

Streamline Physician Credentialing

VeriCre™ is a credentialing solution developed by the American Medical Association (AMA). VeriCre can help you:

- Receive physician applications pre-populated with verified AMA data
- Evaluate data instead of chasing it
- Avoid redundancy for physicians, hospitals and health plans

ACCESSIBLE

VeriCre is digitally accessible to medical staff professionals and physicians through existing credentialing software platforms.

ACCURATE

Pre-filled verified data fields help maintain the accuracy of credentialing data.

CONVENIENT

VeriCre provides pre-populated, primary source data and credentialing documentation that physicians can securely access in one convenient location.

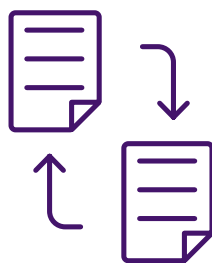

EFFICIENT

VeriCre provides AMA verified primary source data in the application, streamlining the credentialing process to redirect time spent chasing data towards ensuring quality patient care.

Works with your existing credentialing software

VeriCre integrates into third-party credentialing software, allowing verified data and credentialing documentation to be shared seamlessly and securely. Ask your software provider about integrating today.

More accurate data and improved credentialing efficiency

VeriCre allows physicians the opportunity to review pre-populated data, helping to ensure that the application provided is accurate, complete and consistent. By addressing redundancy, our solution helps reduce inefficiency in the credentialing process.

Redirect more time to patient care

By starting applications with pre-filled AMA data, credentialing becomes more efficient. Physicians are able to focus on what they do best, caring for patients. Medical staff professionals can focus on enabling patient safety.
