^a Two of the expense subcategories used to calculate this result required high amounts of imputation and had fewer than 20 observations upon which to base the specialty mean for imputation.

^b Three or more of the expense subcategories used to calculate this result required high amounts of imputation and had fewer than 20 observations upon which to base the specialty mean for imputation.

^c This result is based on data that required a high amount of imputation and had fewer than 20 observations upon which to base the specialty mean for imputation.
