hand instruments and power rotating burr, the nails are débrided to reduce the size and girth of the abnormal nail plates, short of avulsion.

Description of Post-Service Work: Application of the appropriate topical medication and dressing as necessary. Instruct patient and/or care giver on appropriate home care. Discuss future management of the condition. Instruct on proper selection and sizing of footwear. Instruct on importance of controlling concomitant medical conditions. Complete medical record; Communicate with primary care physician

**Modifier -51 Exempt Status**

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

**New Technology/Service:**

Is this new/revised procedure considered to be a new technology or service? No

**KEY REFERENCE SERVICE:**

|                     |               |                 |                    |
|---------------------|---------------|-----------------|--------------------|
| <u>Key CPT Code</u> | <u>Global</u> | <u>Work RVU</u> | <u>Time Source</u> |
| 99212               | XXX           | 0.48            | RUC Time           |

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A problem focused history; A problem focused examination; Straightforward medical decision making. Usually, the presenting problem(s) are self limited or minor. Physicians typically spend 10 minutes face-to-face with the patient and/or family.

**KEY MPC COMPARISON CODES:**

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The RUC recommended that 11720 be surveyed as a family code when CPT 11721 was identified by the MPC List screen. Code 11720 was last reviewed in 1997 when codes 11700 (*Debridement of nails, manual; five or less*) (RVW=0.32) and 11710 (*Debridement of nails, electric grinder; five or less*) (RVW=0.32) were deleted. The RUC recommended the survey

median work RVU of 0.45 to account for the fact that an E/M was not typically performed with this service. CMS rejected this recommendation based on the fact that these were new and revised codes, the work had not changed, and the deleted codes were not presented for refinement or review during the 1995 Five-Year-Review process. CMS assigned the work RVU of 0.32 for 11720.

The APMA conducted a RUC survey and received 30 surveys. The work performing this service has not changed. The current survey data updates the procedure time and takes into account that an E/M is not typically reported with this service. **The APMA recommends maintaining the current work RVU of 0.32 for 11720.**

Code 11720 is not typically billed with an E/M service. Pre-time package 5 (Procedure without sedation/anesthesia care) is appropriate with 5 minutes for evaluation and 2 minutes for positioning and preparing the foot for the procedure.

Code 99212 was chosen as the key reference. The complexity/intensity measures above correctly indicate that 99212 requires more mental effort and judgment in comparison to 11720. Overall pre/intra/post intensity/complexity measures are slightly greater for 99212. Because an E/M is not typically billed with 11720, the work for this service includes necessary evaluation work for patients who are typically compromised.

|         | CPT   | DESC                                            | STAT | GLOB | RVW  | Total Time | eval | posit | s,d,w | INTRA | sd-im |
|---------|-------|-------------------------------------------------|------|------|------|------------|------|-------|-------|-------|-------|
| Key Ref | 99212 | Office/outpatient visit, established            | A    | XXX  | 0.48 | 16         | 2    |       |       | 10    | 4     |
|         | 11720 | Debridement of nail(s) by any method(s); 1 to 5 | A    | 000  | 0.32 | 14         | 5    | 2     |       | 5     | 2     |

Code 11720 is also appropriately placed relative to MPC codes 71020 and 95900.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☒ Other reason (please explain) Other foot care services may be reported in addition to 11056, however, there is no single typical code reported.

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

**FREQUENCY INFORMATION**

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 11720

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty podiatry                      How often? Commonly

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national frequency not available

CPT Descriptor: Debridement of nail(s) by any method(s); 6 or more

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 67-year-old female presents with eight painful toenails. The problem began to develop 10 years ago and has progressively worsened so that these nails are thickened, dystrophic, and painful. There is yellowish discoloration of each deformed nail plate with subungual debris. The patient has difficulty wearing normal shoes and walking. Eight nails are debrided.

Percentage of Survey Respondents who found Vignette to be Typical: 90%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: The chart is reviewed with general medical and surgical history update including current medications and allergies. Physical examination is performed. The physician discusses the procedure with the patient and verifies that all required instruments and supplies are available in the treatment room. The patient is positioned and the foot is prepped.

Description of Intra-Service Work: Using a combination of surgical hand instruments and power rotating burr the nails are débrided to reduce the size and girth of the abnormal nail plates, short of avulsion.

Description of Post-Service Work: Application of the appropriate topical medication and dressing as necessary. Instruct patient and/or care giver on appropriate home care. Discuss future management of the condition. Instruct on proper selection and sizing of footwear. Instruct on importance of controlling concomitant medical conditions. Complete medical record; Communicate with primary care physician

**Modifier -51 Exempt Status**

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

**New Technology/Service:**

Is this new/revised procedure considered to be a new technology or service? No

**KEY REFERENCE SERVICE:**

| <u>Key CPT Code</u> | <u>Global</u> | <u>Work RVU</u> | <u>Time Source</u> |
|---------------------|---------------|-----------------|--------------------|
| 99212               | XXX           | 0.48            | RUC Time           |

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A problem focused history; A problem focused examination; Straightforward medical decision making. Usually, the presenting problem(s) are self limited or minor. Physicians typically spend 10 minutes face-to-face with the patient and/or family.

**KEY MPC COMPARISON CODES:**

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

| <u>MPC CPT Code 1</u> | <u>Global</u> | <u>Work RVU</u> | <u>Time Source</u> | <u>Most Recent Medicare Utilization</u> |
|-----------------------|---------------|-----------------|--------------------|-----------------------------------------|
| 92083                 | XXX           | 0.50            | RUC Time           | 2,651,934                               |

CPT Descriptor 1 Visual field examination, unilateral or bilateral, with interpretation and report; extended examination (eg, Goldmann visual fields with at least 3 isopters plotted and static determination within the central 30 degrees, or quantitative, automated threshold perimetry, Octopus program G-1, 32 or 42, Humphrey visual field analyzer full threshold programs 30-2, 24-2, or 30/60-2)

| <u>MPC CPT Code 2</u> | <u>Global</u> | <u>Work RVU</u> | <u>Time Source</u> | <u>Most Recent Medicare Utilization</u> |
|-----------------------|---------------|-----------------|--------------------|-----------------------------------------|
| 11000                 | 000           | 0.60            | RUC Time           | 105,397                                 |

CPT Descriptor 2 Debridement of extensive eczematous or infected skin; up to 10% of body surface

| <u>Other Reference CPT Code</u> | <u>Global</u> | <u>Work RVU</u> | <u>Time Source</u> |
|---------------------------------|---------------|-----------------|--------------------|
| 99213                           | XXX           | 0.97            | RUC Time           |

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: An expanded problem focused history; An expanded problem focused examination; Medical decision making of low complexity. Counseling and coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of low to moderate severity. Physicians typically spend 15 minutes face-to-face with the patient and/or family.

**RELATIONSHIP OF CODE BEING REVIEWED TO KEY REFERENCE SERVICE(S):**

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by the mean) of the service you are rating to the key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Key Reference Code: 6      % of respondents: 20.0 %

## Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

CPT 11721 was identified by the MPC List screen. Code 11721 was last reviewed in 1997 when codes 11701 (*Debridement of nails, manual; each additional, five or less*) (RVW=0.23, ZZZ global) and 11711 (*Debridement of nails, electric grinder; each additional, five or less*) (RVW=0.20, ZZZ global) were deleted and the new code 11721 with a 0-day global was created. The RUC recommended the survey median work RVU of 0.60 to account for the fact that the new code bundled the primary and add-on codes (11700-11711) into a stand-alone code (11721). The RUC also considered that an E/M was not typically performed with this service. CMS rejected this recommendation based on the fact that these were new and revised codes, the work had not changed, and the deleted codes were not presented for refinement or review during the 1995 Five-Year-Review process. CMS assigned a work RVU of 0.54, which was a weighted average of the sum of the work RVUs of the codes used to report the debridement of six or more nails in the past.

The APMA conducted a RUC survey and received 30 surveys. The work performing this service has not changed. The current survey data updates the procedure time and takes into account that an E/M is not typically reported with this service. **The APMA recommends maintaining the current work RVU of 0.54 for 11721.**

Code 11721 is not typically billed with an E/M service. Pre-time package 5 (Procedure without sedation/anesthesia care) is appropriate with 5 minutes for evaluation and 2 minutes for positioning and preparing the foot for the procedure.

Code 99212 and 99213 were chosen equally by the respondents. Because an E/M is not typically billed with 11721, the work for this service includes necessary evaluation work for patients who are typically compromised. The recommended work RVU of 0.54 fits well between these two reference codes.

|     | CPT   | DESC                                               | STAT | GLOB | RVW  | Total Time | eval | posit | s,d,w | INTRA | sd-im |
|-----|-------|----------------------------------------------------|------|------|------|------------|------|-------|-------|-------|-------|
| REF | 99212 | Office/outpatient visit, established               | A    | XXX  | 0.48 | 16         | 2    |       |       | 10    | 4     |
|     | 11721 | Debridement of nail(s) by any method(s); 6 or more | A    | 000  | 0.54 | 19         | 5    | 2     |       | 10    | 2     |

## SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.

☒ Other reason (please explain) Other foot care services may be reported in addition to 11056, however, there is no single typical code reported.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 11721

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty podiatry                      How often? Commonly

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national frequency not available

AMA/Health Care Professionals Advisory Committee  
Summary of Recommendations  
*MPC List Screen*

September 2011

**Trim Skin Lesions**

CPT code 11056 *Paring or cutting of benign hyperkeratotic lesion (eg, corn or callus); 2 to 4 lesions* was identified by CMS as part of the MPC List Screen. In February 2011, the RUC recommended this service be resurveyed as it had not been reviewed in the last 6 years.

The HCPAC reviewed the survey data for CPT code 11056 and agreed with the specialty society that it accurately reflected the service. The specialty society discussed the proposed valuation for the service, 0.61, the current value. The HCPAC expressed concern that this value was not appropriate and recommends the survey 25<sup>th</sup> percentile, a decrease to the existing value, 0.50 work RVUs. After a lengthy discussion, the HCPAC compared the surveyed code to reference code 99212 *Office or other outpatient visit for the evaluation and management of an established patient*, (work RVU=0.48). The HCPAC noted that the intra-service times for these services are the same (10 minutes). Further, the HCPAC noted that these services require similar work to perform. In addition, the HCPAC compared the surveyed code to 29580 *Strapping; Unna boot* (work RVU=0.55). The HCPAC noted that the surveyed code has less total-service time as compared to the reference code, 19 minutes and 27 minutes, respectively. **Therefore, based on this comparison to the reference code, the HCPAC recommends 0.50 work RVUs, the survey 25<sup>th</sup> percentile, for CPT code 11056.**

CPT Descriptor: Paring or cutting of benign hyperkeratotic lesion (eg, corn or callus); 2 to 4 lesions

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 69-year-old rheumatoid arthritic diabetic female presents with chronic recurring hyperkeratotic lesions on the dorsolateral aspect of both 5th toes and a hyperkeratotic lesion beneath her 2nd metatarsal head on her right foot. The patient has unsuccessfully self-treated the lesions with an emery board and over-the-counter foot remedies. The hyperkeratotic lesions are pared, and 1/8th inch felt aperture pads are cut and applied to the toes, and a 1/4 inch felt aperture pad is applied to the bottom of the right foot.

Percentage of Survey Respondents who found Vignette to be Typical: 94%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

**Moderate Sedation**

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No

Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No

Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: The chart is reviewed with general medical and surgical history update including current medications and allergies. Physical examination is performed. The physician discusses the procedure with the patient and verifies that all required instruments and supplies are available in the treatment room. The patient is positioned and the foot is prepped.

Description of Intra-Service Work: Inspect and palpate lesion for size, location, functional risks, depth; Pare lesion; Apply antiseptic to skin; Determine type of padding and specific material needed to shield the toe; Cut pad to fit toe and properly remove pressure point

Description of Post-Service Work: Instruct patient and/or care giver on appropriate home care. Discuss future management of the condition. Instruct on proper selection and sizing of footwear. Instruct on importance of controlling concomitant medical conditions. Complete medical record; Communicate with primary care physician

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

CPT 11056 was identified by the MPC List screen. This code was last reviewed in 1997 when code 11051 (*Paring or curettement of benign hyperkeratotic skin lesion with or without chemical cauterization (such as verrucae or clavi) not extending through the stratum corneum (eg, callus or wart) with or without local anesthesia; two to four lesions*) (RVW = 0.66) was deleted.

The APMA conducted a RUC survey and received 31 surveys. The work performing this service has not changed. The current survey data updates the procedure time and takes into account that an E/M is not typically reported with this service.

Code 11056 is not typically billed with an E/M service. Pre-time package 5 (Procedure without sedation/anesthesia care) is appropriate with 5 minutes for evaluation and 2 minutes for positioning and preparing the foot for the procedure.

Code 11042 was chosen as the key reference. Our consensus committee believes the recommended RVW and times for 11056 are appropriately less than 11042.

|                | CPT          | DESC                                                                                                   | STAT | GLOB | RVW         | Total Time | eval | posit | s,d,w | INTRA | sd-im |
|----------------|--------------|--------------------------------------------------------------------------------------------------------|------|------|-------------|------------|------|-------|-------|-------|-------|
| <b>Key Ref</b> | <b>11042</b> | Debridement, subcutaneous tissue (includes epidermis and dermis, if performed); first 20 sq cm or less | A    | 000  | <b>0.80</b> | 36         | 9    | 1     | 1     | 15    | 10    |
|                | <b>11056</b> | Paring or cutting of benign hyperkeratotic lesion (eg, corn or callus); 2 to 4 lesions                 | R    | 000  | <b>0.50</b> | 19         | 5    | 2     |       | 10    | 2     |

Code 11056 is also appropriately placed relative to MPC codes 11000 and 65205.

|            | CPT          | DESC                                                                                   | STAT | GLOB | RVW         | Total Time | eval | posit | s,d,w | INTRA | sd-im |

## SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☒ Other reason (please explain) Other foot care services may be reported in addition to 11056, however, there is no single typical code reported.

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

**FREQUENCY INFORMATION**

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 11056

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty podiatry                      How often? Commonly

Specialty                      How often?

Specialty                      How often?

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national frequency not available
