

# CPT<sup>®</sup> Category I New Vaccine Codes (Including Incorporation of ACIP Abbreviations Listing) Long Descriptors

## Most recent changes to the CPT<sup>®</sup> Category I New Vaccine Codes Long Descriptor document

- Addition of 1 Category 1 code (0083A) accepted by the CPT Editorial Panel. Code 0083A and all related references will be published in CPT 2023. Guidelines and parenthetical notes are only effective for codes that have received FDA Emergency Use Authorization (EUA) approval.
- Updated effective date for code 0074A.
- Add the term “patient age” to the guidelines in the Medicine Immunization Administration for Vaccines/Toxoids section.

It is important to note that further CPT Editorial Panel or Executive Committee actions may affect these codes and/or descriptors. For this reason, code numbers and/or descriptor language in the CPT code set may differ at the time of publication. In addition, further Panel actions may result in gaps in code number sequencing.

The following Vaccine codes were accepted at the September 2021 CPT Editorial Panel meeting for the 2023 CPT production cycle. These codes are effective on July 1, 2022 following the six-month implementation period which begins January 1, 2022.  
\*Note code 90584 will follow 90586.

Each administration code is specific to each individual vaccine product (eg, 91300-<del>91311, 91310, 91301, 91302, 91303, 91304, 91305, 91306, 91307, 91308, 91309</del>), the dosage schedule (eg, first dose, second dose), and counseling, when performed. The appropriate administration code is chosen based on the type of vaccine and the specific dose number the patient receives in the schedule. For example, 0012A is reported for the second dose of vaccine 91301. Do not report 90460-90474 for the administration of SARS-CoV-2 (coronavirus disease [COVID-19]) vaccines. Codes related to SARS-CoV-2 (coronavirus disease [COVID-19]) vaccine administration are listed in Appendix Q, with their associated vaccine code descriptors, vaccine administration codes, <u>patient age</u>, vaccine manufacturer, vaccine name(s), National Drug Code (NDC) Labeler Product ID, and interval between doses. In order to report these codes, the vaccine must fulfill the code descriptor and must be the vaccine represented by the manufacturer and vaccine name listed in Appendix Q. ◀</p> <p>If a significant separately identifiable Evaluation and Management service (eg, new or established patient office or other outpatient services [99202-99215], office or other outpatient consultations [99241-99245], emergency department services [99281-99285], preventive medicine services [99381-99429]) is performed, the appropriate E/M service code should be reported in addition to the vaccine and toxoid administration codes.</p> <p>A component refers to all antigens in a vaccine that prevent disease(s) caused by one organism (90460 and 90461). Multi-valent antigens or multiple serotypes of antigens against a single organism are considered a single component of vaccines. 	<p><b>Vaccines, Toxoids</b></p> <p>To assist users to report the most recent new or revised vaccine product codes, the American Medical Association (AMA) currently uses the CPT website, which features updates of CPT Editorial Panel actions regarding these products. Once approved by the CPT Editorial Panel, these codes will be made available for release on a semiannual (twice a year: July 1 and January 1) basis. As part of the electronic distribution, there is a six-month implementation period from the initial release date (ie, codes released on January 1 are eligible for use on July 1 and codes released on July 1 are eligible for use January 1).</p> <p>The CPT Editorial Panel, in recognition of the public health interest in vaccine products, has chosen to publish new vaccine product codes prior to approval by the US Food and Drug Administration (FDA). These codes are indicated with the ✎ symbol and will be tracked by the AMA to monitor FDA approval status. Once the FDA status changes to approval, the ✎ symbol will be removed. ## CPT<sup>®</sup> Category I New Vaccine Codes (Including Incorporation of ACIP Abbreviations Listing) Long Descriptors

	<p>The “when administered to” age descriptions included in CPT vaccine codes are not intended to identify a product’s licensed age indication. The term “preservative free” includes use for vaccines that contain no preservative and vaccines that contain trace amounts of preservative agents that are not present in a sufficient concentration for the purpose of preserving the final vaccine formulation. The absence of a designation regarding a preservative does not necessarily indicate the presence or absence of preservative in the vaccine. Refer to the product’s prescribing information (PI) for the licensed age indication before administering vaccine to a patient.</p> <p>Separate codes are available for combination vaccines (eg, Hib-HepB, DTap-IPV/Hib). It is inappropriate to code each component of a combination vaccine separately. If a specific vaccine code is not available, the unlisted procedure code should be reported, until a new code becomes available.</p> <p>► The vaccine/toxoid abbreviations listed in codes 90476-90759, 91300-<del>91311</del><del>91310</del>, <del>91301</del>, <del>91302</del>, <del>91303</del>, <del>91304</del>, <del>91305</del>, <del>91306</del>, <del>91307</del>, <del>91308</del>, <del>91309</del> reflect the most recent US vaccine abbreviation references used in the Advisory Committee on Immunization Practices (ACIP) recommendations at the time of CPT code set publication. Interim updates to vaccine code descriptors will be made following abbreviation approval by the ACIP on a timely basis via the AMA CPT website (<a href="http://ama-assn.org/cpt-cat-i-vaccine-codes">ama-assn.org/cpt-cat-i-vaccine-codes</a>). The accuracy of the ACIP vaccine abbreviation designations in the CPT code set does not affect the validity of the vaccine code and its reporting function.</p> <p><u>For the purposes of severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (coronavirus disease [COVID-19]) vaccinations, codes 0003A, 0013A, 0053A, 0073A, and 0083A represent the administration of a third dose when the initial immune response following a two-dose primary vaccine series is likely to be insufficient (eg, immunocompromised patient).
